You stated formerly to the Commissioners that there were certain questions which might be raised, as to the *property* of the different articles in the Museum. There is, first, a question which applies to a very considerable part of the Collection, which, you have stated to the Committee, might arise from the manner in which it was purchased: will you be so good as to explain that?—That collection was purchased at Paris and London by the Professors, for £3,000; that money was borrowed from the Banks, and half-a-dozen or a dozen of the Senatus Academicus put their names to the bond; they are answerable for this money—the interest of it is paid annually from the money collected at the Museum door.

Do you conceive that there is no doubt that that is the property of those individual Professors?—I should conceive it is their property, and that they are entitled to remove it from the Museum to-morrow, and sell it if they should be so disposed.

On what footing did the Banks advance that money?—I think it was understood that the late General Reid had left a large sum of money to the Principal and Professors, and it was represented that General Reid's donation would fall in due course, and that then the principal would be paid.

Was not the loan advanced by the Bank for the public object, of it being a benefit to the University, and in reliance upon that succession of General Reid's legacy?—It is so long since the arrangement was entered into, that I cannot recollect the particular details.

Are you aware that a Memorial was prepared and transmitted to the Banks, stating the object to be a public object, and that the loan was asked for, solely in reliance upon that fund, to which the University had a right?—I have no distinct recollection of the Memorial in question.

Do you recollect who prepared the Memorial that was sent to the Banks?—I have no recollection of the Memorial.

Did not Sir Henry Jardine take charge of obtaining that loan?—I forget the history of the mode in which the money was obtained; it is likely that it was transacted by the Principal and the Secretary.*

Are those articles which were so purchased with the £3,000, included in the Catalogues returned to the Exchequer?—I think they are.

Did those articles, when imported, pass the Customs without duty?—Yes; Lord Melville was so good as to order a King's cutter to proceed to France for the Collection, and bring it to Leith.

Do you think that a King's cutter was sent to bring the importation of those articles for the individual Professors?—That was the understanding at the time, I believe.

Was that understanding on the part of the Professors, that the Collection was not for the Museum, but private property, communicated to the Government?—I cannot say what species of communication was made, but that was the understanding. What was done actually, I do not recollect.

Was a special representation made to the Treasury, in order to obtain facilities for the importation of that Collection?—I have no recollection of it; but I dare say it must have been done.

Would any copy be kept, by any person connected with the University, of such a representation, if it was sent?—It may be engrossed in the records of the University, or it may be among my papers.

Then there were other articles purchased with the surplus of that loan besides the French Collection?—Yes.

Do you understand that those articles also are the property of the individual Professors?—I should think they are upon the same footing as the others.

Are those articles contained in the Catalogue returned to the Exchequer?—I should think they are.

A certain number of articles have been purchased by means of the half-crowns collected at the door; in what situation do you conceive them to stand?—I do not know; I am at a loss to say to whom they belong.

Between what parties do you think the doubt lies?—Whether those specimens belong to the Crown or to the Town.

Or to the Professors?—Yes. They may say that a considerable portion of the money is obtained by the showing of *their collection*, and that, on this ground, they may have a claim to a portion of it, in order to pay the expenses attendant upon the preservation of their Cabinet.

That is to say, that in consequence of that addition to the University Museum, the individual Professors may maintain, that part of the money which is collected, is obtained in consequence of the desire to see that Collection?—They may possibly maintain such an opinion, as they naturally consider that a principal object of attraction, at present, is their Collection of Birds.

Are the £100 from the Exchequer, and the half-crown fund, mixed together?—Generally.

Then, when anything is purchased out of that fund, you cannot exactly tell whether it comes from the half-crowns or from the £100?—Sometimes I have made a distinction, and at other times not.

---

* *Note on revising.*—"N. B. I now recollect that Sir H. Jardine took charge of obtaining the loan of money from banks.—R. JAMESON."

University of Edinburgh.

Professor Jameson.

9 November 1827.

To what purposes is the £100 allowed by the Exchequer applied?—It is applied for the general purposes of the Museum, as stated in the detail of expenses I gave in.

Will you state to the Commissioners the various ways in which Donations are made to the Museum?—Sometimes donations reach us addressed for the *College Museum*, others again are sent to the *Regius* or *Royal Museum*. Collections are also sent, addressed to *me as Professor of Natural History*, and the Collections so addressed, in general, have been from my private pupils and friends, who have promised, on leaving the University, to send home Collections. It sometimes happens, that young gentlemen attending the Lectures, have brought to Edinburgh with them specimens of various articles, and they have made me a present of those: that is another style of donation. Then again, packages sometimes come addressed, "*The Edinburgh Museum—care of Professor Jameson.*" I may remark, that it has sometimes happened that Collections have arrived under these addresses, and I never have been able to ascertain who sent them, there being no accompanying letters. Sometimes there have been catalogues, but no means of enabling me to judge who were the donors.

Have you, upon any occasions, when packages arrived, addressed to the College Museum, or to the Professor of Natural History, or to the Keeper of the Museum, applied to the persons, to know for whom they precisely intended them?—I may have done it, but I generally knew by the letters what was intended to be the destination.

Have you received any donations upon your own application?—Yes; I consider most of those that come from my pupils, as the result of my personal application to them. Generally, before my pupils leave Edinburgh, I request them to collect specimens of Natural History for me, and often furnish them with particular instructions for collecting and transmitting collections of Natural History. Further, my influence as Professor of Natural History in this University may also have its share in increasing the number of donations.

Have you specially applied to particular Bodies, such as the East India Company, to send donations to this Museum?—Yes; that was a case in which I used my personal influence, in the first instance, to get that accomplished.

On what footing does the property in those articles stand?—Of course, coming from a Public Body, to the University, or to the Royal Museum, I should think to the Royal Museum. Coming from a Public Body, I should say that no individual can have any distinct claim to the property.

Sometimes you make journeys, for which an allowance is made, in which you obtain specimens; in what manner are those disposed of?—They are deposited in the rooms, and entered in the Catalogue.

Do you mean that you deposit all that you collect upon those journeys?—The journeys sometimes occupy me two or three months, so that the £25 goes but a short way. In regard to the specimens collected, I used formerly, occasionally, to retain a few duplicates. Now, as I have no Museum at home, the specimens of every description are carried to the Museum.

Those, it is presumed, you consider as belonging to the Royal Museum?—I should think a part belongs to the Royal Museum, as £25 is granted by the King to assist in defraying the expenses of the journeys.

There is a certain portion of the Collection that was left by the former Professor of Natural History?—Yes.

That is a very small Collection, is it not?—There is scarcely anything left; it is almost all thrown out. A few things were kept for a year or two; they gradually gave way, in consequence of having been badly prepared, and scarcely anything remains of that Collection. There are some pieces of rock, and articles of Indian dress, which still remain, and probably those are the only articles left of any consequence.

The articles being in all those varied situations, with regard to property, are all those various classes exhibited?—Every variety of property is exhibited, more or less extensively.

The Commissioners understand that you have not room to put up everything you would wish to exhibit?—It is so.

And that is the case with respect to the Huttonian Collection, particularly?—Yes; the Huttonian Collection, owing to want of accommodation, is not exhibited.

Are any articles exhibited in the Museum, besides that French Collection, and the other purchases made by means of the loan, which you consider to be private property?—The donations I mentioned as having been presented to me by my pupils, are exhibited, and those I might consider as private property.

Do you now hold them to be given over to the Museum?—I intend to make them over.

But you do not now consider them as the property of the Museum?—I should think not legally; I have not made them over.

Is there any list or record kept, either by yourself or by your Assistant, of the donations, from whatever quarter they come, and the address under which they come, or of the objects of the donor?—I have been in the practice, for my own satisfaction, of keeping a record of that kind, in which all the business of the Museum is detailed, both public and private business, and the articles sent are regularly entered; the addresses on the cases are generally copied off and inserted into the Report-Book.

What proportion, do you conceive, of the Museum, independently of the French Collection, may be claimable on that footing by yourself?—I could not specify that particularly, as many things are packed up, and must remain so till the *lower room* is finished. Until the whole collection is unpacked and arranged, it is quite impossible to give anything like a satisfactory answer to that question.

Are there any other individuals whom you conceive to have, or who could state themselves to have, any right of property in any articles exhibited in the Museum?—No. A species of property may be mentioned, which, however, I presume, is public: it is the collection left by

1654

[University of Edinburgh.

Professor Jameson.

9 November 1827.

the late Dr. Thompson, of Naples—a collection of rocks and other curiosities of that description, and £1,500, which he bequeathed for the improvement of the collection. The collection came here, plundered and destroyed, but such as it is, it is in the rooms. That collection is now under the charge of the Lord Provost and Dr. Hope, and some other individuals, and it stands in the catalogue under the title of the Thompsonian Collection.

Was that for the purposes of the College Museum, or for the purpose of taking care of Dr. Thompson's Collection?—It was with a view of preserving and improving the Thompsonian Collection, and also as a salary to the Lecturer on Mineralogy, who is at present Professor of Natural History.

Do you understand that any private individuals have any right of property in that collection?—No; it is to be considered as public.

Are there any other individuals, besides yourself, who you think can state any right of property in any part of the Museum?—There is one case which occurs to me: Mr. Professor Russell, a few years ago, deposited in the lower room of the Museum, the skull of the Asiatic elephant; he said he would allow it to remain there, till he would make up his mind as to its ultimate destination. He is entitled to withdraw that specimen when he chooses.

Are there any other articles upon that footing?—At this moment I do not recollect any other article; but there may be some other articles upon the same footing.

The Commissioners have before them the Exchequer Catalogues: will you be so good as to state whether those Exchequer Catalogues include all the articles which are exhibited in the Museum?—I should think the Catalogues include nearly the whole, but in a very general way.

Is there any other Catalogue, besides the Exchequer Catalogue?—I mentioned before that a Catalogue is in progress; but that Catalogue cannot be finished, till the lower room of the Museum is fitted up; because, as soon as that room is fitted up, the whole arrangement of the Collection will be changed to a certain extent; and if the Catalogue should be printed before that arrangement is accomplished, it would require to be rewritten and reprinted.

Is there any other Catalogue besides this—that is, the Exchequer Catalogue—of the acquisitions and donations, without any minute description of each individual article?—There is the Catalogue in the private note-book I mentioned.

Does this Catalogue contain everything which is in that memorandum-book of your own?—I think it does.

Does this Catalogue contain every donation, or is it intended to contain every donation, made to the Museum, or to the Keeper of the Museum, whether the address, under which it comes, be—"College Museum," or "Royal Museum," or "Edinburgh Museum," or "Museum, care of Professor Jameson?"—I should think it contains a list of everything that has been sent, as far as I can recollect.

In making this annual Report to the Exchequer, in order to be entitled to the annual allowance upon the Treasury Warrant, do you, upon any notion of distinction as to property, designedly leave out of this Catalogue any sort of articles contained in the Museum, as not falling within its object?—No; I consider that the order I had from the Barons of the Exchequer, commanded me to give an account of every article presented to the Museum, or contained in the Museum rooms; and on that principle I have, in this book, inserted everything.

Then, in framing this Catalogue, you do not proceed upon the principle that there is any portion of what is exhibited in the Museum, to which the order of the Barons does not apply?—I should think not. In short, this Catalogue was intended as a general Catalogue, framed in conformity with that general order of the Barons of the Exchequer, that they should know every year what has been added to the Museum.

Does it contain all the purchases made out of the half-crown fund?—It only contains the purchases to the extent of the £100.

It contains no purchases, except in so far as the proportion of the £100 will cover them?—I think so.

Is there any separate Catalogue made of those purchases?—For some years I separated the articles purchased with the £50; afterwards, in conformity with a form given me from the office, I did not: the whole went as a general sum for the expenses of the Museum.

Does this Catalogue contain all the articles presented to yourself by name, or to the Professor of Natural History, from former pupils, and from any other quarters, which are exhibited in the Museum?—I think it does.

Does it contain the articles which were purchased from the half-crown fund, which are exhibited?—I think it does.

Does it contain more of the purchases of the Museum than corresponds to the proportion of the Exchequer allowance?—I think so.

Is there any separate or distinct list kept of the articles which come to you under the Custom-House regulations, and by the facilities afforded by the Government?—When they arrive in that form, they are regularly mentioned in the Report-book, also in the Catalogue; but the channels of conveyance are not mentioned in that Catalogue.

Can you state positively that this Catalogue contains everything which passes through the Custom-House by the benefit of the facilities that the Government has afforded?—I should think everything of this description is engrossed in that book.

Do you conceive that any claim exists, on the part of any individuals or set of individuals, to the property of any articles which were imported under the benefit of those facilities?—I should think nobody is entitled to claim them.

You conceive that they belong to the Royal Museum?—Yes.

What distinction subsists between those importations generally, and the French Collection?

University of Edinburgh.

Professor Jameson.

9 November 1827.

—The French Collection was purchased by the Professors; although coming under the seals of office, it was considered as a particular case.

Does not Lord Londonderry's letter expressly direct, that all articles obtaining the benefit of those regulations, should be considered to be the property of the University, under the charge of the Regius Keeper of the Museum?—I think application was made for the remission of the duties, by the Principal and the Professors; any private individual may obtain a remission of the duties. Now, the Principal and the Professors, as far as I recollect, applied for the remission of the duties upon this Collection.

Did they apply upon the ground that that Collection remained private property?—They, as far as I recollect at the moment, applied, as any private individual would apply, for the remission of the duties upon such articles.—[*Professor Jameson now exhibited a Catalogue of the Mineral Cabinet, laid out under glass in the Great Room of the Museum.*]

Are the Specimens in this Catalogue included in the Report to the Exchequer?—They are included generally,

But they are not described so minutely as they are here?—No, they are not minutely designated.—[*Professor Jameson next laid before the Committee different Catalogues of the Birds, and of the Insects and Shells and Corals of the Dufresne Cabinet.*]

Are these Catalogues included in the Report-book?—They are mentioned in the book in a general way.—[*Professor Jameson now laid the Report-book, which is in four volumes quarto, before the Committee, when it was inspected.*]

Is this book reported to the Exchequer?—No; it is kept principally for my own satisfaction.

Is the Report to the Exchequer intended to include everything that is contained in this weekly Report?—Yes, only in less detail. In this book, in addition to the Catalogue, there are the names of the Visitors, and the business that has been done during the week,

Are these Visitors the persons that pay the half-crowns?—Yes.

Then, in short, making allowances for accidental omissions, the Exchequer Catalogue comprises everything received as well as everything exhibited?—Yes, pretty nearly.

This book being entitled, "A Report of the Proceedings at the Museum," it should seem that everything entered as received, is held to belong to the University Museum, and to be under your charge as Keeper thereof?—Yes, generally so.

Are the purchases mentioned in this book?—Yes, every transaction during the week; also the state of the Museum, the temperature of the rooms; in short, everything connected with the condition of the Collection is engrossed in it.

At present, half-a-crown is taken from every person, however often he may go to the Museum; do you think it is not possible to lower that sum, without materially injuring the income derived from it?—I should think it cannot be done with safety. The claimants for frequent admission are very few indeed; that I know from the circumstance of so few annual tickets being demanded. It was thought, when annual tickets were granted for ladies, that there would be a great rush; but I was aware that this would not happen. There have been sold not more than ten or fifteen tickets of this description during the year, although the price of the ticket is not more than 10*s.* 6*d.* I should think, if the admission-money were lowered to 1*s.*, or 2*s.*, there would be a great falling off of the income from this source.

Are you aware that at the Hunterian Museum, at Glasgow, where the sum was originally 2*s.* 6*d.*, they lowered it to 1*s.*, and did not lose money by it?—Yes; it is different at Glasgow. For many years no entrance-money was demanded; then 2*s.*, or 2*s.* 6*d.* The citizens, being unaccustomed to pay, refused to visit the Museum. It was then lowered to 1*s.*, when, for a time, there was a demand for admission. But, independent of this, the Glasgow Museum is small; if a sight of it is worth 1*s.*, the Edinburgh Museum is surely worth 2*s.* 6*d.* The sum of 2*s.* 6*d.* as admission-money was fixed after corresponding with and consulting the Keepers of Collections of every kind. Their opinion was, that 2*s.* 6*d.* was the lowest sum that could be demanded under the circumstances of the case, the University Museum being an *Academical Collection.*

In fixing the sum, were you regulated solely by a view to obtain the largest revenue that you could obtain, or were you also regulated by the notion, that in such an establishment as that Museum, it might be advantageous to exclude a certain portion of people, by fixing it at 2*s.* 6*d.*?—The arrangement was made with the view of obtaining the largest sum, consistent with the nature of the Museum,—it being *Academical,* and not intended for the purpose of mere popular exhibition.

It was not solely fixed upon the notion that 2*s.* 6*d.* was the sum that would bring the largest revenue, but it had reference to the propriety of only admitting those who would not mind paying 2*s.* 6*d.*?—It was intended, on the principle already stated, that such an admission would answer all the purposes of Science, and produce the largest revenue.

Suppose you were to continue the charge of 2*s.* 6*d.* for the first admission, and were to make a rule that any person that had once paid the 2*s.* 6*d.* should be admitted afterwards for 1*s.*, do you think that would be a beneficial regulation?—That never occurred to me. I may state that it is a practice, when any gentleman has been *frequently* in the rooms, no further admission-money is demanded, or a gratis annual ticket is given to him; but such cases are of rare occurrence.

REMARK.

The foregoing statement contains a view of the Amount and Expenditure of the Museum Establishment, from 1812 to 1826. The details of Expenditure, if required, can be furnished from the records of the Museum, and the books of the Exchequer. The amount of monies granted by the Town, for the support of the Museum, from 1804 to 1820, has not yet been furnished by the Town-Council.

Edinburgh, Monday, January 25, 1830.

[*Taken before Lord Corehouse, Lord Moncrieff, the Solicitor-General, and Dr. Lee, as a Committee on the state of the Edinburgh Museum.*]

The Honourable LORD MONCRIEFF in the Chair.

Sir *George S. Mackenzie* of Coul, Baronet, was called in, and examined as follows:

Sir George S. Mackenzie.

25 January 1830.

The Commissioners understand, from a letter written by you to one of the Members of the Commission, that you have some important information to communicate relative to the Museum of the University of Edinburgh?—I have some such information. I have something to state with respect to the property of the Royal Society, and I have some papers connected with that subject along with me. And I have also to say for myself, that in the year 1810 I visited Iceland, with a view to examine the Geology and Mineralogy of that country; and I brought home with me a very large Collection of Specimens, which every body considered interesting and valuable. On my return, I separated the greatest part of my specimens into two collections,—one of which I presented to the Royal Society, and the other I sent to the College Museum. At that time I was a good deal hurried, and was busy in writing my account of Iceland, and sent the specimens with marks which would enable me at any future time to label them. I thought that Professor Jameson would be anxious that I should do so as soon as possible. And I may mention, that at that time I never got thanks from any person for the donation.

When you sent the collection of specimens, which you selected for the College Museum,—to whom did you address them?—I sent them in boxes, with a note to Professor Jameson. I suppose there must have been 200 or 300 specimens.

With what view?—With a view to form part of the College Museum.

That was stated to him?—Yes.

We want to understand whether you intended these specimens for the benefit of the public, or of Professor Jameson?—Certainly for the public. I repeatedly met Professor Jameson in the course of my visiting the classes in the College, and spoke to him very often about them, and at last said that, as I was going to the country, I wished to put labels on these specimens before I went; but he always answered that some engagement, or something else, prevented him allowing me to go into the Museum, for the purpose of labelling the specimens; and to this day I have never seen the specimens since I packed them up. And I am not sure that now, without a great deal of trouble, and without comparing them with their fellows in the Royal Society's Cabinet, which have proper labels put upon them, I can make anything of them, and so the collection may be said to be almost useless or lost.

How long is it since you sent them to him?—I sent them some time in winter 1810-11; that is, 19 years ago.

Did you understand that they were exhibited in the Museum?— I never saw them, and never heard that any one else saw them; and, in truth, I was so often denied admission for the purpose of arranging and labelling them, that I was completely disgusted, and never thought any more about them.

We understand he never refused to allow you?—Never positively, but always put me off from time to time. His motive seemed to me evident.

Supposing that you or any scientific person wished to illustrate any particular views or theories, was the Collection referred to such as to enable you to do so?—Yes. It certainly did exhibit facts directly opposed to the theoretical views that Professor Jameson then held; and did illustrate the Huttonian Theory. And it was with the view to ascertain the origin of the trap-formation of rocks, and which was disputed between the Huttonians and Wernerians, that I went to explore Iceland.

Then are we to understand that you have not gone through the Museum at all lately?—I have been in it occasionally with strangers who have come from England and from abroad, but I have not gone alone.

But you could not discover whether any of your own specimens were there?—It was quite impossible.

When the donation was received by Professor Jameson, did he make any statement as to its value?—He received it without any remark whatever; he never said that I, or we, or any body, was at all obliged to me, or that he even had received them; if I had not known by subsequent conversation that he had got them, I might never have understood that they were there at all.

But you never understood that the donation was not exhibited, on account of its not being of sufficient value or interest?—Never. Many Scientific men having gone to the Royal Society's Collection, said that it was valuable. I remember going over it with the celebrated Geologist Von Buch, who expressed very great interest in the collection, which in reality exhibited the whole Geology of Iceland. The collection in the cabinet of the Royal Society, filling ten or twelve drawers, contains but a few specimens more than that which I sent to the College Museum.

Do you happen to know that there are any such specimens in the Huttonian Collection?—There might have been some specimens of the same kind, but not many. There are many

6/61

University of Edinburgh.

Sir George S. Mackenzie.

25 January 1830.

valuable and rare specimens in that which I sent—at least they were rare at the time, and some were new to Mineralogists.

Upon what footing did you send the Specimens to the Museum?—As a gift to the Public Museum from myself.

How often did you apply for admission?—I cannot say that I now recollect the particular occasions, or particular object in the Museum which I may have wished to see; but at any time I wished to see any particular object, I was put off for some reason or other. I have sometimes got in, by favour of a servant. I have heard a multitude of persons complain that they never could get access.

But they could get in upon paying half-a-crown?—True; but they could see nothing on these occasions but those things exposed to view in the glass-cases.

Was that the general complaint of Scientific men?—Yes. I heard many complaints while I resided in Edinburgh; and I have heard the matter talked of since I came to Edinburgh last October; and I have read complaints in the newspapers, and heard the state of the Museum, in regard to difficulty of access for Scientific purposes, commented on in public.

Do you suppose that the ordinary Mineralogical Specimens would be much injured if occasionally examined by Scientific persons?—I certainly think that, in using a Mineralogical collection of general Specimens, if they are to be indiscriminately handled by every one, they will be injured; but, if shown only to Scientific persons, they would not injure them, either in examining them, or in making any drawings for illustrating particular points. I have not the least doubt, that indiscriminate examination would injure them, for there are some delicate Mineralogical Specimens that would be extremely injured by the moisture of the hand in touching them, and other Specimens of Natural History in the same way; but any person who has a value for these things, and examines them for Scientific purposes, would not injure them. At the same time, it would be right that some person, belonging to the Museum, should be present when the Specimens are examined.

Then the occasional examination of Scientific individuals, say six, eight, or ten times in the course of a year, would not, in your opinion, tend to injure the Collection?—Not in the least.

Would the number of such applications be considerably diminished, if an individual publishing a work on Natural History was allowed to give a correct description of the Specimens deposited in the Museum?—Certainly. At the same time I must observe, that such publication may excite an interest to see those individual Specimens that are described.

But merely to look at them once or so?—Yes.

If no doubt is raised as to the accuracy of the description, the applications would not be more frequently made by Scientific men, in consequence of publications descriptive of the contents of the Museum?—Seldom or never.

Since the Museum of this University has been formed, which has chiefly, I believe, been in your recollection, there has neither been periodically, nor at intervals, any account given to the public of the Specimens deposited there?—I never heard of any officially given. There have been several Scientific Journals published in Edinburgh, and all of them contain accounts of objects of Natural History; but I believe that the Journal published by Professor Jameson, and the Wernerian Society Transactions (a Society instituted by him, which held, and perhaps still holds, its meetings in the Museum), are the only sources from which any information respecting novelties sent to, or obtained for, the Museum appears, which are always first shown to the Wernerian Society. I understand there is a Mr. Cheek, who has published a statement this winter of his having been prevented from examining some Specimens he wished to describe, illustrative of the subject on which he was writing.

I suppose you know the general nature of the Huttonian Collection?—I recollect seeing it more than once, while the trustees named by Dr. Black were preparing to arrange it. I have here a Minute that speaks of it.

Before you go to that, I wish to ask a question relative to it. I suppose you are aware it was not exhibited in the Museum?—I have not seen it there.

We can inform you; it has not been opened. It was shown to the Commissioners in the boxes. Do you consider that defect in the Museum a drawback on the progress of Science, if that Collection is not there?—I consider it so: because it was a Collection formed by Dr. Hutton, a very celebrated man, whose theory of a particular class of Rocks is now universally admitted, and which was illustrated in a work by the celebrated Professor Playfair. On that account, I do not think it would be proper to separate it, and class the Specimens with others of the same kind in the Museum; but that it ought to be kept entire. It is so long since I have seen it, that I cannot say anything about its intrinsic value as a Collection of Mineral Specimens; but at the time it was given to the Royal Society, it was considered a very valuable and curious Collection.

You had better state to us what you were going to mention?—I have here a Minute-book of the General and Council Meetings of the Royal Society, kept by Mr. Playfair; this is in his own handwriting. It is his own Memoranda, apart from that inserted in the Minute-book. The date is 25th June 1804, and the following is an extract from these Memoranda:—

"The Vice-President informed the Meeting that it was called in consequence of a note from the Professor of Natural History in the University of Edinburgh, Mr. Robert Jameson, requesting to be informed, whether it was intended that the Huttonian Collection of Fossils was to be deposited in the Museum of the University, under the charge of the Professor of Natural History.

"The Council having then considered Dr. Black's Letter of the 2d of December 1797, and the conditions therein annexed to his donation, and also the Minutes of the General Meeting of the Royal Society, of the 21st of December 1797, at which the said donation was accepted, requested that the Committee then appointed for the arrangement of Dr. Hutton's Collection, previous to its being put under the Trustees described in Dr. Black's letter, should report the state in which it now is; when Mr. Playfair, for Sir James Hall, Dr. Hope, and himself, gave in the following statement:—That the

25 January 1830.

Huttonian Collection is at present deposited in a room of the new buildings; and that, though a good deal has been done in separating the useless specimens from the rest, and reducing the whole under certain classes, yet a great deal is wanting to bring the Collection into that state of order and arrangement which is necessary to fit it for public exhibition: that a good deal of time will still be requisite to enable the Trustees, just named, to bring the Cabinet into this condition, which they would endeavour to do by arranging it, as much as they are able, conformably to the mind of the Collector, and to the views suggested by his System of Geology; and that they are the more willing to adopt this arrangement, as they have no doubt that the Royal Society considers the Collection as valuable, not only as a Cabinet of Natural History, but as a monument and memorial of two illustrious and worthy Members of the Society. The time necessary for accomplishing the proposed arrangement, they think, cannot be much less than a year, reckoned from the present date.

"They have therefore to propose, that the appointment by which the Cabinet was committed solely to their charge till it is arranged, shall continue for the term of one year, to be counted from the present time, against the expiration of which they engage to lay before the Society an arranged Catalogue of the Specimens in the Collection, to place the Specimens in proper Cabinets, (to be provided at the expense of the Royal Society,) and to deliver the keys of them to the Royal Society.

"The Council was pleased to approve of the above Report, and to agree to the prolongation of the time as proposed in it, during which the Collection should be exclusively under the charge and direction of the three Trustees above named.

"The Council then directed that the Secretary should inform Mr. Jameson that it had taken his note into consideration, and had taken such steps as appeared proper for putting the Collection of Dr. Hutton into order—which, however, must necessarily require some considerable time, after which it will be disposed of agreeably to the conditions of Dr. Black's donation."

Do you understand whether the Huttonian Collection was arranged?—I do not recollect whether the arrangement was completed.

But suppose the Collection had been arranged according to the undertaking of the Trustees, they would have reported to the Royal Society?—I would have thought so; but I have not been able to discover any such report. After Mr. Playfair's death there were several Minutes missing, and there are some referred to in this Minute that cannot be found. With respect to the rest of the property belonging to the Royal Society in the Museum, I have here a copy of the Report of a Committee, of which I happened to be Convener, which was appointed in 1804. It is, perhaps, rather long, and would occupy too much the time of the Commissioners by reading it; but if you instruct the Secretary to take care of it, I will leave it; and if you read it, you will find a good deal of information relative to the property of the Royal Society in the Museum.

Can you describe the kind of property belonging to the Royal Society?—There are a great variety of objects of Natural History, and Curiosities from the South Sea Islands and other parts of the world. There is a regular Catalogue of them printed in the different volumes of the Transactions of the Royal Society.

On what footing were they passed into the Museum?—By the directions of the original Charter to the Royal Society.

We have a claim from the Royal Society before us?—They got a new charter. There is a short extract here from the old charter, which I will read, if you please—

"Et nos ordinamus ut cunctæ Res Antiquæ, Tabulæ Publicæ, Librique Manuscripti quos acquisiverit dicta Societas, deponantur in Bibliothecâ Facultatis Juridicæ, atque ut universa corpora quæ ad Historiam Naturalem pertinent, quæque eadem Societas acquisiverit, deponantur in Musæo Academiæ Edinensis, ita ut utraque Collectio aperta sit Sociis, et e republicâ sit, quantum fieri potest."

It was under this direction of the first charter that all subjects of Natural History were to be deposited in the Museum. Dr. Walker was Secretary of the Society, and he and the other Professors, members of the Society, were anxious that the Museum should be augmented as much as possible; and the Society agreed that they would concede that all objects of Natural History acquired by the Society should be deposited in the Museum.

Was any facility given to the admission of the Members of the Royal Society to visit the Museum of the College on that account?—None since Dr. Walker's death. By perusing the Report of the Committee, you will see how obstacles were thrown in the way of access.

Then no member of that Society can obtain admission but on payment of 2*s.* 6*d.*?—I never heard that any member of that Society could get access to it upon any other terms; and even this payment does not enable them to see their own property, which is not distinguished. The result of the attempt of the Royal Society to see and to arrange its property in the Museum, is in the Memorandum, which I wrote to the end of this Report in 1804:—

"The Committee was afterwards admitted into the Museum, when the Keeper showed them some chests or boxes lying under the seats of the Class-room, which he said he *believed* contained some things that belonged to the Royal Society; and he added that it was impossible to find room for displaying everything,—that many things had been lost during the time when Dr. Walker was Professor of Natural History,—and, in short, the prospect of executing the directions of the Society appeared so hopeless, that the Committee suffered the business to drop. Now, however, that everything has been moved into the new rooms, it is proper that the Society should claim, not only their right of admission, but the express right given by the Charter, and arrange every part of the property belonging to it, in whatever order they may please to place it."

Can you state whether the intention on the part of the Royal Society, in forming a Museum of their own, arose in not obtaining the use of the Museum of the University of Edinburgh?—The new Charter was obtained on account of the inconvenience of having to refer to the Professor of Natural History; but, if I remember well, it was particularly desired by the Royal Society to possess a Geological Collection in their own custody, having been obliged to send the Huttonian Collection to the College. At that time the disputations between the Huttonians and Wernerians ran high, and most of the Members were Huttonians. I am not certain

6/13

University of Edinburgh.

Sir George S. Mackenzie.

25 January 1839.

of the date of the present Professor's appointment, who was the leader of the Wernerians; but it was understood, sometime before Dr. Walker's death, that he was to be appointed his successor, and this may have had some influence. I knew this from the circumstance of a friend of mine, who died in 1803, having been an unsuccessful applicant for the succession to Dr. Walker. The warrant for the new Charter was not obtained till December 1808; and long before that time Professor Jameson had been appointed to the Natural History Chair. Sir James Hall was the individual who moved for a new Charter. Here is the Minute, dated 26th January 1801:—

"Sir James Hall moved, that it be recommended to the Council to consider of certain clauses in the Charter, respecting the manner of disposing of such specimens of Natural History as may be presented to the Society, and of the inconveniences that may arise from them, as well of the means to be adopted for remedying the same. The Royal Society did accordingly recommend it to the Council, to consider the circumstances just stated, and to report their opinion concerning them to the next General Meeting of the Society."

Can you state to us that the access, referred to in the foregoing Minute, related to the obstruction thrown in the way of admission?—Certainly it did, to some inconvenience or obstruction, but not to the obstructions since thrown in the way by the present Professor; unless he was appointed previous to the date of the Minute.

That was before the building for the new Museum?—Yes, many years.

Certainly before the appointment of Professor Jameson?—I am at this moment uncertain: but the present Professor lectured many years in the old Museum.

Do you conceive it would be more advantageous in general to the interest of Science, and more likely to be a proper, complete, and more extensively useful Collection, if there had been one general Museum in Edinburgh—supposing that full facility was afforded to inspect it?—I think so. The vast utility of the British Museum in London is proof of that; a great central Museum is certainly the most useful.

Do you understand that the Collection in the present Museum of the University of Edinburgh has been exhibited, with reference to the illustration of any particular views of Natural History; or that there is any complaint generally that the Specimens were not fully or impartially exhibited?—I have not heard of any Exhibition by the Professor, except to the students of the Natural History Class, and to the Wernerian Society. The Wernerian Geological System has always been taught by the Professor.

The question relates to whether the Specimens in favour of the Huttonian System were generally or at all exhibited to the public?—I never heard that they were. I have attended Professor Jameson's Lectures myself, and never heard him allude to Dr. Hutton's Theory or Collection.

Are we to understand generally from you, as a person long devoted to Science, that, in order to render a Museum useful and valuable, some different system should be adopted as to the access to and use of the Museum?—Certainly. It appears to me, in order to make this Museum valuable for the purposes of Science, that some person should be appointed as its Keeper, different from the Professor of Natural History. I beg to explain, that I make no particular allusion to Professor Jameson: but I give this as my opinion, whoever may be Professor. I consider that the functions of a Professor exclude him from this office. It would be impossible to expect that a Professor could attend upon all occasions, when access may be demanded for particular purposes. I would also propose that the Keeper, if appointed, shall be bound to prepare for the Professor such Specimens as he requires for the illustration of his Lectures, taking care that they shall be returned to the presses after the Lecture. I would likewise propose, that all the students of Natural History shall be obliged to exhibit their tickets to some Members of the Town-council, who are Patrons, to be endorsed; and such endorsation to authorize the Keeper to admit the students with such tickets, but only while attending the Lectures on Natural History. I state this, as I wish that the Town-council could be induced to take some interest in the Museum, which is of importance, they being the Patrons of the University of Edinburgh. I would also suggest, that any other Professors, wishing their pupils to see anything illustrative of their Lectures, might give orders of admission to pupils only. And with respect to the admission of the public, I would propose that it should be as unrestricted as possible; but as it appears that a Keeper is necessary, the Fees of admission may be regulated to form a fund, out of which the Keeper may be paid. Persons wishing to have access at all times, might have it on paying a fee of £1. 1*s.* per annum; individuals may be charged 1*s.* 6*d.*, and parties 1*s.* each person. I have very often heard great complaints of the 2*s.* 6*d.* In order to regulate the admission of the public, and excite attention in the parties, public notice should be given by the Patrons to all persons desirous to see the Museum at the College, to insert their names in a book at the Council-Chamber, and there receive a cheque, and on presenting this at the College, and paying the fee, that admission is to be given. I would also suggest that a catalogue, or record, of all donations should be kept at the Council-Chamber, and that they should be directed to be sent there previously to being deposited in the Museum, and that an engraved letter of thanks should be prepared, to be sent to the donors. Owing to the neglect of such things hitherto, it may be difficult to distinguish public property from that of the Professor, who ought not to be allowed to keep a single article of his own in the Museum. Every person who wishes to see or draw anything, ought to be admitted gratis, on the recommendation of any Professor, or the Secretary of the Royal Society. And with respect to the property of that Society, deposited in the Museum, it is very desirable that some arrangement be made; and I propose that the General Secretary of this Society, or, in his absence, any of the Ordinary Secretaries, shall have power to give tickets of admission to Members desiring to see the Collection generally, or any particular object specified in the ticket. The Huttonian Collection should be set apart by itself, and be accessible to

University of Edinburgh.

Sir George S. Mackenzie.

25 January 1830.

the Members of the Society producing orders from the Secretary. I may venture to state, as an opinion merely, that if access be given to the Members in the way proposed, the Royal Society may have it in their power to contribute largely to the Museum,—for in the building occupied by the Society there is scarcely any room for a Museum; and I have little doubt that the Society would be glad to see what they possess properly secured and accessible in the College Museum. I have no authority for saying this, but I think it not unlikely to be the opinion of the Society.

When you propose that there should be a Keeper, not the Professor of Natural History, and that there should be tickets issued from the Secretary of the Royal Society, the Patrons, or other Professors, do you think the inconvenience attending the present system would be obviated by an Assistant-Keeper being appointed, having those powers?—I think so, certainly. I meant to say an Assistant-Keeper. I did not mean that the Professor should be altogether excluded from his interest in the Museum—I should have said, an Assistant-Keeper with those powers.

When you propose the interference of the Town-council, and a record to be kept by them, have you any special object in view, seeing that the Museum is no part of the property of the Town?—My reason for that is two-fold. It would excite some feeling of interest in the Patrons, the Town-council, which I fear has not been hitherto felt towards the College Museum; and also it might tend to excite some attention in the students, when they know that a record will be kept of those who are desirous of cultivating Natural History. In this way I think some good may be derived from what I propose. Besides, it is well known that a little formality being required in such matters, everything is better attended to.

Have you any other facts to state, or suggestions to make, relative to the College Museum?—None; except that it would be of importance to have the lower room properly fitted up, in order that everything contained in the Museum might be exhibited with facility. If properly regulated, the Museum will soon require additional accommodation, on account of donations that will be sent to it from all quarters.

Addition made on revising Evidence.

I beg leave to add, in regard to the Huttonian Collection, that I remember some very large Specimens belonging to it, which were too unwieldy to be placed in a cabinet; but, no doubt, the Committee of the Royal Society, or the Trustees named by Dr. Black, have made some provision respecting them. Such Specimens and others may not now possess so much interest as at the time they were collected.

Dr. *Samuel Hibbert*, F.R.S. Ed. &c., Edinburgh, was called in and examined as follows:—

Dr. Hibbert.

We understand you have some communications you are desirous of making to the Commission, relative to the Museum of the University?—It was not from my own suggestion that I appear before the Commission, but at the instance of Sir George Mackenzie; who, without my knowledge at the time, mentioned that I had the means of making some communication in this inquiry. But, perhaps, you might have fixed upon some person who could have given more information than me, as I have been two or three years out of the country, on the continent of Europe.

Have you resided in Edinburgh lately?—Not for two years and a half.

But previously?—Yes, about twelve or fifteen years.

And I believe were connected with some Literary and Philosophical Societies in Edinburgh?—Nearly all, Sir.

Do you hold any official situations in them?—Not at present. I was one of the Council of the Royal Society, and the Secretary of the Antiquarian Society; I also held offices in some other Societies, before I went abroad.

Then will you be so good as to state any facts of importance known to you, relative to the Museum?—The facts I have to state are extremely few. They relate chiefly to the great difficulty of access to the Museum. But, as it was an opinion, rather than evidence, which was required from me in the notice which I received, I have accordingly prepared beforehand a written statement of what I have to offer on this subject, in order that the time of the Commission may be economized. This I beg leave to read, and I shall give any detailed explanation that may be required afterwards:—

"Having been requested by the Honourable the Royal Commissioners for Visiting the Universities of Scotland, to give my opinion on the subject of the Museum which is attached to the University of Edinburgh, I beg leave, for the sake of economizing the time of the Board, to deliver my sentiments as concisely as possible in writing.

"I shall therefore premise, as a sort of truism, that as Botany requires to be studied with the aid of a Botanic Garden, Zoology, Comparative Anatomy, or Mineralogy, demand the equal assistance from an extensive Museum.

"*Secondly*, That a Museum, in order to be truly useful, must be easy of access. This was shown when a liberal policy of this kind was first adopted on the Continent, which gave an unprecedented impulse to the acquirement of the different branches of Natural History, and in which England became a successful competitor, when this conduct was imitated in the more free admission granted to its National Museum.

"Upon the policy, therefore, adopted in the Scotch Metropolis, I shall venture to say a few words.

"By the present system, the Museum is intended for little more than to be subservient to the use of the Natural History class of the College. A simple question, however, may be asked;—Why are the doors of the Museum less accessible to a Naturalist, after he has *completed* his required Course in the University? or can it be rationally supposed that he is then enabled to successfully pursue the study of Natural History, without the aid of any Museum whatever? Those who have completed their course of education at the College, are surely entitled to ask from their Alma Mater the boon, that the same facility for research which they enjoyed as students, may be continued to them, as the means whence

6/65

University of Edinburgh.

Dr. Hibbert.

25 January 1830.

they may be stimulated to such new inquiries as are calculated to reflect lustre upon the University in which they have derived their first rudiments of Natural Science.

"But, according to the regulation now in force, the price of 2*s.* 6*d.* is demanded from every one, unless he is actually in attendance at the Natural History class, for every occasion of admission to the Museum. As far, therefore, as regards the public in general, the exorbitance of these terms virtually closes the door against the frequent requisitions of the Naturalist, and the Museum is only useful as a spectacle for the transient stranger in Edinburgh, who pays his fee of admission as he would to any other place of public show.

"How far this measure is in justice due to the numerous donations which from time to time have been sent to the Museum, on the presumption that its doors were freely opened to the public, I will not pretend to determine. That it is not of advantage to the Museum may be confidently stated. For when a donor finds that its doors are closed, except on terms that few can afford to pay, he naturally looks with less complacency upon an establishment which is prejudicial to the cause of Natural Science, inasmuch as it intercepts and conceals from investigation the objects which have been bestowed to promote it.

"Such is my opinion on the policy of the present regulation adopted by the College. The only question, therefore, which remains, is, what different system ought to be adopted, so as to best serve the interests of Science?

"With regard to a free admission, I am not aware that it has ever yet been found prejudicial to a Museum; and for this reason, that it is not the lower class of society which feels any interest in the objects of it. Indeed, the experiment of a pretty general admission, where cautious restrictions only have been adopted relative to the preservation of the property, has been long tried, and without ill effect, in the British Museum of London, in the Gallery of Natural History at Florence, and elsewhere.

"But if the funds of the College do not authorize a free admission, I am of opinion, that to the price of 1*s.* each time for admission, no reasonable objection can lie, or for a distribution of annual tickets of admission at the price of one guinea each; the actual students of Natural History in the College, and those who have received their full education in it, being exempted from the charge.

"I should also be disposed to recommend that some individual in connexion with the Museum may receive such a compensation as will induce him to give his constant attendance in the rooms, in order that the consultations of scientific men may meet with no unnecessary obstacle whatever.

"And *lastly*, That every facility be given for artists desirous of sketching objects of Natural History. This is a point of extreme importance, as through this means Science is diffused, and the loss which must occasionally arise from the decay of specimens greatly obviated.

"This is the opinion which I would give, and what I offer with humility and all due deference to the superior judgment of the Royal Commissioners.

(Signed) "Samuel Hibbert."

Have you ever contributed any specimens to the Museum?—Yes.

To any considerable extent?—To some little extent. I scarcely remember the various specimens which I have given, with the exception of a series of minerals, illustrative of the Geology of the Shetland Islands.

You have published a History of Shetland, I believe?—Yes.

Have you continued to contribute of late years to the Edinburgh Museum?—Decidedly not. I had resolved not to give to the Museum again.

On what ground?—Owing to there not being a free admission.

Was that feeling common to others as well as to yourself?—I am certain that it was.

Did you continue to make a Collection, subsequently, of your own, of such things as came in your way?—Yes. Having devoted a great deal of time and study to Natural History, and not having free access to the Edinburgh Museum, I formed a Collection of my own.

And which you would not have formed for yourself, had you got access to the Museum?—Not to the same extent. I am now independent, in a great measure, of any public Museum.

Before you formed that collection of your own, had you personally applied for access to the Museum?—I remember Professor Jameson once mentioned to me, though very indistinctly, of my being allowed to go there; but very shortly after that time, I was obliged to pay half-a-crown for admission; and this demand being continued, I gave up going there entirely.

Then I don't understand you to say that you applied directly to Professor Jameson, and was refused access as an individual?—I was led to suppose that I could go there; but money being demanded from me several times on my application, I presumed no one would be allowed free admission; especially when there were gentlemen of still more intimate habits with Professor Jameson than I was, who were also obliged to pay half-a-crown each time.

You mentioned that you had some explanations which you could give, relative to some of your statements. We shall be glad to hear them?—I think they are chiefly comprised in what I have already mentioned, respecting the subject of donations and admission. You will bear in mind that I have been a long time absent from the country, and you will, no doubt, receive more particular information from the gentlemen in waiting.

Are you aware whether any account has been published, either periodically or progressively, of the Collection formed of the objects of Natural History in the Edinburgh Museum?—I am not aware that any such account has been published.

Have you any other explanations to give?—I might mention that I recollect another reason that prevented me sending anything to the Museum; which was, that being a Member of the Wernerian Society, I observed that all the objects of Natural History sent to it were obliged to go to the College Museum; and that the Members of that Society were not allowed free access to them. For surely, if the rooms of the Museum are appointed the places of deposit for donations sent to the Wernerian Society, the free privilege to see them ought not to be denied its members.

You are a Member of the Wernerian Society?—Yes.

Do you conceive that the objects sent to it continue the property of the Wernerian Society, or are they transferred to the Museum entirely?—I do not know;—that must depend on the

University of Edinburgh.

Dr. Hibbert.

25 January 1830.

fundamental rules of the Society. I have heard that one of the rules of the Society is, to deposit them in the Museum of the University; yet I think that the Museum has no right to attach them exclusively to itself.

Do you understand that the feeling you yourself have expressed on the subject of the College Museum, is generally entertained among the scientific gentlemen in Edinburgh?—I do conceive it.

And that the state of the mismanagement of the Museum is therefore a subject of general complaint?—I think it is.

Do you conceive that any great injury to the specimens is likely to result from the examination of them by Scientific individuals?—This examination must always be conducted with caution; but it is the duty of the Curator to take care that no injury be done to objects intrusted to him.

But birds, and other subjects of Natural History, may be drawn, without necessarily suffering injury?—Decidedly. Birds may be drawn while they are secured in a glass case; there is no occasion to touch them at all.

Do you understand that such a liberty was allowed in the Museums to which you have alluded, and to which the public had free access?—I never heard that it was forbidden; but I would rather not be too sanguine that the privilege is universal—there are so many Museums.

Do you know what precautions are taken in the Museums to which you have alluded, in showing to persons of science what they wish to study?—I have seen no precaution adopted, except, occasionally, a person belonging to the Museum remaining in the room with the individual who might wish to examine any object out of the drawers or cases. And I presume that there are none entitled to such examinations, except those who know what injury objects will receive, if not taken care of. But there is generally a proper servant that goes along with visitors to attend to that. I have also seen persons allowed to sit down and write a description of some article.

Has this privilege ever been forbidden in the Museums to which you allude?—I have never heard of this privilege having been forbidden at all; nor can conceive that it would be forbidden.

Are you aware that it is forbidden in the College Museum?—There is a case in point. Dr. Brewster acquainted me (if this information can be received in evidence), that he was obliged to send to the Continent for some specimens of Mineralogy, although similar specimens were absolutely in the Collection of the University.

Dr. Brewster mentioned that. Have you anything farther to communicate?—No.

We are obliged to you for this attendance.

Robert Kay Greville, Esq., LL.D., F.L.S., F.R.S.E., &c. Edinburgh, was called in and examined as follows:—

Dr. Greville.

There was a letter some time ago transmitted to a Member of the Commission by Mr. Horner, written by you to him?—There was, I believe.

[*The letter was afterwards produced, and the following is that part of it which regards the Museum:*]

1, *Wharton Place*, 25 *December* 1826.

"Dear Sir,—When we were conversing together a few days ago, I alluded to some circumstances connected with the Museum, which you requested me to put upon paper. As some of them are not generally known, the Commission may not have directed its attention towards them. I therefore comply with your wishes, and can have no objection whatever to the Commissioners seeing this letter.

"There are three means of obtaining admission to the Museum.

"1. Any person may enter by paying half-a-crown.

"2. Students actually attending the Natural History Class, are admitted *gratis*, once or twice a-week. This privilege has created universal discontent among the other students, on the ground that they have all an equal right to be admitted *gratis*, since Professor Jameson is not necessarily the Keeper of the Museum, because he is the Professor of Natural History.

"3. Annual Guinea Tickets of admission may be procured under a certain condition; namely, the applicant must have attended the Natural History Class two sessions. It has been observed, that this rule reduces a great public Collection to an appendage to the Chair of Natural History, and seems to sacrifice its general utility, in order to secure a greater emolument to the Professor. The fact that any lady may purchase an annual ticket, appears to confirm this.

"The evil effects of the above system are these:—Those persons who are least likely to make real scientific use of the Museum, are most freely admitted—students engaged with the *elements* of Science. They will doubtless make a good use of it, but it will be only in an elementary point of view.

"2*dly*. A scientific individual, who wishes to consult the Collection frequently, if he has not attended the class, has no means of obtaining admission, except by paying 2*s*. 6*d*. every time,—a very serious obstacle. Even signed orders would do very little towards removing this evil.

"3*dly*. The whole arrangement is brought too much under the control of one individual. As a great part of the Collections is out of sight, it should be so managed, that any of these might be seen and consulted under proper restriction, without application to the Head-keeper. There are in this country, as in others, first-rate Philosophers, who, in consequence of unfortunate personal opposition, would never make such application, and yet be glad to refer to such a repository. Some regulations in respect to these matters should be printed; for reports are unfortunately in circulation, that the Museum is chiefly for show, and that it is only by favour it can be practically consulted."

And among some other subjects, there is some information relative to the Museum of the University, particularly in regard to the system of access to it. We understand you have some information now to give us?—I forget at present the exact contents of that letter; but I be-

667

University of Edinburgh.

Dr. Greville.

25 January 1830.

lieve the access to the Museum, at the present moment, to be the same as it was then; and am of opinion that some alteration is necessary. Is it expected that I should detail my reasons?

Yes.—The mode of access appears to me to exclude individuals in a very effectual manner from making any scientific use of the Collection. In making this and the following observations, I beg that I may be understood to speak only of the Museum Establishment, and without any motive beyond the benefit of Science. I am upon friendly terms with Professor Jameson; and I wish to bear witness to his exertions. When he was nominated to the Chair, it may be said that there was no Museum at all, except a few stuffed birds, some shells, fossil horns, and a small number of other articles, partly the remains of Sir Robert Sibbald's Collection. He devoted himself unremittingly for two or three years, prior to his first Course of Lectures, to the formation of a Collection; and was at very considerable private expense in improving it; and without him the present Museum would never have existed. But to return to the subject in hand. It is very impolitic to arrange the admission in such a way, that a person who wishes to enter for Scientific purposes, shall be taxed in the same manner with those who merely seek an agreeable lounge. Your Lordship is aware that a gentleman cannot obtain an annual guinea ticket, without having previously attended two Courses of Lectures delivered by the Professor of Natural History, the fees for which amount to about nine guineas. Ladies, who of course cannot attend these lectures, procure annual tickets at will—a mode of arrangement which certainly gives the fair sex an advantage over the gentlemen—a fact scarcely to be credited, when we are speaking of a Scientific Institution. I offer my remarks under the presumption that the Museum Collection is a public one, although I am ignorant how far it may be considered in that light. I know that Professor Jameson has a pretty large Collection, chiefly minerals, his own private property, deposited there. The Collection of the Wernerian Society is also there deposited, according to one of the laws of the Society, for the use of the Members. But Dr. Gillies found, upon application at the door of the Museum, that there was no regulation for the admittance of the Members. Some articles in the Museum belong, I believe, to the Town-council, others to the University. A large proportion is unquestionably (I should think) public property, viz. the articles brought home by Scientific Expeditions, by Captain Parry, Captain Franklin, &c., and presented by Government—also the vast number of articles contributed by individuals. It will be recollected that many years ago Professor Jameson published circulars, on the part of the Museum, and that Collections directed to the Museum were allowed, by a special order, to pass the custom-house duty free. Every thing thus obtained is surely public property. It is much to be desired that the several properties above-mentioned should be identified; and that if private property continue to be deposited in the Museum, it should not interfere with the right of access which the public have to what in one sense belongs to them. The Collection already suffers from this cause—that is, individuals have begun to decline communicating additional specimens, on account of the closeness of the system of management. In this place I may also mention that, in consequence of donations not being acknowledged, persons abroad have little encouragement to exert themselves. In warm climates it requires some energy, patriotism, or love of Science, setting aside expense, to prepare and send home specimens in Natural History; and if no acknowledgment be returned, a good correspondent is lost, and the Museum seriously injured. I do not know to whom this duty falls; but it is one that should be punctually discharged. From some cause or other, or rather from a combination of causes, I regret to say that the College Museum is very lightly esteemed on the Continent. Being interested in everything connected with Natural History, and having been for some years a resident in Edinburgh, I have often been made sensible of this, and candour has compelled me to condemn, when I would gladly have found cause to defend. I beg to add that, to the public at large, a fine room filled with showy objects fulfils one of the intentions of a Museum; but that it is those only who are directly or indirectly connected with Science, who can appreciate its higher and full value. *That* value, however, rests upon freedom of access; and, on this account, the Museum of the *Jardin des Plantes* at Paris, and the German Collections, deserve the high encomiums universally bestowed upon them. The British Museum in London is free, as far as concerns admission at the door.

Are you aware of any instance of persons withholding contributions on the ground of mismanagement?—Various instances have come to my knowledge; one in particular occurs to me at this moment, in which a lady of some rank told me she would send nothing more. It was for neglect of what had been previously sent. My friend Dr. Gillies, who is in the next room, affords a stronger example, as he will be able himself to demonstrate to your Lordship. There is another Collection which forms an integral part of a General Museum of Natural History, concerning which, with your Lordship's permission, I will say a few words. I allude to the Herbarium of the University. Upon this subject I have derived much of my information from Mr. Neill, within a few hours. For thirty years, boxes and packages of preserved specimens of plants lay unopened in the Old College Library. Some were from Dr. Roxburgh, author of a splendid work on the Plants of Coromandel, and therefore extremely valuable; others were said to be from Mr. Forster, who accompanied Captain Cook in his last voyage. As it was highly desirable that these Collections should be put into some order, Dr. Rutherford, the then Professor of Botany, applied to the Magistrates for funds to enable him to do so, but without success. When the internal arrangements of the New College were made, the Commissioners acquiesced in the necessity of setting apart, and fitting up a room for the reception of an Herbarium—and this has been done in a very complete and perfect manner; but still there are no funds, and all the packages remain piled upon each other, and their contents useless, or a prey to insects. Two years ago, Dr. Graham, the present Professor of Botany, made an application to the Town-council for a salary to enable him to appoint a Keeper of the Herbarium, and for an additional sum to purchase paper, &c., in

University of Edinburgh.

Dr. Greville.

25 January 1830.

order to arrange the specimens; but the Magistrates had no funds at their disposal, and the application was unattended to. The known condition of this part of the Natural History Collections has apparently been the occasion of a great loss to the University. When the East India Company's Botanist, Dr. Wallich, arrived from the East Indies, with the most extensive and valuable Collection ever brought together by one individual—the whole amounting to 25 tons weight—he addressed a communication, by order of the Company, to the University, through Dr. Graham, making it an offer of a share of the Vegetable treasures in their possession, to the amount of 2,000 species, or more. Upon the receipt of this letter, Dr. Graham again applied to the Magistrates for a grant of a salary of £40 or £50 to a Keeper of Herbarium, without which, he observed, it would be useless to accept the munificent offer of the East India Company. The Town-council, however, at the suggestion of Mr. Neill, then a member of Council, accepted the Collection, and a letter of thanks, signed by Lord Provost Brown, was communicated by Mr. Neill, at the request of the Council, to Dr. Wallich. To this letter a favourable communication was returned by Dr. Wallich, on the part of the Directors of the East India Company. In the mean time a Committee, consisting of Dr. Maclagan, Mr. Wood, and Mr. Neill, to whom the matter had been remitted, reported that a small sum of money should be granted for the purpose of keeping the Collection from farther injury, which was agreed to by the Lord Provost, but which, I believe, has not been acted on. No parcel, however, has been received from the Company by the University, although I, a private individual, have already had three, and I fear this neglect must be attributed to the cause I have already assigned.

How long ago was it when the matter was spoken of in the Town-council—was it a year? —In the spring of last year. I may observe farther, on the subject of Collections of this description, that they are become of great importance, since Botany has assumed a more philosophical aspect, and the greatest Governments are evincing an anxiety to form them. The only remedy, to rescue our own University from the disgrace into which it has fallen in this matter, is to appoint an officer, with a moderate salary, to keep the Collection in order. In the *Jardin des Plantes* at Paris, this duty is even performed by a female. The Museum department, generally, is in the same situation as was the Botanic Garden a short time ago. Government removed the latter to its present situation; but its original funds were totally inadequate to meet the necessarily increased expenditure, and at length £300 or £400 a-year additional were granted to it. The extended establishment of the Museum likewise demands some increase of funds to keep it up with due credit. Indeed, without some increase, I apprehend it would be impossible to do it common justice.

Have you had free access to the Museum when you desired it?—I have never had free access. Having attended two Courses of Natural History, I obtained an annual guinea-ticket for one season—ever since, I have always paid my 2*s*. 6*d*. But if your Lordship means free access to the articles in the Collection, I must say I never sought access to them, except in one instance, and that was, I think, about a twelvemonth after the Museum was first opened. I wished to make some drawings for publication of some new things, and was refused, on the plea that the University itself intended to publish the Novelties in a work of its own, similar to the French *Mémoires du Museum*. It is sufficiently well known that there is no access to the articles, except by favour of the Keeper of the Museum; and I can bring forward one fact to prove that a change in the present management is necessary. Your Lordship probably knows that Dr. Brewster and the Keeper of the Museum are unfortunately not upon good terms, and are Editors of rival Journals. Dr. Brewster was occupied some time ago in preparing for the press a History of Mineralogy, in which his peculiar discoveries in Crystallography were to be illustrated. He obtained materials from all quarters, but confessed to me that access to the Collection in the College Museum would be of the most essential use to him, but that, as he could only see it by favour of the Keeper, he would not subject himself to a refusal. If I may be permitted to express my own private opinion in regard to the alterations requisite in the present management, I would submit—

1. That the general admission-money should be reduced to 1*s*. I believe that a larger sum would thus be taken in the course of the year; and, being the usual demand in London and elsewhere for most exhibitions, the public would have no reason to complain. The annual guinea-tickets I would do away with.

2. All Foreigners should be admitted free, Professors in Universities, the Members of the Royal Antiquarian and Wernerian Societies of Edinburgh, and individuals seeking access to specimens for scientific purposes. Contributors to the Collections (whose names should be registered) should possess a special ticket of free admission, to be procured from the sub-keeper.

3. The students of the Natural History class should retain their present privilege of free admission twice a-week. The other students, at least those occupied with Physical Science, should have free admission once a-week.

4. Access to articles should be freely given for scientific purposes. The sooner new subjects are published, the better for science, and surely the better for the Museum. But if there be a work especially devoted to illustrate the Museum, by all means give it the preference. The very handsome publication from the pen and pencil of Mr. James Wilson, is the only work into which the objects of the Museum find their way; and even Mr. James Wilson does not draw his materials from the Museum so much as from other sources. Articles should not, without express permission from the Head-keeper, be removed from the Museum; but every facility should be afforded for making descriptions and drawings. I remember the Principal of the University telling me repeatedly, while the arrangements for the Museum were in progress, that accommodations were to be provided for those who wished to make drawings of specimens. Access should be had, through the sub-keeper, for all ordinary purposes, and he should be always in attendance.

5. Donations should be punctually acknowledged by the Keeper or Sub-keeper; and the name of the Donor, if possible, should be attached to the gift. Annual Reports should be published, as much for the sake of gratifying contributors as for methodising the acquisitions.

6/19

University of Edinburgh.

Dr. Greville.

25 January 1830.

6. A Synopsis of the contents of the Museum should be published, similar to that of the British Museum, which has reached a twenty-fifth edition. This would induce people to repeat their visits.

7. A respectable Sub-keeper should be appointed; but to accomplish these useful purposes, additional funds would be necessary.

Is there anything else you have to mention to us?—Nothing more occurs to me at this moment.

Will you allow me to ask, as partly connected with the subject, is the admission to the Botanic Garden on the same footing?—No. Individuals gain access with the greatest ease.

But have they tickets from Professor Graham?—That is the regular mode, and the tickets are freely granted; but a respectable person, presenting himself at the door, is generally admitted in the most liberal way. The new plants, as they come into flower, are described and published by the Professor of Botany; and therefore access to the plants in the Garden, for the purpose of publication, cannot of course be had, without express permission from the Professor.

You do not understand that any injury is done to the plants and articles, or anything?—No. Even when Dr. Graham delivered popular Lectures in the Garden, Mr. M'Nab only complained that the time of his men was taken up with keeping a general watchfulness over the Garden.

And you are not afraid of evil consequences on their being permitted to attend the Museum for 1*s.*?—Not in the least. But if any check were required, an order might be rendered necessary, as is practised in the Zoological Society of London. The person who obtains the order, pays 1*s.* at the gate of the Garden and Menagerie. In this way the Zoological Society obtained some thousand pounds last year. All the resident Members of the Medical Faculty —of the Learned Societies, &c. &c., might be empowered to give orders to the Museum, subject to the payment of 1*s.* at the door, which would be a kind of security for the respectability of the applicant. But I am sure this would not be necessary. In the British Museum, where people are admitted without any payment at all, there is no complaint; and the simple form of admission there would do for the Museum here.

Dr. *Gillies*, late of Mendoza, in South America, was called in and examined as follows:—

Dr. Gillies.

We understand you have been prosecuting scientific subjects for some time, and that you have some communications which you could make to us relative to the Museum of the University of Edinburgh?—I have had very little direct communication with the College Museum during a number of years, having been principally resident abroad; but have, on former occasions, been a contributor to the Museum, and my evidence will principally tend to point out those inducements held out to our countrymen and others, resident in our own or foreign countries, to exert themselves in contributing towards the increase and value of that Collection.

Did you formerly contribute to the Museum?—I always endeavoured, until a certain period, to contribute to the Museum to the best of my abilities; and, besides other things, on my return from the Mediterranean in 1816, I gave some Minerals, which I brought from the famed iron-mines in the island of Elba.

In what manner did you transmit them?—I brought them with me to the Museum, on my return to Edinburgh.

Did you give them to Professor Jameson?—They were delivered to Professor Jameson, in the impression that they were to belong to the Museum—not having been aware, until lately, of any separate interest which that gentleman had in forming a Collection distinct from that of the College Museum, of which he was the Regius Keeper. I at that time, and long afterwards, believed that the exertions of Professor Jameson were wholly directed to the care and augmentation of the public Collection.

Have you been abroad since that time?—I went abroad again, about ten years ago, to South America; and resided nearly nine years in that country.

Did you make any collections there?—When I left this country, I was impressed with the desire of doing everything in my power to obtain for the College Museum whatever objects of Natural History might seem to me most acceptable, as I viewed that Establishment, to which I always previously had free access, as one of such national interest, that it was the duty of every Scotchman, and more especially those who were at all fond of Natural History, to contribute all in their power towards its increase and importance. Accordingly, on my arrival at Buenos Ayres, where, owing to the disturbed state of the country, I was detained nearly six months, I endeavoured, as far as my health permitted me, to procure specimens of Birds for the Museum; and all that I obtained, were transmitted to Professor Jameson, along with specimens of Rocks, &c., from New South Shetland, which had been discovered only a few months before. For these last specimens I was indebted to the kindness of Admiral, then Commodore, Sir Thomas Hardy, from whom I requested them expressly for the Museum, and who conferred on me the additional favour of sending the box free of expense through the Admiralty. On its reaching the Museum, owing, as I have been informed, to the absence and subsequent indisposition of Professor Jameson, it remained a considerable time without being opened, on which it was found that some insects had gained admittance to the interior, and had rendered the skins of the Birds useless. On my proceeding into the interior of the country, and afterwards becoming resident at Mendoza, I obtained possession of a variety of objects of Natural History; but was prevented sending them to the College Museum, as I had intended, by the contents of a letter written to me by a friend in Edinburgh, giving me an account of the new regulations observed at the Museum, stating, that it had been rendered so

University of Edinburgh.

Dr. Gillies.

25 January 1830.

inaccessible to the public, and to men of Science, as to have become comparatively useless; and that there was a general complaint among such persons as had contributed to the Collection, that no distinction was made between them and the public in general, in consequence of which they had resolved to exert themselves no farther in aid of the Museum. On this occasion, my friend, aware of my previous intention, recommended me in the strongest terms neither to make any farther personal exertions, nor incur any additional expense, in getting anything for the Museum. From that time I ceased to preserve any object of Natural History for that Establishment; and, notwithstanding the numerous opportunities which I enjoyed during a long residence in that country, and various journeys which I made, of procuring Animals, Birds, and other interesting natural productions, I was induced to preserve comparatively very few of them, and such as I gave away, were otherwise disposed of. Among these I may mention a specimen of an exceedingly rare animal, the *Chlamyphorus truncatus;* of which I knew there existed only one imperfect specimen in Philadelphia, and which had never been seen by any Naturalist in Europe. This specimen was, at my desire, presented by the British Consul-General at Buenos Ayres to the Zoological Society of London, in whose Museum it is now to be seen. This very interesting Specimen would certainly have been sent in preference to the College Museum, had not every inducement ceased to exist, which could so influence an individual circumstanced as I then was. I had likewise, at different times, in my possession, various live Birds and Animals, some of them very rare, which would have been preserved and sent, but for the causes already mentioned. On returning to Great Britain, I brought with me everything in my possession at all likely to be interesting to men of science, none of which I have any intention to send to the Museum, while regulated as at present. Last winter I presented the Wernerian Society, of which I am a member, with some specimens of birds and animals, which I understand have since been placed in the College Museum, agreeable to a law of whose existence I was then ignorant, and which is as follows:—

"That all specimens of objects of Natural History presented to the Society be deposited in the "Museum of the University, the members of the Society retaining the right of inspecting them at "proper times."—*Laws of Wernerian Society.*

Do you know whether any other persons have been prevented from sending donations to the Museum?—A variety of occurrences connected with that establishment have come to my knowledge, which have satisfied me that, with scientific men, as well as others favourably situated, and disposed to contribute, there exists a general feeling, that they have no inducements, either public or private, to send donations of objects of Natural History to the College Museum; that establishment having been rendered so inaccessible to the public, as well as to scientific men, and because they are aware that, on their visiting Edinburgh, they would enjoy no further privilege in visiting the Museum than that possessed by the public generally. Although I have not recently had any communication with any of the individuals alluded to, yet I have from authorities which I cannot doubt, that, exclusive of such as are abroad, there is one gentleman now in Edinburgh, and several others in Orkney, who have liberally contributed to the College Museum, but who, for the reasons already stated, have no inclination to do so again.

Were these articles which you presented to the Wernerian Society, not intended to be given for the use of the Museum?—When I presented them to the Wernerian Society, I did not know of the existence of a law of the Society obliging it to deposit them in the Museum. They were not intended, on my part, as a present to the Museum, but to the Society, in whose possession they might be rendered useful to the public.

Was your unwillingness to contribute them to the Museum, owing to their not being acknowledged, or to your being denied free access?—My principal motive in contributing having been, from the commencement, the hope of being useful to science and to the public, I feel unwilling to give anything more to an institution which I considered as having ceased to be useful. I never received any acknowledgment for what was sent from Buenos Ayres, such as I have received on such occasions from similar institutions. I have recently, however, been informed, that to the inquiries made by a near relative, whether it had been received, a reply was sent in the affirmative. As an individual who had contributed, and also as a Member of the Wernerian Society, I have felt it as a grievance, that I had no freer access to the Museum than the public generally, and took an opportunity of stating such to be my feeling to the Secretary of the Society, who expressed his surprise that I had not been admitted. I never, however, made any direct application to Professor Jameson for admission, although I have expressed to him my opinion in favour of a more liberal system of admission, citing at the same time the Zoological Society of London, as an example of a Society whose prosperity was mainly to be attributed to the greater accessibility to their collections. I have, however, very recently gone to the Museum door, and inquired of the door-keeper whether, as a member of the Wernerian Society, I was permitted to visit the Museum on any other footing than that enjoyed by the public generally; and in reply was informed, that he had no orders to admit any one, except such as paid half-a-crown, or had an annual ticket, or a special order for admission from Professor Jameson.

Is it long since you returned to Scotland?—I returned to Edinburgh from abroad in September 1828.

Is it matter of complaint that no account has been published of the articles sent to the Museum?—It is certainly a subject of complaint with those who have contributed to the Museum, that no public acknowledgement is made of such Donations, and that, except in some few instances, the names of the Donors are not attached to the specimens presented, as is customary in other similar institutions. I do not even know that there is any correct register

671

University of Edinburgh.

Dr. Gillies.

25 January 1830.

kept of Donations, and have been informed, on good authority, that no one, excepting Professor Jameson, can point out what does actually belong to the Museum, from those things which are the private property of that gentleman; the whole being so intermixed, that, in the event of the Professor's decease, his heirs might, with seeming justice, lay claim to many articles which are public property. As a contrast to the present system of the College Museum, I may state what my own experience has pointed out to me, of the maxims which regulate the proceedings of the Zoological Society of London, and to which, in my opinion, is greatly owing the unexampled increase and prosperity of the Museum and other establishments of that Society. Any member of that Society can personally introduce at any time one of his friends, free of expense, to the Museum and Menagerie, and can give an order of admission in writing to any others, who are admitted on the payment of 1*s.* each to every one of these two establishments. Donors and benefactors to the Society are, to a certain extent, and according to circumstances, permitted to enjoy the privilege of free admission to the Museum and Menagerie, as I myself experienced while in London, in return for my having presented the Society with one preserved animal, and one live Parroquet, both of which were acknowledged to me in name of the Society by the Secretary. Before offering such suggestions as have occurred to me, as to the most eligible mode of regulating the College Museum, so as to render it not only highly prosperous, but useful and honourable to the country, I may be permitted to mention that, in what I have stated on this subject, I have not been influenced in the slightest degree by any feeling of hostility to Professor Jameson; on the contrary, I have always felt grateful to him for favours which he formerly conferred upon me; and, on this occasion, it would be injustice to him on my part did I withhold my testimony to his great and unweared exertions in forming the Museum, and placing it in its present efficient condition as such. I cannot, however, form any correct opinion as to the part which Professor Jameson may have had in the formation and promotion of those maxims which at present regulate the Museum in its relations with the public. The arrangements which appear to me the most likely to ensure the prosperity of the Museum, and the satisfaction of scientific men and the public, are as follows:—The admission of all who apply, on the payment of 1*s.*, and of children, under a certain age, at half that sum. That all students of the University shall, at the time of matriculation, be enabled to purchase at a moderate rate (perhaps 5*s.*) an annual ticket, which will entitle them to free admission to the Museum at certain hours; and that not even the students, attending the Natural History class, be admitted, without possessing such ticket of admission. That the members of such learned societies as are in the habit of contributing to the Museum, such as the Royal, Wernerian, and perhaps Antiquarian Societies, should have free access to the Museum, on the annual payment of a moderate sum to the funds of the Museum. That a similar privilege be granted to such persons as require free admission for the prosecution of scientific inquiries; and that a discretionary power be exercised towards donors and other benefactors to the Museum, granting to such, according to the extent of their donations, a certain number of free admission-tickets for themselves and friends. That a properly-qualified person be employed, on whom will devolve the immediate care and responsibility of the Museum, and the charge of all its interior details, the necessary correspondence and acknowledgment of donations, a list of which he will keep in a register, to be published annually, under the auspices and direction of the Regius Keeper of the Museum, aided by a Commission, formed, by the annual nomination of one or more of their members, from those public bodies most directly interested in the prosperity and usefulness of the Museum, such as the Senatus Academicus, the Town-council of Edinburgh, the Royal and Wernerian Societies.

Mr. *Henry Hulme Cheek*, Gardner's Crescent, Edinburgh, was called in and examined as follows:—

Mr. H. H. Cheek.

The Commissioners have received a Petition from you, which has been sent to this Committee: we wish to know whether you have anything farther to state to us relative to that subject?—I have little to add to the facts which I have stated in my Petition, and in the Strictures on the College Museum, which I published in the Fourth Number of the Edinburgh Journal of Natural and Geographical Science, as the additional information I have obtained will have been communicated to you by the Gentlemen who have already been before you. But there is one fact of importance to which I am desirous of calling the particular attention of the Committee. Though there is a general feeling against the mode in which the affairs of the Museum are at present conducted, and a conviction of its inadequacy for the purposes of Science, every one is aware, that under the present system it cannot be improved. To render the Collection useful to scientific men, it would be necessary that there should be some responsible person in the capacity of Under-Keeper, to take immediate charge of the Specimens, and whose duties should be exclusively confined to the Museum, and independent of the private interests of the Regius Keeper. I am led to suggest this restriction, in consequence of having understood that the late Under-Keeper, though his salary was paid out of the funds of the Museum, had a variety of duties imposed upon him, in his agreement with the Regius Keeper, which were totally unconnected with the affairs of the Museum. To be explicit, I allude principally to the time which was occupied in making translations, &c., for Mr. Jameson's publications. It would be necessary that an Under-Keeper should be appointed, with an express salary and stated duties, by the same authorities as have the appointment of the Regius Keeper; or, if appointed by the Regius Keeper, that his services should be confined to the Museum, and that he should not also stand in the capacity of "Private Secretary" of the Regius Keeper (a title which I believe Mr. Jameson applied to the late Assistant), or be in any other respect under his control. Eight hours daily would

University of Edinburgh.

Mr. H. H. Cheek.

25 January 1830.

probably be sufficient for the mere actual labour which the Museum requires; and, from what I am able to learn, an individual sufficiently acquainted with Natural History, and with the management of a Museum, might be engaged at a salary of within £100 a-year. And I am convinced that, if Government would appropriate that sum to this purpose, the Edinburgh College Museum, other contingent regulations being adopted, would acquire an usefulness and a character which it does not now possess, and a lasting benefit would be conferred on Natural Science. The duties of such an office would be, generally speaking, constant examination and care of the Specimens,—registration of Donations in the catalogue, with the names of the Donors,—acknowledgment of the receipt of Presents,—naming and arranging additions to the Collection,—keeping the accounts, and conducting the general correspondence of the establishment, under the superintendence and direction of the Regius Keeper. And further, if it be thought proper to permit scientific men to make such use of the Museum as would be necessary for the purposes of publication, the Under-Keeper would have to give out Specimens to be conveyed to a room set apart for that use, on a plan analogous to that of the Reading-room in the College Library, and to take care that they are not injuriously treated.

Then you don't think that even men of Science should be admitted to have indiscriminate use of the Specimens, without superintendence?—Certainly not. Precautions would be necessary with Scientific men as well as with other individuals. For instance, when any one is desirous of receiving an object for examination, a ticket should be delivered to the Under-Keeper, with the name of the Specimen inscribed, and its general condition should be observed before it is given out, to avoid misunderstanding with respect to any injuries which it might appear to have received. There is not, however, at present any person in the Museum to undertake these duties, the late Assistant having a short time ago resigned, from his inability to perform the numerous duties which were appended to his office, and from the inadequacy of his salary to the time employed. One consequence of this circumstance is, that many specimens (particularly of Birds), which were infected before he left the Museum, are now falling to decay. It cannot be expected that the Regius Keeper can either devote the time, or undertake the labour, necessary for their preservation.

Are you acquainted with the regulations or the terms of admission of any of the Museums on the Continent?—I have not been abroad, but have visited several Museums in Britain, though not with an express scientific object. I have always met with the greatest facility of admission, none of them having required so high a fee as the Edinburgh College Museum. To the Hunterian Museum of Glasgow, entrance is obtained by the payment of one shilling, and I have on all occasions found great numbers of visitors, during those days on which the public are admitted. The charge made at Bullock's Museum was one shilling, though it is stated that the exaction of half-a-crown is imposed on visitors to the Edinburgh College Museum at Mr. Bullock's recommendation. If this method were likely to produce the greatest revenue, why did he not himself pursue it? And, lastly, the Zoological Society of London have followed the same liberal plan, whence, during the year 1828-9 (according to the report of the Council) there resulted £4017. 16*s.* for admissions to the Garden alone. Moreover, I am convinced that, if the entrance-money to the College Museum were reduced to one shilling, the sum collected would infinitely exceed the present revenue from that source, were it only on account of the favourable disposition which would be excited in the public mind. I need not mention to you that to the British Museum the public have *free* admission on appointed days, and in Dublin, Manchester, &c., it is only necessary to obtain a ticket from one of the subscribers.

Where there are such numbers resorting (as in the British Museum), is there no hinderance nor inconvenience arising in the examination of the Specimens?—I have only been at the British Museum on public days, without any special order for the Examination of the Specimens, so that I cannot judge of their accessibility. But the number of scientific men frequenting a Museum for such purposes (specially in this city) would never be so great as to cause inconvenience.

You state, in your petition, that Professor Jameson said that the College Collection was his private property; did he state any reasons?—No: he merely made the remark, and turned away. The circumstances were these:—the answers the Professor made to my frequent requests for admission to see a particular specimen which I mentioned to him, gave me the impression, that he meant to be in personal attendance, whilst I made the necessary Examination. Aware that his avocations would not permit of my detaining him for this purpose, I inquired, whether it was not possible for me to see the Specimen, without giving him the trouble to attend; when he replied, "No Sir! it is not; it is my private property;" and made use of other uncourteous language, which might have been avoided. If the Professor had not promised me admission, at the time I took out the ticket to his class, I should not have been so much disappointed at his refusal; but at the above period I had been induced to commence printing a paper, in consequence of the expectations which he had previously given me reason to entertain, the publication of which I should not otherwise have undertaken,—and I was then undergoing pecuniary loss, by reason of the delay in procuring admeasurements of the Skeleton, which I was about to describe.

And have you been able to publish the measurement of that Skeleton at all?—No, I have not.

Was it ever published by any other person?—No. I may mention that Dr. Knox, who lately read a paper on this subject before the Royal Society, was desirous of examining the Skeleton, and wrote a note, which was delivered into the hands of Professor Jameson, requesting permission to see it; but I am informed that he has never received any answer.

What sort of an animal is it?—It is a Dugong—a marine animal of the whale tribe.

And the same difficulty has been experienced by other gentlemen possessing tickets to the

1873

University of Edinburgh.

Mr. H. H. Cheek.

25 January 1830.

class of Natural History?—Yes. But it is so generally known that obstructions are placed in the way of the scientific student, that few requests of this nature are made. Any one would rather pay the half-crown than submit to the certainty of a refusal; and thus none but those who have immediate objects, would be led to request admission.

But in getting access by the half-crown, can you see this Skeleton?—No. It forms part of a considerable collection of Skeletons, Birds, &c., which is deposited in a suite of rooms over the porch of the College, called the New Museum, and which is closed to the public. The reason at first given to me by the Professor for refusing me admission to these apartments, was, that "the Commissioners had not yet authorized him to throw them open."

Once before, about two years ago, being then a pupil in the class of Natural History, I requested permission to visit this room, for the purpose of seeing some preparations of animals from the Firth of Forth, presented by Dr. Grant. The Professor several times told me that I should see them at some future period, and, after long delay, at last refused me admission, remarking, that I had better go to the shores and study the animals in nature, which would make much more impression on my mind. I observed that, in this case, the advantages of a Museum were not very apparent.

It would appear that tickets are sometimes given gratuitously to certain individuals: have you occasion to know that any gentlemen are so admitted?—Yes; I believe that a gentleman of the name of Adams has free admission at pleasure, even to the New Museum; and I have learned that, since this subject has been canvassed in the public papers, the Professor has given a gratis ticket to Mr. Maclaren (understood to be an Editor of one of those newspapers), the first which this gentleman ever received. Mr. James Wilson, author of the "Illustrations of Zoology," a publication which appears as the organ of the Museum, has also free admission. Sir William Jardine and Mr. Selby have likewise a sort of nominal free entry, but all as a matter of favour and obligation. These gentlemen, with the Professors, the Town-council, and foreign Professors who visit this University, are the only individuals to whom (as far as I know) free admission is granted. I am aware that those gentlemen who have made donations to the Museum, cannot obtain admission to see them, without the payment of the customary exaction. And I may here add that, even when they have purchased admission, they may not be able to recognise the Specimens they have presented, as, excepting in a few instances, the donor's name is not attached, and thus a great inducement to present Specimens is lost. It is further remarkable, with respect to free admission, that though, by a law in the code of the Wernerian Society, all Specimens presented to the Society shall be deposited in the College Museum, *for the use of the Members*, these gentlemen, on applying at the door of the Museum, are informed, that they cannot be admitted, as there is no particular order to that effect.

Did we understand you rightly in stating, with reference to the Journal of which you are one of the conductors, that you undertook it, partly in the expectation of publishing the Specimens in the Museum?—I did not directly say so. It certainly was not undertaken with that object; yet the conviction existed in my mind, that the Natural History department of such a work could not be effectually conducted in a town where there was not an accessible Museum. London would have better accorded with such an undertaking, if the splendid Collection in this city could not be made of public utility.

Had you acquainted Professor Jameson that you were engaged in that work at the time that you made the application to him?—I had previously sent him a copy of the work.

Have you attended the Class of Natural History previously to the present Session?—Yes; I attended the Class of Natural History the Winter before last.

Addition made on revising Evidence.

February 1, 1830.

On revising my Evidence, and referring to the observations contained in the strictures on the condition of the College Museum, to which I have alluded (*Edin. Journ. of Nat. and Geog. Science*, No. IV. p. 269), I find little alteration or addition necessary.

It may, however, be worth remarking that, during the course of last week, Professor Jameson considered it expedient to extend to his pupils another day of admission to the Museum,—on Mondays, as well as Wednesdays and Saturdays, the public rooms are now open to the class of Natural History. Though the fact is of little importance, it is pleasing to see any allowance of the impropriety of the old system.

With respect also to the admission of all matriculated Students and of Scientific men, I feel assured that, as the funds of the Museum are so limited, there would not be a murmur raised by a single individual against the demand of a reasonable annual subscription, analogous to the matriculation fee for the Library, say of five or ten shillings; and from this source, with the shilling admissions of the public, a superabundant revenue would, I doubt not, result. The only difference which would exist between the Student and the man of Science (using this term for those who have an express Scientific object) would be, that the former would merely require admission to the public rooms of exhibition, whilst the latter would have need of unreserved access to the whole Collection.

It was suggested, in the remarks above referred to, that two or three Under-assistants would be required to carry into effect the proposed improvements; but, from inquiry, I learn that one individual, properly acquainted with his duties, and devoting his undivided attention to the Museum for eight hours daily, would amply suffice.

Finally, I only feel it necessary to request those Members of the Committee, who may have occasion to peruse the strictures I have published, to take into consideration the circumstances by which they were called forth, and to make allowance for any superfluous harshness with which they may not be able to sympathize, from not having met with similar treatment. (Signed) HENRY H. CHEEK.

In reference to the Fee charged for admission to the Hunterian Museum, Glasgow, Mr. Cheek produced a Certificate by Mr. Couper, Keeper of that Museum—of which the following is a copy:—

University of Edinburgh.

Mr. H. H. Cheek.

25 January 1830.

"*To Dr. Gillies,*

"I hereby certify to you that the sums collected, during the seven last years that the Ticket of admission to Hunter's Museum was at *Two Shillings*, were—

"For the year 1817,	£160	0	0	For the year 1821,	£130	0	0
" —18,	210	0	0	" —22,	180	0	0
" —19,	210	0	0	" —23,	200	0	0
" —20,	180	0	0				

Ticket, One Shilling.

"For the year 1825,	£240	0	0	For the year 1828,	£215	0	0
" —26,	195	0	0	" —29,	200	0	0
" —27,	190	0	0				

"I consider it but fair to state that, whilst the price of a purchased Ticket amounted to two shillings, 14 Professors had the privilege of granting fifteen gratuitous Tickets each. This was abolished when the price was fixed at one shilling.—In great haste,

(Signed) "Wm. Couper."

Mr. William Ainsworth, M. R. C. S. E., was called in, and examined as follows:

Mr. W. Ainsworth.

We understand you are one of the conductors of the Edinburgh Journal of Science?—Yes.

And that you can give us some information on the Museum?—I was attending the class of Natural History in Edinburgh about three years ago, and was at that time on all possible occasions in the Museum.

Did you, on one occasion, apply to see some Skulls, and meet with a refusal?—Yes. My first application was postponed, and my second refused. Applications to examine some *marbles* and *insects* met with a similar reception.

And you were at this time a Student in the Natural History class?—Yes.

Were these specimens in a private room?—I believe not.—If I may be allowed to make some observations, I shall do so. The difficulties which are met with in studying Natural History, as a branch of the Liberal Sciences indispensable to the medical man, and of importance to every well-educated gentleman, are so great in this city, that many are entirely deterred from its pursuit, and a continuation of the same circumstances might lead to an almost entire neglect of this interesting subject. The system pursued with respect to the Museum of this University offers a fearful contrast to the liberal manner in which other Museums are thrown open to the Student in London and in Paris. Since I left Edinburgh, I have prosecuted my studies in the latter city, and met with every encouragement. I was for a year and a half the only English Student in the School of *Mines*. The Museum, the Laboratory, and the Library, were open to me every day. Even drawing-paper and boards were supplied without expense. In the Garden of Plants, the Botanical Garden was open every day, and the Museum three times a-week to the Students, and twice to the public, making five days out of the seven. It is quite impossible to prosecute the study of Natural History with success without a Museum. A general knowledge may undoubtedly be gained from books, but a minute knowledge of Species, more especially in the mineral kingdom, cannot be gained, unless the eye is well acquainted with appearances, which it is often impossible for the Naturalist himself to describe.

Have you lately applied for access to the Museum?—No. I have only attended one course, and to become perpetual it would require to attend two, which would put me to additional expense, without offering much real benefit from the course of lectures delivered by the Professor.

Did you ever make any application that was favourably received?—Since I came back, from consciousness of the inutility, I have made no application.

Then, accoring to your experience, there is a decided contrast between this School of Natural History and the School of Mines at Paris?—Decided. On writing to the Minister of the Interior for admission into that School, my letter was immediately answered, and I was admitted in the most friendly manner; and, though a stranger, met with as much, if not more, encouragement than the French pupils.

Are you aware of any injury occurring to the specimens in this Museum?—No.

Edinburgh, Saturday, 6th February 1830.

The Right Honourable the LORD JUSTICE-CLERK in the Chair.

Robert Jameson, Esq., Regius Professor of Natural History, and Keeper of the Museum in the University of Edinburgh, was called in and examined as follows:

Professor Jameson.

6 February 1830.

In reference to the subject of the Museum, we wish to know from you, if you would have any difficulty in pointing out to the Commissioners what are the subjects that belong to the Museum, and which you declare are not private property?—This could be done, but not correctly, without consulting the various MS. documents; and these documents, as mentioned during a former examination, have been furnished to the different authorities, viz. Town-council, Exchequer, and Senatus Academicus.

Are we to understand distinctly from you, that any part of the articles presented by individuals residing abroad, addressed to you as Keeper of the Museum, and brought to the Museum, whether exhibited or not, are your private property?—No. I believe the principle is, that all property within the walls of the Museum is considered, as long as it is exhibited there, public property.

675

University of Edinburgh.

Professor Jameson.

6 February 1830.

Are you in a condition to distinguish between the articles purchased and those sent to the Museum as presents?—Yes.

In depositing the articles which you purchased, and which you still consider your private property, did you put no mark upon them, or keep no list of them?—I have done this sometimes, but not always.

Then that list will again show your private property?—The labels, lists, and other documents, will do so in part.

Your list shows your property?—There is as yet no complete catalogue, because, owing to the unfinished state of the Museum, want of time, and particularly of assistance, the various arrangements necessary for this purpose have not been completed. But it is not my present intention to withdraw from the Museum any articles which may be proved to be my private property: on the contrary, I feel disposed to allow everything of this kind to remain for the good of the University.

It is your understanding, therefore, that in the event of your death, your representatives can claim part of the Museum as your property?—They might claim certain articles as my property, providing these could be proved as such, by catalogues and other authentic documents.

In reference to the specimens, do you understand any part of the articles in the Museum, which came to the College duty-free, as your own property?—There is a difference of opinion on this point. I am disposed to think such specimens, so protected by the Crown, although sent as presents from private friends, become, in these circumstances, public property. Another opinion maintains, that all specimens sent to me as Professor of Natural History, as presents from private friends, although thus protected, are to be considered as my private property.

In what light do you view articles sent as presents to the Museum by individuals, whether in this country or abroad?—Decidedly public property, in every instance; but whether that property will be found to belong to the Town or to the Crown, that I do not know.

Are there any other articles in the Museum which you consider as the private property of other individuals?—None.

Do the articles sent you from private friends, &c., come duty-free?—These reach me through private, not public, channels.

Do they pay duty?—Formerly duty used to be paid on all articles of Natural History imported into this country: for some years the law has been abolished, or not acted on.

But suppose that such articles as these were sent—"131 birds in four packages, from Tobago, as a present to Professor Jameson, and by him to the Museum,"—do you name that as a present to Professor Jameson?—In this case I do. The gentleman who sent them was a former pupil of mine, and promised, as a return for attention shown to him, to send me specimens. A collection of birds was sent, which I gave to the Museum.

But in sending these articles, did he, for instance, state any expectation that they were to be placed in the Museum?—As far as I recollect, they were intended for me—if my memory does not fail me. In his letter accompanying the specimens he says, "to be placed in your collection," or some expression of the same description.

We understand, as to the Assistant-keeper, that you have been obliged to dispense with him of late?—Yes; our funds are exhausted.

Now, in the Returns to the Exchequer of the accounts of the Museum, £100 is entered in the last year, "for procuring subjects, &c;" what is the general nature of this expense?—I really cannot recollect at the moment. I used to give in a detailed account of these, but I believe it is not necessary to go into very minute details, as these lead to nothing. Thus, in the account for preparing a sea-horse, for example, we simply state the sum—do not enumerate the different small sums for the different articles, &c., required, as expense of preserving powder, tow and cotton, iron, wood, tanning, artificial body, eyes, stand, &c.; but the individual accounts are rendered to the Exchequer, and retained there.

What do you mean by the expense of collecting, curing, and preserving the subjects in the Museum, as stated in the Exchequer Books?—I mean the carriage of specimens, collecting of specimens, preparing such as require it, agency, &c. &c.

Therefore, are there any articles added to the Museum to which this account of expenses applies?—I think there must be, or it must have a reference to some former year.

What were the alterations that were made in the Exchequer as to the mode of accounting; and when were they made?—I do not recollect: some two or three years ago.

Formerly they used to be more particular?—Yes, in the manner already mentioned.

With regard to the articles of Natural History presented to the Wernerian Society, do the laws of that Society order them to be deposited in the Museum of the University; are we to understand that these articles, if so deposited, become public property?—I should think so. The Wernerian Society has a charter, or seal of cause, as I think it is called, from the Patrons of the University, in which charter, as well as I can recollect, there are some clauses in regard to the arrangement just mentioned.

Does that seal of cause authorize them to meet in the College?—I cannot recollect whether it is so or not. The old Natural History Society assembled there, under an old charter or seal of cause, and we understood were entitled to a room in the Museum, or to meet in the Museum itself.

Now, does this Society retain no right of property in these articles?—No; it is understood that these articles become public property.

Is there any record kept of any article that is transmitted to the Museum, and deposited there, whether purchased by you or presented to it by others?—All these things are stated in the account I formerly gave in.

Was there any record kept by yourself?—Yes, and that record was given in to Exchequer

University of Edinburgh.

Professor Jameson.

6 February 1830.

Was there any record kept of the articles which you received for yourself?—No; I don't think that necessary. I have letters to show this from my private friends.

Then there is no general Catalogue kept, whether they are sent there for you, or whether others have a share in them as well as yourself?—There was no complete catalogue; the only complete genuine one consists of a series of private letters and other written documents.

Then what was the list that you sent to the Exchequer made up from?—From these letters and written documents. I have often much trouble in ascertaining the donors: at times, cases and specimens remain for years before the donor appears, either personally or by letter, or through some private friend or friends.

Did you preserve a duplicate of that list (the Exchequer list)?—I think not. I furnished the Exchequer every year with two copies of each of these lists.

Then, in point of fact, there is no catalogue of the Museum at all?—The Exchequer catalogues—the several quarto volumes of catalogues of the Professorial collection—the six volumes quarto of Museum Reports, formerly laid before the Royal Commissioners—and the various private letters and other MS. documents, are the only catalogues we have at this moment,—which, by the bye, although not written out in a regular continued form, may be considered as forming a good record of the collections in the Museum. During a former examination, I stated the reasons why a regular systematic catalogue of the whole collection had not been made out,—one of these reasons, and a principal one, was the unfinished state of the Museum, which prevented the arrangement of the articles, and consequently the drawing out of a systematic catalogue. I, at that time, also used the liberty of urging strongly the propriety, even the necessity, not only of finishing the present rooms, but of providing additional ones.

Do not these volumes, or report-books contain lists of public as well as of private property?—You will find in these books or volumes a distinct account of the various articles whether private or public, sent to the Museum.

As far as I recollect your minute or report-books, they do not contain such accounts or description of the cases sent, as will allow of their being traced out?—The cases are regularly entered in the report-books—the address or addresses on them accurately copied into the report-book. The contents of the cases, as to condition, number, name, &c., also recorded in the report-book; so that, with such documents, there can be no difficulty whatever in tracing out any case, or collection of cases or packages, sent to the Museum.

When you receive a parcel of minerals or other specimens, by way of donation to the Museum, do you acknowledge the receipt of them to the person that sends them?—I ought to do so; and in general it is the practice to return some answer. There is an official form printed, which I despatch to those who present specimens or collections to the Museum.

Do you remember the minerals that were presented by Sir George Mackenzie, when he returned from Iceland?—I remember of a collection of pieces of rock from Iceland having been sent.

Are they not exhibited in the Museum?—They are somewhere in the Museum.

I suppose they were put in by Sir George for the benefit of the public?—Sir George's specimens, as I have already said, are pieces of rock. For these, and all similar articles, there is no accommodation at present.

Could not they be arranged, so as to show what the rock is. The whole of that collection is, we understand, quite out of sight to the public?—No; there is want of room. To display our rock collection to the public, would require at least a room 100 feet long, with glass-cases.

In your recent communications to the Commissioners, you state, in reference to Mr. Cheek's petition, that, although you did not state that the collection of skeletons was your private property, you might have done so with propriety?—I did make this statement, and felt myself entitled to make it, as, with a few exceptions, these specimens have been purchased, but not paid for.

Are you aware of the particular specimen that Mr. Cheek wished to examine?—I suspect it was a skeleton that I had been preparing; the skeleton of a dugong.

There was one received from Sir Stamford Raffles, I believe?—I believe there was, though I cannot remember at the moment. There were some articles sent by him; a good many of them very interesting.

Do you consider them to belong to the Museum or to you?—Not to me; they are public property.

Was there not a dugong among them?—I cannot at this moment say; probably there might.

Do we understand that you can make out a list of the articles in the Museum that you consider to be your private property?—I can.

Have you any idea what proportion that may form of the Museum?—It is impossible to say, without a very careful examination of the catalogues, and various MS. records contained in the Museum. I could not give the proportion off hand.

Has the Museum been in such a situation as to receive much of your private property?—Yes, but it is principally deposited in drawers and boxes, and lumber-rooms or apartments.

How is the money collected at the door of the Museum disposed of?—For the various expenses attending the Museum, as stated in the documents formerly given in to the Royal Commission.

Then I apprehend that in all the expenses of cleaning and repairing the articles, stuffing, &c. (which are part of the purposes to which the income of the Museum is applied), there is no distinction made between your private property and the public property in the Museum—

677

University of Edinburgh.

Professor Jameson.

6 February 1830.

the expenses are applied indiscriminately to both?—The whole of the expenses are correctly stated in the accounts.

But after the articles are exhibited in the Museum, all the expenses of the Museum, applicable to the whole articles without distinction, are stated, without distinguishing between the expense for those articles which you say are your property and those that belong to the public?—Yes. But the articles of private property exhibited, being principally minerals and other objects of the same description, entail no expense.

There is an expense in articles preserved from being destroyed, for stuffing and repairing birds?—Yes.

The wages of servants, the expense connected with birds, and repairing of cases in which they are exhibited, and various other articles of that description; are these all applicable to the whole specimens exhibited in the Museum, without reference to what you claim as your own, but the public?—Entirely applicable to the public collection.

Are not those which you consider to be your own exhibited to the public along with them?—No; my specimens, generally speaking, are in close cases and boxes, and therefore are not exhibited.

Are none of the articles exhibited among those which you consider as your own?—The skeletons can be seen privately, and are not shown to the public. Those articles of mine, such as skins not prepared, are not seen, being kept in boxes. Skins, prepared from the public funds, become public property, if I do not pay the public for the preparation thereof; if, however, as has been frequently the case, I employ my own domestics in preparing skins, &c., sent to me, these I would hold as my property, although placed in the public Museum.

That is just the point that we wish to come to. That is quite distinct. Then every article now exhibited in the Museum you consider to be the property of the public?—No, certainly not; a very large portion of the collection belongs to the Professors.

That is an opinion?—Not an opinion, but a fact.

That, you say, is Dufresne's collection, which the Professors consider as their property?—Yes.

Upon what principle did you apply to the Town-council for permission to open the Museum to the public?—In order to obtain means for defraying the various expenses attending the establishment, and also the payment of the annual interest on the £3,000 borrowed for the purchase of the Professors' collection.

Was that in your petition to the Town-council?—There was no petition that I recollect of.

In your application, did you state that the Professors were to retain the right of property in this collection?—I do not recollect.

When they authorized a fee to be levied, was there any minute made out or signed?—They never signed any minute that I saw.

I imagine you were present at the meeting of the Members authorizing that fee to be taken?—So far as I understand the meeting, it was of this description:—It consisted of representatives from the Exchequer, and Town-council, and the University. The whole of these concurred in authorizing me to levy 2*s*. 6*d*. of fee from each individual visiting the Museum, with a view, as already stated, of paying the annual interest of the £3,000, and all the other expenses connected with the Museum establishment. A minute of this proceeding was taken by Sir Henry Jardine; but what became of it, I do not know—I cannot find it.

And were the Barons present?—I think Baron Clerk Rattray was present.

Was the application to Government and the Admiralty for a cutter to bring home Dufresne's collection made on the part of the Professors?—I think it was done in this way:—The Town-council, as Patrons of the University, conceiving that it would be for the benefit of the University to get the collection to Edinburgh, applied for the cutter.

But, with the exception of Dufresne's collection, is there any other part of the articles exhibited to the public that is not the property of the Professors?—So far as I recollect, there are some articles which stand in a very peculiar way: there is a collection of Dr. Hutton's.

I am only speaking to the articles exhibited: with the exception of Dufresne's, are there any other articles there not public?—There are articles placed here and there, which I cannot recollect at the moment.

No articles of your own?—Yes, there are, as formerly stated.

Is your reason for saying that Dufresne's collection is the property of the Professors, merely because they signed the obligation for £3,000?—Yes.

Was not that done by arrangements with the Exchequer?—Not with the Exchequer, but with the public banks—Sir William Forbes', and other banks.

Did the officers of Exchequer use their influence with Sir William Forbes?—I think the influence of the Professors was sufficient for that purpose.

Did Sir H. Jardine take any part in these arrangements?—Yes, he was particularly active, and most useful, more so than any other individual.

And the interest was paid out of the funds collected at the doors of the Museum?—Yes. In short, that was the express purpose for opening the Museum: otherwise, it might have remained shut, as it was at the beginning. But, my Lord, you must be aware that I cannot recollect every minute circumstance connected with a management which I have carried on now 20 or 30 years. I was not bound by my commission to keep any accounts, or make any catalogues, or indeed make any arrangements whatever—my commission from the King simply commanding me to preserve the collection. No duty was imposed upon me, and where no duty was imposed upon me by the Crown I was not bound to undertake any. I was merely ordered to preserve the collections, and keep them, as before, under lock and key. My predecessors used to allow no one to go there but the members of the University, and that rarely.

University of Edinburgh.

Professor Jameson.

6 February 1836.

Does your commission bear that no one should come there?—My commission, I think, merely says that I shall preserve the collection. Dr. Walker and Dr. Ramsay, the two other Professors of Natural History before me, kept the key in their pockets. Dr. Walker used to say, that he would not open it to any one. His commission from the King, he said, did not command him to open it to any one, nor to the public.

And do you conceive that your commission entitles you to allow individuals to deposit private property in the Museum?—I cannot say how this may be. I should think, if this privilege is allowable, it should only be granted to the Regius Keeper and Professor of Natural History.

You are to preserve or conserve the articles there deposited?—Yes; a copy of the charter was laid before the Commissioners, when they examined it.

Dr. Walker got a charter, and Dr. Ramsay the same?—Yes.

When you say that the Collection of Dufresne belongs to the Professors, is it personally or individually, or to the Professors as Professors?—As Professors. The Collection belongs to those Professors who signed the bond. All the Professors did not sign the bond; therefore all the members of the College are not liable.

Are you aware that the Bank undertook to advance the money, upon the condition of the renewal of the bond and bills, the principal to be paid out of General Reid's fund, without having claim against the Professors individually for repayment?—I think these were the terms.

Then, if they should be paid out of General Reid's fund, do you still consider the Collection the property of the Professors?—That money is alleged to be the property of the Professors.

Well then, do you think that the Professors could at this moment withdraw that Collection from the Museum?—Those that have put their name to this paper may withdraw it.

And should they propose such a thing, do you think yourself entitled to comply with it as Keeper of the Museum?—As far as I understand the nature of the property, and the terms on which it was placed in the College, I rather am disposed to think that, as Keeper of the Museum, before parting with it, advice would be required; although, as Professor, I could not well see how it could be retained.

Do you suppose that the University has no claim over it, in consequence of interest having been paid on the sum now for nine years, wholly out of public funds, or the fees collected from the public, under authority supposed to be competent to authorize the exaction of such fees?—I really cannot say.

The object of the question is to ascertain the understanding and opinion of the Professors, who consider that they have a personal right in those articles, yourself being one of the three?—It is a difficult legal point; I cannot venture on an answer.

But we understand that it is your opinion that this property is quite distinct from the property of the Museum —Yes, that is the opinion of the Professors who signed the bond.

And, of course, if they withdraw the Collection, they will feel themselves bound to pay the interest that has hitherto been paid?—I cannot well say; it is again a nice point. It may be said, on the part of the Professors, "The public and the University have profited by this exhi-"bition: therefore, we Professors are entitled, if we choose, to withdraw the Collection with-"out the penalty of paying the nine years' interest—that interest being the price paid by the "public and the University for the amusement and instruction derived from the study and "examination of this Museum."

That Collection is kept quite distinct and separate from the other articles in the Museum?—Yes.

Did a Natural History Society formerly hold their meetings within the walls of the College?—Yes; within the walls of the Museum.

When was the Society dissolved?—Probably eight or ten years ago.

Did they possess a collection of Books or Manuscripts?—They had a collection of both, but a strange set got in amongst them; and one set ran away with the books, and another set ran away with the manuscripts, and the whole property disappeared.

Are we to understand from you that, with the exception of that part of the contents of the Museum which you consider as your private property, and which is chiefly in cases and under the qualification of that part of the contents of the Museum which you was speaking of, every person, *quoad* the rest, has regular access to it on payment of the regular fees?—Yes.

And you as Keeper have no right to restrain them from inspection?—No.

And that access is denied to those parts of the collection that are in cases, merely from the want of proper accommodation?—Yes.

Are any of the articles (I think some in the rooms over the gateway) in additional rooms exhibited in cases?—Yes, they are, in order to preserve them.

Is any person admitted to these rooms?—The Students are admitted twice a-year.

But not the public?—I have sometimes individuals there who assist me in drawing and making preparations, and writing out lists, &c.

Suppose you had an Assistant properly qualified, with an adequate remuneration for his trouble, would there be any risk in giving Visitors access to any part of it?—At present such accommodation could not be granted, owing to the want of room. The rooms over the gateway, just mentioned, could not be opened to strangers, as not only the cases are filled, but the floors are covered with cases and specimens of various descriptions. It is said that many of these packages might be removed to cellars (by the bye, we have no such accommodation as cellars), and thus the rooms will be cleared for strangers. This remark is founded on ignorance of the nature of the articles. Only the other day I ordered some boxes, which I had caused to be nailed up, to be re-opened, and found the labels of the different articles, on which their value very much depended, gnawed away by the mice; so that thus a valuable

679

University of Edinburgh.

Professor Jameson.

6 February 1830.

Collection sent down by Lord Melville, from one of the late expeditions, suffered considerably. In short, in a Museum no perishable article can be placed out of sight.

Then are we to understand that one great desideratum is the want of additional accommodation and room?—Yes.

Do you think the 2*s.* 6*d.* a proper sum to be demanded at the door, or is it desirable to reduce that sum?—Before proposing that sum, I corresponded with all the Museum-keepers of character in this country, particularly the late Mr. Bullock, who ranked highest in that department, and he gave it as his opinion, in which he was supported by other people of the same profession, that, taking into consideration the whole circumstances of the case, 2*s.* 6*d.* was the sum which would yield the largest and longest-continued income.

You still entertain that opinion?—Yes. The Museum income is not from Edinburgh, as all the curious in Edinburgh have been already gratified, but from strangers, who would as readily give 5*s.* as 2*s.* 6*d.* for admission to the Museum. I was told, some years ago, that many would come to the door and march off again, on hearing the admission fee was 2*s.* 6*d.* To ascertain the truth of this opinion, I instructed the porter to keep a list of all those who refused to pay the 2*s.* 6*d.* The list was continued for several years—three or four years. The result was that, during that long period, not more than from fifteen to twenty refused to pay the 2*s.* 6*d.*

Are you aware that the fee of admission to the Hunterian Museum is only 1*s.*?—Yes. I may mention, that, to meet the necessary expenses of the Museum of the University of Edinburgh, not less than £1000 a-year is necessary.

Additional?—No, £1000 sterling of income. Those who are not acquainted with the details of a Museum, may think this a large sum of money, but it is not more than necessary for the purposes of the Museum.

Will you have the goodness to send to the Commissioners the returns after the first half-year of 1826, and the receipts from the admissions?—Yes.

Do you think it would be an objectionable thing to allow Medical Students access to the Museum, on paying 5*s.* of a matriculation fee?—I think it would be objectionable. I think it would do no good. It would fill the rooms with a number of idle mischievous boys; and at present it could not be done; we have not servants to watch them. If that arrangement is adopted at a future time, it will require a servant to each room. At present, the whole Museum establishment has only an old woman for cleaning and dusting, and a man as door-keeper and stove-keeper. And, suppose the Students were admitted to the rooms, it would require three additional servants at 18*s.* per week.

Are we to understand from you that there are within the walls of the College, about that part of it where the Museum is established, apartments that might be fitted up for your accommodation?—No apartments that I know of. Every space is already completely occupied. There was a plan before the Commissioners of the College Buildings for purchasing ground toward the westward; for there is no unoccupied space within the grounds of the College.

601

APPENDIX.

RETURNS

Ordered to be made to the Royal Commissioners by all the Universities and Colleges of Scotland.

University of Edinburgh.

Appendix. Returns ordered.

1. Copies of all the Charters of Erection or Foundation of the College of , whether granted by the Crown or by Bishops, by Corporations or by private Individuals.

2. Copies of all the Rules and Regulations or Acts of Visitation of the College of ; whether made and prescribed by the Crown, or any Visitors or Commissioners appointed by the Crown or Parliament, or by the General Assembly of the Church of Scotland, or any Commissioners appointed thereby, or by any Bishops or Corporations, or by any Body or Individuals claiming Authority to make and prescribe the same.

3. Copies of all Regulations enacted by the Senatus Academicus of the College of or any Office-bearer belonging thereto, by which the discipline, government, and course of teaching in the said College are in any way directed or prescribed.

4. A Return of the manner in which the Senatus Academicus, in the College of , is composed, and the constituent Members thereof.

5. A Return of the Office-bearers in the College of : *e. g.* Chancellor, Rector, &c., and of the Persons or Electors by whom such Office-bearers are nominated or elected, and of the Manner in which such Nomination or Election is made.

6. A Return of the Manner in which the Professors are appointed; in what hands the power of Inquiry and Correction, Suspension or Deprivation is vested, or by whom it is claimed.

7. A Return of the Salaries of the Principal and Professors; specifying the amount of each, and the funds whence derived; by what authority the amount is fixed; and, if by the Senatus Academicus, whether under any, and what control.

8. A Return of all the Fees payable, either by Students on attending classes, or by Candidates for Graduation, at their examination or on receiving Degrees; whether to Professors or to the Libraries, or to any of the Institutions or Funds of the College; of the Authority by which the same are fixed; and whether under any, and what control.

8*. A Statement of the whole Expense which must be incurred by every Student in the College of , passing through the Course of Study preparatory to the Degree of Master of Arts, including Class-fees, price of Books, Library-money, Dues of Graduation, and all other necessary Charges. Ordered 27th October 1827.

9. A full and specific Return of the whole Rentals, Funds, Revenues, and Estate of the College of during the last 50 years; distinguishing the several sources from which the same may be drawn, as well as all occasional payments during the same period.

10. A full and specific Return of the whole Expenditure of the College of ; specifying in detail the mode in which their Revenue is employed, and the purposes and objects to which the annual Revenue or occasional Receipts have been, for the last 50 years, and are applied; and all the Persons or Office-bearers receiving regular or occasional salaries, payments, gratuities, or fees therefrom;—specifying, separately, the amount of the public burdens, taxations, or deductions, of whatever sort, borne by the revenues of the said College.

11. A Statement by whom are the estates of the College of managed, and their funds and revenues administered; and the application and expenditure thereof regulated; and if, whether under any, and what control.

12. A Return of the number of Bursaries at each College, by whom founded, and in whom is the right of presentation; of the funds attached to the same, and the annual allowance to each Bursar; and what certificates are required from Bursars previous to admission.

13. What is the commencement and duration of the Session at the College of ; by what authority has the same been fixed; and, if any alterations have taken place therein, when did the same take place?

14. A Return of the number of the different Faculties established in the College of ; and by what authority, and when instituted.

15. A Return of the number of Professorships, and of classes in the College of ; specifying the date of the institution of each, the Faculty to which each class belongs, the subjects of the course of study, and whether the classes are carried on for more than one Session, and for how many.

16. A Return of the Professorships in the College of , under which no duty is performed, and no Lectures delivered; of the salary or emoluments, if any, attached thereto; and the period when the duty of the class was discontinued.

17. Is there any, and what general course of study, or order, for the attendance of classes, prescribed for Students entering at the College of ?

18. A Return of the hours of teaching of each Professor in the College of ; of the manner in which his class is taught, whether by lectures or by examinations; and, if partly by both, whether the examinations take place during the same or extra hours.

19. Are any of the examinations of the Students in the different classes public examinations? Do

University of Edinburgh.

Appendix. Returns ordered.

any such examinations take place before all the Professors, or the Principal, or before the whole University?

20. Is there any public general examination of the Students at the commencement of each Session of the classes of Greek, Latin, Philosophy, and of the Theological classes in the College of ? and if so, are such examinations had in the presence of the Principal, and all the Professors?

21. Is any examination required by the Charters, Rules, Statutes, or Laws of the College of of the Candidates for Bursaries, or any of them at the said College? Who are appointed Examiners? and, if any such examination is prescribed, is it in practice observed?

22. Have any classes been transferred from one Faculty to another, and the objects and subjectof the course of study of any of the classes changed? and if so, by what authority?

23. At what period was each Professor limited to one particular department? and when was the practice of each Professor or Regent carrying forward one class for the whole period of the course of study, through all the sciences, discontinued?

24. Are there any prizes in the different classes of the College, or any prizes open to competition to all the Students at the University? and by whom are the subjects prescribed? and by whom, and in what manner are such prizes awarded and conferred?

25. Have the Students any voice in the appropriation of the prizes? and if so, on what authority is that regulation founded?

26. Have any funds been mortified or otherwise appropriated for prizes, and in what manner are the same managed and distributed?

27. Are any Students admitted to attendance at any of the classes in the College of , without paying fees? and if so, is such exemption matter of right, or of indulgence by the Professors individually?

28. Is there any regulation requiring the Professors, as a body, or with their respective classes, to attend Divine Service on Sunday, in any Church or Chapel connected with the College, or in any particular place of worship, and is the same in observance; or, if not, how long has it been in non-observance? And is there any accommodation appropriated for the use of the Students generally, or of any particular Students in any particular place of worship; and is there any regulation applicable to Students not of the Established Church?

29. A Return of the number of Students matriculated at the College of , for the last 50 years; specifying the numbers for each year, and of the numbers entered for the different Faculties respectively.

30. A Return of the proportion of Medical Students at the College of during the same period; distinguishing the number from the different parts of the United Kingdom and those from Foreign countries.

31. A Return of the number of Students at each class during each Session during the same period.

31*. A Return of the number of Students at the Divinity-Halls of the different Colleges of Scotland, for the last twenty-five years; distinguishing the number of those who attended regularly from those whose attendance was irregular.

32. In what Faculties are degrees conferred? and by whom are the same conferred?

33. What are the qualifications required of candidates for degrees in regard to attendance, and course of study or curriculum, at the College of ? And at what period and by what authority were the same fixed?

34. By whom are candidates for degrees examined, and what is the form and course of examination? Are any of the examinations for degrees public, and do the same take place in presence of the whole University? And if examinations in public have been discontinued, at what period were they so discontinued?

35. Are any degrees conferred by the University of without the examination or attendance of the persons on whom such degrees are conferred? Is this the case, or has it been the case within the last 50 years, in regard to graduation in the Faculty of Medicine; and, if there has been any alteration in this respect, when did the same take place?

36. Are any of the degrees conferred by the University of honorary degrees? and if so, in what Faculties?

37. A Return of all the persons who have graduated at the College of , during the last 50 years; distinguishing the number obtaining degrees in the different Faculties, and, in the Faculty of Medicine, specifying the number (if any) who have obtained medical degrees, during the same period, who had not attended any classes in the University or were not personally examined at the time of graduation; the number who had carried on part of their medical education at other Universities; and also the number of medical graduates from the different parts of the United Kingdom, and those from Foreign countries.

38. What offices or situations, exclusive of Church livings, are in the gift or appointment of the Senatus Academicus, or of the Principal, or any particular Professors *ex officio?* And what are the duties, perquisites, and emoluments of the same?

39. Have the members of the Senatus Academicus any, and what power, privileges, or immunities in the towns, in which the College is situated, either in regard to burghal taxations or burdens, or as to exemption from the jurisdiction of the ordinary Magistrates within the same?

40. Have the Professors individually, or the Senatus Academicus collectively, or any of the Office-bearers, in the College, any jurisdiction as Magistrates, within the City, in which the College is situated, either over the inhabitants thereof generally, or over the Students of the said College?

41. In what manner are disorders, or delinquencies, or breaches of the peace, or improper conduct, on the part of the Students, brought before the Senatus Academicus? and by whom, and in what manner, are the same punished?

42. In whom is the power of expulsion of Students vested? and by whom is it exercised, and on what authority is such power or claim founded?

43. Are Students, who have been expelled from other Colleges, excluded by any regulation from admission, matriculation, or graduation, at the College of ? and if so, by what authority, was such regulation introduced?

44. Are Students, on entering at the College of , if they have previously studied at any other, required to produce any certificates of good conduct from such other College?

45. Are Graduates of other Universities admitted *ad eundem* at the College of ?

46. What are the qualifications necessary for the office of Principal of the College of May a Layman hold the office?

683

47. Does the Principal of the College of visit and examine the Students of any of the classes? and how often do such visitations take place?

48. Does the Principal of the College of teach any class, or give any course of Lectures? and, if such duty has ever been performed, when, and by what authority was it discontinued?

49. Does the Chancellor, or Vice-Chancellor, Rector, or Dean of Faculty of the University, exercise any and what authority or jurisdiction over the Principal, Professors, or Students thereof? and from what source is such authority or jurisdiction derived?

50. Are there any controversies, pleas, or disputes, now subsisting in the University of , in regard to the jurisdiction, powers, privileges of the Chancellor, Vice-Chancellor, Rector, Dean of Faculty, Principal, Professors, or any Office-bearers in the said University? and if so, upon what points connected therewith, and between what parties have such controversies, pleas, or disputes arisen?

51. Are there any controversies, pleas, or disputes, now subsisting in the University of in regard to the members composing the Senatus Academicus, or the several Faculties, or Professions, belonging to the Senatus Academicus, or as to the rights, and privileges, and powers of the Senatus Academicus over individual Professors, or, as to the classes belonging to the different Faculties? and if so, upon what points connected therewith, and between what parties, have such controversies, pleas, or disputes arisen?

52. Are there any controversies, pleas, or disputes now subsisting in the University of as to the rules for granting degrees, or as to the curriculum or course of study necessary for Students graduating, at the said University? and if so, upon what points connected therewith, and between what parties have such controversies, pleas, or disputes arisen?

53. Is there any Authority or corporate Body, Office-bearer, or any set of individuals, who have any right of instituting new Faculties or Professorships in the College of ? and if so, what are the rights and Academical privileges and immunities belonging to the same so instituted?

54. Are the Professors of such new classes admitted Members of the Senatus Academicus, or of the Faculties in the College, with the subjects and department of which such classes are connected?

55. Do the Students, or any of them, live within the buildings or the precincts of the College of , or in any manner under the inspection and observation of the Professors?

56. Is there any Academical dress prescribed in the College of ?

57. Were any buildings in the College of , at any time appropriated for the residence of students, and any funds destined or employed in the repair and maintenance thereof? and, if such buildings are not so occupied, when did such change take place,—under what authority,—and how are the funds now employed which were destined or formerly employed in the repair or maintenance of such buildings?

58. Do any of the Professors of the College of reside in any houses, or buildings, within the precincts of the said College, and by what authority were the buildings so occupied and appropriated? from what funds are the same repaired and maintained? by what authority were such funds appropriated to that object, and by whom is the expenditure of the same regulated and applied?

59. Were any funds, at any time, and by what authority, mortified, or in practice employed in the maintenance, repair, and improvement of the fabric and buildings of the College of ?

60. Are such funds so employed at the present time, and by what authority, and by whom is the expenditure of the same authorized, regulated, and applied; and, if not so employed, to what purposes, and by what authority, have such funds been diverted?

61. Is there any Museum, or are there any instruments, or apparatus for philosophical experiments, or collections of specimens, or of preparations belonging to the College of , or any of the classes thereof? from what fund have the same been purchased and kept in repair, and under whose management are the same and the said funds?

62. Is there any Astronomical Observatory belonging to the College of , and any fund applied or destined to the maintenance of the same? and by whom is such fund managed and applied?

63. When was the Library of the College of instituted; by what fund is it maintained; by whom is the application of those funds superintended; and what are the rules and regulations for the custody and management of the Library, and under which it is open to the Professors, students, or the public?

63*. A Return of all Books entered in the Receipt-book of the Libraries of the Universities of Scotland, prior to the date of this order, as borrowed out by the Professors respectively specifying the titles of the books, and the number of volumes of the same, the year when such borrowing took place, the name of the borrower, and distinguishing such as may appear in the receipt-books to have been borrowed by any Professor for the use of other persons, together with a list of the books which may have been returned to the Library by the Professors respectively, at the date of the Return thus ordered. Ordered 11th—17th October 1827.

63**. A Return of the number of Students who have availed themselves of the use of the Libraries of the Universities of Scotland during session 1826–7, with the number of Volumes taken out by each during that period. Ordered 9th—27th October 1827.

63***. Return of the total number of Books at present amissing from the Libraries of the Universities of Scotland; distinguishing the number amissing as at the 1st of January 1826. Ordered 1827.

64. Are any meetings of Graduates held at the University of , and on what occasions, and for what purposes; or do any of the University meetings include the Graduates, and what are their privileges?

65. Is a Representative annually returned from the University of to the General Assembly of the Church of Scotland, and of whom is the meeting, in which such Representative is chosen, composed?

66. Are there any complaints, applications, or petitions now before the Principal and Professors, or other authority of the University of , from the Students, or any of them, praying for the alteration of any Academical rules and regulations, or complaining of any alleged grievances at the said College? and if so, transmit copies of the same, and state the procedure thereon.

67. Are the Principal, Professors, Masters, and others bearing office in the College of before their admission to the exercise of their respective functions, required to acknowledge, profess, and subscribe the Confession of Faith, and Formula of the Church of Scotland, as approved and fixed by Act of Parliament, and to swear and subscribe the oath of allegiance to His Majesty? and on what occasion, and before whom, is such acknowledgment and subscription made, and such oath taken?

University of Edinburgh.

Appendix. Returns ordered.

68. Is there any common table kept in the College of for any Professors, Fellows, Bursars, Poor Scholars, or Students? if so, from what fund is the expense thereof paid, and by whom is such expense regulated and allowed; and are any of the Professors required to preside at the same, and is such duty performed?

69. Are any private buildings erected, and on what authority or title, within the precincts, belonging to the College of ?

70. Is it the practice in the College of to appoint, during the lifetime of a Professor, an Assistant and Successor to such Professor? How many such appointments have occurred during the last 100 years? And in these cases specify the names of the Incumbents, and of the persons appointed Assistants and Successors, and of the parties or body by whom such appointments have been made; and state what allowance and salaries have been given to such Assistants and Successors.

71. Are the qualifications required by the Charters, Statutes, or Laws of the College of , as a condition of the nomination of Professors, invariably observed in practice?

72. Has any person been appointed Professor in the College of under 21 years of age?

73. Are any lands, or other estate, and revenues attached to any Professorship in the College of ? Is there any house attached to the office of Principal, or any Professorship; and is the same inspected, and its state of repair examined, from time to time? or, if any lands or house were formerly granted and mortified for the use of the Principal or any Professor, when and for what purposes, and by what authority or transaction have the same been diverted?

74. Are the provisions of the Charters, Statutes, or Acts of Visitation, with respect to the residence and attendance of the Professors, duly observed? and in what manner is leave of absence granted, or in what manner, and by what authority, is non-attendance noticed and corrected?

75. Are there any rights of patronage of parish churches, or other church endowment vested in, and attached to, the University or College of ? and by whom, and in what manner, are such rights of patronage exercised?

ALPHABETICAL INDEX

To the subjects of Returns ordered to be made by all the Universities and Colleges of Scotland, having the numbers of the requisitions severally placed opposite.

	No. of Order.
Academical Dress	56
Apparatus	61
Assistants and Successors	70
Buildings. (See College Buildings.)	
Bursaries, and Mortifications for	12

APPENDIX.

ORDERS AND RETURNS.

Order I.—Copies of all the Charters of Erection or Foundation of the College of Edinburgh, whether granted by the Crown or by Bishops, by Corporations or by private Individuals.

Return by the Senatus Academicus.

University of Edinburgh.

Appendix. Order I.

The Senatus applied to the Honourable Patrons for the information here required, and a return has been sent by the Honourable Patrons to the Royal Commission, to which returns we are authorized by the Patrons to refer, viz.—

Charter, 14th April, 1582.
Charter, 4th April, 1584.
Charter, 7th August, 1612.
Act of Ratification, 4th August, 16.

Return by the Town Council.

In compliance with the above Requisition, the Lord Provost begs to transmit herewith the following Papers:—

1. Copy of Charter by King James the 6th, dated 14th April, 1582.
2. Copy Charter by King James the 6th, dated 4th April, 1584.
3. Copy Charter by King James the 6th, dated 7th August, 1612.
4. Copy Ratification in Parliament of diverse Infeftments and Grants to the Town of Edinburgh, for Sustentation of the College Ministers and Hospitals, dated 4th August, 1621.

(1.)—Copy Charter of Erection and Confirmation, by King James the Sixth, of the College of Edinburgh.—14th April, 1582.

14 April, 1582.

Jacobus, Dei Gratia, Rex Scotorum, omnibus probis hominibus totius terræ suæ, clericis et laicis, salutem: Sciatis, nos, cum avisamento Dominorum nostri Secreti Concilii, quandam chartam et infeofamentum per nostram charissimam matrem, pro tempore, regni nostri reginam, post suam perfectam ætatem, cum avisamento et consensu dominorum ejus secreti concilii, factum, datum, et concessum dilectis nostris, præposito, ballivis, consulibus, et communitati burgi nostri de Edinburgh, et eorum successoribus, super donatione, dispositione, et confirmatione omnium et singularum terrarum, tenementorum, domorum, ædificiorum, ecclesiarum, capellaniarum, hortorum, pomœriorum, croftarum, annuorum reddituum, fructuum, devoriarum, proficuorum, emolumentorum, firmarum, eleemosinarum, lie Daill sylver, obituum, et anniversariorum quorumcunque, quæ quovis modo pertinuerunt, aut pertinere dinoscuntur, ad quascunque capellanias, altaragia, præbendas, in quacunque ecclesiâ, capellâ aut collegio, infra libertatem dicti nostri burgi de Edinburgh, fundatâ seu fundandâ, per quemcunque patronum, in quarum possessione capellani et præbendarii earundem per prius fuerant, ubicunque præfatæ domus, tenementa, ædificia, pomaria, horti, annui redditus, anniversaria, fructus, proventus et emolumenta jacent, aut prius levata fuerunt respectivè, cum maneriebus, locis, hortis, pomariis, terris, annuis redditibus, emolumentis, et devoriis quibuscunque, quæ fratribus Dominicalibus seu prædicatoribus, et minoribus seu Franciscanis, dicti burgi nostri de Edinburgh perprius pertinuerunt; unà cum omnibus et singulis terris, domibus, tenementis, et hortis, jacentibus infra dictum nostrum burgum et libertatem ejusdem, cum omnibus annuis redditibus, de quacunque domo, terris aut tenemento, infra dictum nostrum burgum, levandis, quibuscunque capellaniis, altaragiis, ecclesiis, mortuariis aut anniversariis, ubicunque sunt infra regnum nostrum Scotiæ, donatis, dotatis et fundatis: ac etiam cum omnibus et singulis annuis redditibus et aliis devoriis solitis, aut quæ per quamcunque ecclesiam extra dictum nostrum burgum, a præposito aut ballivis ejusdem, de communi redditu ejusdem, pro suffragiis celebrandis, demandari poterant, cum pertinentiis: ac de omnibus aliis privilegiis, libertatibus, et facultatibus in chartâ et infeofamento, donatione et dispositione prædictis desuper confectis, ad longum specificatis et contentis, tenendis de dictâ charissimâ nostrâ matre et successoribus suis, de mandato nostro visam, lectam, inspectam et diligenter examinatam, sanam, integram, non rasam, non cancellatam, nec in aliquâ sui parte suspectam, ad plenum intellexisse sub hac forma: "Maria, Dei Gratiâ, Regina Scotorum, omnibus probis hominibus totius terræ suæ, clericis et laicis, salutem: Sciatis, quia nos impensius munus nostrum erga divinum servitium perpendentes, et pro ardenti zelo quem ob intertenendam politiam et æquabilem ordinem inter subditos nostros, præcipuè vero infra burgum nostrum de Edinburgh, præservandum habemus: Considerantes itaque nos ex officio teneri munus erga Dei complecti debere, cujus providentiâ regimini hujus regni proponimus, sicque nobis ex officio incumbere omni honesto modo pro ministris verbi Dei providere, et quo hospitalia pauperibus, mutilatis et miseris personis, orphanis, et parentibus destitutis infantibus, infra dictum nostrum burgum præserventur: Post nostram perfectam ætatem, cum avisamento dominorum Secreti Concilii nostri, Dedimus, concessimus, disposuimus, ac pro nobis et successoribus nostris pro perpetuo confirmavimus, necnon tenore præsentium damus, concedimus, disponimus, et pro nobis et successoribus nostris pro perpetuo confirmamus, prædilectis nostris præposito, ballivis, consulibus, et communitati dicti nostri burgi de Edinburgh, et ipsorum successoribus

University of Edinburgh.

Appendix. Order I.

14 April, 1582.

in perpetuum, omnes et singulas terras, tenementa, domos, ædificia, ecclesias, capellas, hortos, pomaria, croftas, annuos redditus, fructus, devoria, proficua, emolumenta, firmas, eleemosinas, lie Daill silver, obitus et anniversaria quæcunque, quæ quovismodo pertinuerunt, aut pertinere dinoscuntur, ad quascunque capellanias, altaragia, præbendarias, in quacunque ecclesiâ, capellâ aut collegio, infra libertatem dicti nostri burgi de Edinburgh, fundata seu fundatas per quemcunque patronum, in quarum possessione capellani aut præbendarii earundem perprius fuerant, ubicunque præfatæ domus, tenementa, ædificia, pomaria, horti, annui redditus, anniversaria, fructus, proventus, et emolumenta jacent, aut prius levata fuerant respectivè; cum maneriis, locis, pomariis, terris, annuis redditibus, emolumentis et devoriis quibuscunque, quæ fratribus Dominicalibus seu prædicatoribus, et minoribus seu Franciscanis, dicti nostri burgi de Edinburgh, perprius pertinuerunt; unà cum omnibus et singulis terris, domibus, tenementisque, jacentibus infra dictum nostrum burgum et libertatem ejusdem; cum omnibus annuis redditibus, de quacunque domo, terris, aut tenemento infra dictum nostrum burgum levandis, datis, fundatis, et donatis, quibuscunque capellaniis, altaragiis, ecclesiis, mortuariis, aut anniversariis, ubicunque sunt infra regnum nostrum: Ac etiam cum omnibus et singulis annuis redditibus, et aliis devoriis solitis, aut quæ per quamcunque ecclesiam extra dictum nostrum burgum, præposito aut ballivis ejusdem, de communi redditu ejusdem, pro suffragiis celebrandis demandari poterint, cum pertinentiis: Tenendas et habendas omnes et singulas præfatas terras, tenementa, domos, ædificia, pomaria, hortos, croftas, annuos redditus, fructus, devoria, proficua, emolumenta, firmas, eleemosinas, obitus, anniversaria, ecclesias, capellas, fratrum loca, hortos, cum pertinentiis, præfatis præposito, ballivis, consulibus et communitati et eorum successoribus, de nobis et successoribus nostris, in perpetuum, prout eadem jacent in longitudine et latitudine, in domis, ædificiis, muris, mureniis, lignis, lapide et calce, cum libero introitu et exitu, &c. ac cum omnibus aliis et singulis libertatibus, commoditatibus, proficuis et asiamentis, ac justis suis pertinentiis quibuscunque, tam non nominatis quam nominatis, tam sub terrâ quam super terram, ad prædictas terras, tenementa, domos, ædificia, pomaria, hortos, croftas, annuos redditus, fructus, devoria et alia præscripta, cum pertinentiis, spectantibus, seu justè spectare valentibus, quomodolibet in futurum, liberè, quietè, plenariè, integrè, honorificè, benè et in pace, absque revocatione aut contradictione quacunque; Cum potestate memoratis præposito, ballivis, consulibus et communitati, et ipsorum successoribus, per seipsos et ipsorum collectores quos constituent, præfatos annuos redditus, fructus, devoria, proficua, emolumenta quæcunque, levandi et recipiendi, ubicunque perprius levata fuerunt, præfatas terras et tenementa locandi et removendi, loca diruta extruendi et reparandi, eademque in hospitalia aut alios similes usus legitimos, prout ipsis, cum avisamento ministrorum et seniorum dicti nostri burgi, videbitur, reducendi et applicandi, adeo liberè in omnibus, sicuti præfati prebendarii, capellani et fratres præscripti eisdem perprius gaudere, easdemque possidere potuissent: Memorati autem præpositus, ballivi, consules, et eorum successores, tenebuntur et astricti erunt ministros, lectores, et alia ecclesiastica onera, præfatis annuis redditibus, proficuis et devoriis, secundùm valorem et quantitatem earundem, sustinere, locaque et ædificia reparanda in hospitalitatem, et alios usus præscriptos, applicare: Considerantes itaque quantâ fraude ingens numerus dictorum præbendariorum, capellanorum et fratrum præscriptorum, qui post alterationem religionis, terras, annuos redditus et emolumenta ipsorum, capellanis, prædendis et aliis locis respectivè perprius mortificata, disposuerunt, alienarunt, et in manibus quorundum particularium virorum extradonarunt, ac etiam quod plerique legii nostri quarundam terrarum, tenementorum et annuorum reddituum, per ipsorum prædecessores mortificatorum, jus sibi acclamarunt, per brevia capellæ nostræ, aut aliàs, sasinam, tanquam hæredes suorum prædecessorum (qui easdem ecclesiæ perprius dotarunt) recuperarunt; quod evenit, partim negligentiâ officiariorum dicti nostri burgi, et partim collusione dictorum præbendariorum, capellanorum et fratrum præscriptorum: Quocirca, cum avisamento præscripto, omnes et singulas hujusmodi alienationes, dispositiones et sasinas, quibus primum propositum et animi fundatorum infringitur, alteratur et variatur, diducendo easdem in particulares usus, ad effectum quod eædem in usus suprascriptos converti poterint, per præsentes rescindimus et annullamus, quamquidem hanc nostram declarationem volumus tanti esse roboris et efficaciæ, ac si personæ quæ easdem dispositiones obtinuerunt, particulariter citatæ essent, ipsarumque infeofamenta absque ulteriori processu rescinderentur: Ac etiam, cum avisamento præscripto, unimus et incorporamus omnes et singulas terras, tenementa, domos, ædificia, ecclesias, cœmeteria, capellas, pomaria, hortos, croftas, annuus redditus, fructus, devoria, proficua, emolumenta, firmas, eleemosinas, obitus, anniversaria, fratrum loca, hortos eorundem, cum suis pertinentiis, in unum corpus, in posterum appellandum, Fundatio nostra ministerii et hospitalitatis de Edinburgh: Volumus etiam quod unica Sasina per præfatos præpositum et ballivos, aut ipsorum aliquem, dicti ministerii et hospitalitatis nomine, apud prætorium dicti nostri burgi semel accepta, tam sufficiens erit Sasina perpetuò in futurum, ac si eadem super particulares terras, ad dictos capellanos, præbendarios, fratres pertinentes, aut ipsis in præfatos annuos redditus, anniversaria, firmas, proficua, et devoria præscripta debitas sumeretur, non obstante locorum distantiâ: Præterea, per præsentes nolumus capellanos, præbendarios, et fratres (qui ante dictam alterationem provisi erant) per hoc præsens nostrum infeofamentum præjudicari, sed reservamus illis usum dictorum fructuum et devoriarum, durante eorum vitâ tantum; Præcipiendo itaque nostrorum computorum rotulatoribus, præsentibus et futuris, ipsorum collectoribus, factoribus et aliis quorum interest, in genere nec non in specie, quod nequis eorum recipere aut levare præsumat dictos fructus, particulariter suprascriptos, pro quovis tempore præterito, seu futuro, neve impediant aut impedimentum ullum faciant memoratis præposito, ballivis, consulibus, communitati et ipsorum successoribus in pacificâ possessione earundem: Requirendo et ordinando etiam dominos sessionis nostræ, quatenus literas in omnibus quatuor formis, ad instantiam dictorum præpositi, ballivorum, consulum, communitatis et ipsorum successorum, ad effectum suprascriptum dirigant: Nec non præcipiendo quibuscunque intromissoribus cum dictis fructibus, quatenus ipsis de eisdem promptè intendant, pareant, et gratam solutionem facient. In cujus rei testimonium huic præsenti Cartæ nostræ magnum sigillum nostrum apponi præcipimus; Testibus, Reverendissimo in Christo Patre Joanne, Archiepiscopo Sancti Andreæ, et dilectis nostris consanguineis, Georgio, Comite de Huntlie, Domino Gordon et Badyenoch, cancellario nostro, Jacobo, Comite de Bothuill, domino Hailles, Creichtoun, et Liddisdaill, regni nostri magno Admirallo; dilectis nostris familiaribus consiliariis, Richardo Maitland de Lethingtoun, nostri secreti sigilli custode, Jacobo Balfoure de Pettindreich, nostrorum rotulorum registri ac concilii clerico, et Joanne Bellenden de Auchnoule, nostræ Justiciariæ Clerico, equitibus auratis: Apud Edinburgum, decimo tertio die mensis Martii, anno Domini millesimo quingentesimo sexagesimo sexto, et regni nostri vicesimo quinto." Quamquidem Cartam et infeofamentum in omnibus suis punctis et articulis, conditionibus et modis, ac circumstantiis suis quibuscunque, in omnibus et per omnia, formâ pariter et effectu, ut præmissum est, approbamus, ratificamus, ac pro nobis et successoribus nostris pro perpetuo confirmamus: Insuper nos, cum avisamento prædicto, pro diversis rationabilibus causis bonis et con-

siderationibus nos moventibus, de novo, tenore præsentium, damus, concedimus et disponimus præfatis præposito, ballivis, consulibus et communitati dicti burgi nostri de Edinburgh, et eorum successoribus, omnes et singulas prænominatas terras, tenementa, domus, ædificia, annuos redditus, capellas, loca, hortos, pomaria, croftas, census, firmas, proficua, emolumenta et alia, respectivè et particulariter superiùs specificata, per ipsos in perpetuum applicanda in sustentationem ministerii, pauperum auxilium, reparationem scholarum, propagationem literarum et scientiarum, pro eorum et successorum suorum arbitrio, uti eis magis utile videbitur: Quibus etiam, pro nobis et successoribus nostris, plenariam ac liberam committimus potestatem, quoscunque alios annuos redditus, annua proficua quæcunque, tam extra quam intra dictum nostrum burgum, quæ in posterum per quoscunque, bono zelo ac libertate suâ motos, ad alimentum ministrorum evangelii, auxilium pauperum, ac sustentationem gymnasiorum pro instaurandis scientiis et doctrinâ, donari et dotari contigerint, acceptandi; quas etiam terras, annuos redditus et proficua, supra scripta, per prius donata et fundata, ac in posterum donanda et fundanda, ut præmissum est, nos, pro nobis et successoribus nostris, nunc prout extunc, et tunc prout exnunc, confirmamus, ratificamus, et admortizamus, ac easdem adeo liberè mortificamus, sicuti aliquæ terræ, redditus, tenementa et possessiones ecclesiæ ullo tempore præcedenti mortificatæ fuerunt: Præterea nos, pro nobis et successoribus nostris, ratificamus, approbamus et confirmamus renunciationem et dimissionem, per familiarem, servitorem nostrum, Joannem Gib, factam, de omnibus jure ac titulo, quæ ipse virtute nostræ donationis prætendere potuit ad præpositurum ecclesiæ beatæ Mariæ de Campis (vulgo lie Kirk of Field) cum fructibus, terris, possessionibus, redditibus et devoriis ejusdem, præteritis, præsentibus et futuris, in favorem dictorum præpositi, ballivorum, consulum et communitatis, pro seipsis et eorum successoribus, ac nomine et ex parte ministerii et pauperum: Ac quia intra privilegia et libertatem dicti nostri burgi nunc diversa extant vasta et spatiosa loca, quæ præposito, prædendariis, sacerdotibus, et fratribus tempore præterito pertinuerunt, maxime apta et commoda pro constructione domorum et ædificiorum, ubi Professores bonarum scientiarum et literarum, ac Studentes earundem, remanere, et suam diuturnam exercitationem habere poterint, ultra et præter alia loca convenientia pro hospitalitate; ideo nos enixe cupientes, ut in honorem Dei et commune bonum nostri regni, literatura indies augeatur, volumus et concedimus, quod licebit præfatis præposito, consulibus et eorum successoribus, ædificare et reparare sufficientes domos et loca, pro receptione, habitatione, et tractatione Professorum, scholarum grammaticalium, humanitatis, et linguarum, philosophiæ, theologiæ, medicinæ, et jurium, aut quarumcunque aliarum liberalium scientiarum, quod declaramus nullam fore rapturam prædictæ mortificationis: Ac etiam præfati præpositus, ballivi et consules, ac eorum successores, cum avisamento tamen eorum ministrorum, pro perpetuo in posterum, plenam habeant libertatem, personas, ad dictas professiones edocendas maxime idoneas, uti magis convenienter poterint, eligendi, cum potestate imponendi et removendi ipsos sicuti expediverit; Ac inhibendo omnibus aliis, ne dictas scientias intra dicti nostri burgi libertatem profiteantur aut doceant, nisi per præfatos præpositum, ballivos et consules, eorumque successores, admissi fuerint: Proviso, quod præsentes nullatenus præjudicabunt, nec actoribus, nec reis, nec aliis interesse habentibus, in ejectione et causâ prosequutâ penes decimas garbales de Dumberny, Potie et Moncreif, ad capellanos ecclesiæ beati Ægidii de Edinburgh pertinentes, neque juri patronatûs ejusdem, sed quod utrique parti, et omnibus interesse habentibus, usque ad finalem exitum et decisionem in hujusmodi, ut congruit, prosequi et defendere liceat, præsentibus aut quibuscunque in eisdem contentis non obstantibus: Proviso etiam, quod ministri deservientes apud dictas ecclesias, pro præsenti et in futurum, sustentabuntur de promptioribus fructibus earundem, secundùm ordinem desuper sumptum seu sumendum: In cujus rei testimonium huic præsenti Cartæ nostræ confirmationis magnum sigillum nostrum apponi præcepimus, Testibus, prædilectis nostris consanguineis et consiliariis, Esmo, Lennociæ duce, comite de Dernlie, domino Tarboltoun, Dalkeith et Aubigny, &c. magno regni nostri camerario, Colino, Argadiæ comite, domino Campbell of Lorne, &c. cancellario ac justiciario nostro generali, Reverendissimo ac venerabili in Christo patribus, Patricio, Sancti Andreæ Archiepiscopo, Roberto, commendatario monasterii nostri de Dunfermeling, nostro secretario, dilectis nostris familiaribus et consiliariis, Alexandro Hay, nostrorum rotulorum registri ac concilii clerico, Lodovico Bellenden de Auchnoule, milite, nostræ justiciariæ clerico, Roberto Scott, nostræ cancellariæ directore, et Magistro Thomas Buquhannane de Ybert, nostri secreti sigilli custode; apud castrum nostrum de Striviling, decimo quarto die mensis Aprilis, anno domino millesimo quingentesimo octuagesimo secundo, regnique nostri anno decimo quinto.

petatur tantum; Ac etiam reddendo nobis et successoribus nostris, pro dictâ superioritate de Leith et burgo baronie ejusdem, omnibusque privilegiis ad easdem pertinen., super solo dicte ville de Leith, unum denarium monete predict. nomine albefirme annuatim, si petatur tantum; Proviso omnimodo, sicuti tenore presentis carte nostre expressè providetur et declaratur, quod universe reservationes et exceptiones fact. a ratificatione predict., in hac presenti cartâ nostrâ content., *proprietatis* habebuntur tam reservat., exceptis etiam de novâ donatione et infeofamentis immediatè prescript., quemadmodum declaratur, quod presens nostra nova donatio, et infeofamentum inde sequen., nec ulla capita nec articuli in hac presenti cartâ nostrâ content. nullatenus comprehendent neque extendentur ad quovis jus regalitatis, nec ultra extendentur penes hereditarie officia vicecomitis et coronatoris, et interdictionem hujusmodi, et tentionem gilde curiarum, sed solummodo intra bondas dict. nostre civitatis de Edinburgh, communium molendinorum, communis more, communis marresii, lacuum, nemorum et fossarum hujusmodi, et intra villas de Leith et Newhevin, portus, receptacula, propugnacula, *lie schoires*, *peiris*, *roadis*, *linkis Eister et Westir*, terras nuncupat. *commoun clossettis Burse Holff Hallis*, et aliarum terrarum ad dict. civitatem nostram, in proprietate spectan. vias, semitas, stratas, plateas, et passagia ad dictam civitatem ducen., et ab eâdem, et ad Leith et Newhevin et ab eisdem, et plateas, vias, et passagia per vel pre ipsorum communem moram et marresiam ducen., et que per ipsos constructa et reparata sunt, quousque dict. mora et marresium extendunt, et ipsorum vias et plateas, ducen. ad ipsorum communia molendina, super aquam de Leith, et ab eisdem quousque dict. molendina, terre molendinarie, et omnes ad ipsos proprie spectan. extendunt; Et quod presens hec nostra carta nullatenus inferret prejudicium et impedimentum nobis nostrisque successoribus in nostro jure et prerogativo regali, ad erigend. burgos regalitatis, burgos baronie in aliquâ aliâ parte Lothiane occidentalis, extra bondas dicti vicecomitatûs et coronatoriatûs, ad quas iidem restringuntur, more predicto; cum hac declaratione omnimodo, quod restrictio dict. officiorum vicecomitat^s et coronatoris, aliorumque predict., ad bondas supraspecificat., nullum inferret prejudicium dict. civitati nostre de Edinburgh, et incolis ejusdem, penes privilegium et libertatem solius negotiationis mercature, *lie sole tread of merchandice*, intra integras bondas Lothiane occidentalis, ad ipsos tanquam liberam civitatem regalem pertinen. Et similiter, per presentis carte nostre tenorem, declaratur, quod virtute ejusdem nostre carte, dict. urbs et civitas nostra, et eorumque successores, nullatenus habebunt, nec pretendent jus ad eschaetas criminalium personarum coram ipsis morti convictarum, neque ad eschaetas quorumcunque incolarum, intra bondas dict. ipsorum vicecomitatûs et coronatoriatûs, ut dictum est restrict., hactenus denunciatarum, aut quas inposterum denunciari continget ad cornu, vel ob criminales vel civiles causas, que in favorem nostram, ut dictum est, renunciantur, et quas nos reservavimus nobis et successoribus nostris, pro perpetuo, non obstan. hac presenti cartâ nostrâ, vel aliis prioribus juribus seu infeofamentis dicto burgo nostro de Edinburgh eorumque predecessoribus perprius concess.; absque prejudicio omnimodo predilecto nostro consanguineo, Jacobo, Duci Lennocie, supremo Admirallo et Camerario dicti regni nostri Scotie, heredibus et successoribus suis, in jure dict. officiorum, de quocunque jure, titulo, seu clameo, que ipse habere potest ad quascunque libertatum, privilegiorum, jurisdictionum, commoditatuum, aut aliorumque quorumcunque in hac presenti cartâ nostrâ content., dict. civitatis nostre de Edinburgh aut ipsorum predecessoribus concess.; aut ratificat. per nos in ipsorum favorem, prout de jure congruit; Et quod dictus Admirallus et Camerarius, suique antedicti, et dict. civitas nostra de Edinburgh, et eorum successores, erint in iisdem statu et conditione, penes omnia jura et privilegia dicta officia tangen. sicuti erant ante diem date presentium, et sicuti presens hec carta nostra nunquam concessa fuisset. In cujus rei Testimonium, huic presenti carte confirmationis magnum sigillum nostrum apponi precepimus, Testibus reverendissimo in Christo patre et predilecto nostro consiliario, Joanne, miseratione divinâ Sancti Andree Archiepiscopo, primate et metropolitano dicti regni nostri Scotie, et nostro cancellario; predilectis nostris consanguineis et consiliariis, Jacobo, Marchione de Hamiltoun, Comite Arranie et Cantabrigie, Domino Aven et Innerdaill; Thoma, Comite de Hadingtoun, Domino Binning et Byris, nostri Secreti sigilli custode, Willielmo Comite de Sterling, vicecomite de Cannada, Domino Alexandro de Tullibodie, nostro Secretario; dilectis nostris familiaribus consiliariis, Dominis Joanne Hay de Barro, nostrorum rotulorum Registri ac consilii clerico, Joanne Hamiltoun de Orbiestoun, nostre justiciare clerico, et Joanne Scott de Scottistarvet, nostre cancellarie directore, militibus, Apud Newmercatt, vigesimo tertio die mensis Octobris, anno Domini millesimo sexcentesimo trigesimo sexto, et anno regni nostri duodecimo.

Order II.—Copies of all the Rules and Regulations or Acts of Visitation of the College of Edinburgh; whether made and prescribed by the Crown, or any Visitors or Commissioners appointed by the Crown or Parliament, or by the General Assembly of the Church of Scotland, or any Commissioners appointed thereby, or by any Bishops or Corporations, or by any Body or Individuals claiming authority to make and prescribe the same.

Return by the Senatus Academicus.

Various Acts of Visitation of the College of Edinburgh have taken place, by different authorities, at the early periods of its history, and an Act of Visitation by the Honourable Patrons took place in 1825; but the Records of the College present little information on the subject, and the Senatus believe that the Royal Commissioners are already in possession of the most material documents.

Returns by the Town Council.

In answering this requisition, it is necessary to divide it into four several heads:—

1. As relates to the Rules and Regulations or Acts of Visitation by the Lord Provost, Magistrates, and Council, as Founders and Patrons of the said College.
2. As relates to ditto by the Crown.
3. As relates to ditto by Parliament.
4. As relates to ditto by the General Assembly of the Church of Scotland, or Commissioners from the several Universities.

1st, As relates to the Rules and Regulations, or Acts of Visitation by the Lord Provost, Magistrates, and Council, as Founders and Patrons.

4th July, 1690.

Act for Visitation of Universities, Colleges, and Schools.

4 July, 1690. Our Sovereign Lord and Lady, the King and Queen's Majesties, and the three Estates of Parliament, considering how necessary it is for the advancement of religion and learning, and for the good of the church, and peace of the kingdom, that the universities, colleges, and schools, be provided and served with pious, able, and qualified professors, principals, regents, masters, and others, bearing office therein, well affected to their Majesties and the established government of church and state; therefore, their Majesties, with the advice of the said three Estates of Parliament, do statute, ordain, and enact, that from this time forth, no professors, principals, regents, masters, or others, having office in any university, college, or school, within this kingdom, be either admitted or allowed to continue in the exercise of their saids functions, but such as do acknowledge and profess, and shall subscribe to the confession of faith, ratified and approven by this present Parliament, and also swear and subscribe the oath of allegiance to their Majesties; and withal, shall be found to be of a pious, loyal, and peaceable conversation, and of good and sufficient literature and abilities for their respective employments, and submitting to the government of the church now settled by law; and albeit it be their Majesties' undoubted right and prerogative to name visitors, and cause visit the foresaid universities, colleges, and schools; yet, at this time, their Majesties are pleased to nominate and appoint, with advice and consent foresaid, the persons undernamed: viz. the Duke of Hamilton, the Earl of Argyle, Earl Crawford, &c. (Here sixty others, consisting of noblemen and gentlemen, are appointed visitors.) to the effect underwritten: viz. with full power and commission to them, or major part of them, hereby declared to be their quorum, to meet and visit all universities, colleges, and schools, within this kingdom, and to take trial of the present professors, principals, regents, masters, and others bearing office therein, according to the qualifications and rules above mentioned; and such as shall be found to be erroneous, scandalous, negligent, insufficient, or disaffected to their Majesties' government, or who shall not subscribe the confession of faith, swear and subscribe the oath of allegiance, and submit to the government of the church now settled by law, to purge out and remove: As also, to consider the foundations of the said universities, colleges, and schools, with the rents and revenues thereof, and how the same have been administered and managed, and to set down such rules and methods for the good management thereof, for hereafter: As likewise, for ordering the saids universities, colleges, and schools, and the professions and manner of teaching therein, and all things else relating thereto, as they shall think most meet and convenient, according to the foundations thereof, and consistent with the present established government of church and state; and to the effect, that these presents may be more surely execute, their Majesties, with advice foresaid, do further empower the foresaids persons visitors, or their quorum, to appoint committees of such numbers of their own members as they shall think fit, to visit the several universities and colleges within this kingdom, with the schools within the bounds to be designed to them, and that according to such instructions and injunctions as they shall think fit to give them; and to the effect, that upon report made by the said committee to the aforesaid visitors, or their quorum, they may proceed and conclude thereupon as they shall see cause; and their Majesties appoints the foresaids visitors to meet at Edinburgh, upon the 23rd day of July instant, for the first diet of their meeting, with power to them to adjourn and appoint their own meetings to such days and places as for thereafter they shall judge convenient; and this commission to endure aye and while their Majesties recall and discharge the same.

(3.)—Instructions by the Commissioners appointed for Visiting the Universities, Colleges, and Schools, to the Committees delegate theranent. 25th July, 1690. R. O. and R. O. (3.)

At Edinburgh, the twentyfifth day of July, j^{m} vj^{c} and ninety years.

The Instructions underwrytten, given by the Commissioners, appointed by Act of Parliament for visiting of Universities, Colledges, and Schools, to the severall Comitties of the saids visitors, conforme to the commissione and delegatione granted to them theranant of the date of thir presents.

25 July, 1690. *Imprimis.* That the committees enquire and take exact tryall of the Masters, Professors, Principalls, Regents, &c. if any of them be eronious in doctrine, and as to popish, arminiane, and sociniane principles, which is to be searched from their dictats, or to receave informatione from other persons who

(12.)—Acts of Commissioners from Universities. 15th September, 1692. T. C.

(13.)—Overtures for the Visitation of Colleges, to begin September 15, 1692, presented to the Commission by the Delegates from the different Universities. E. C. L.

1st. That a good correspondence be establisht betwixt the severall Universityes.

2nd. That it may come under consideration, whither it shall be left to the arbitrement of the respective regents to teach what systeme of philosophie they please (as has been practised for a long time bygone) or that a common course be condescended upon and taught by all.

3rd. If, in this alteration, the writing of dictates be laid aside, and the teaching a printed course introduced; quæritur, if there should not be fewer dyets of attendance for the professors than formerly.

4th. That none be admitted bajans, who have not learned their grammar, and made competent proficiency in the Latin authors; and that none be admitted semies, in one colledge who have not been at another before (foreigners always excepted), or who have learned the Greek grammar, and can expound and resolve the New Testament, or at least the four Evangelists.

5th. That some expedients may be fallen upon for makeing bursers more obsequious and tractable, or for retrenching their numbers, which increasing, proves burdensome and inconvenient. This has been practised formerly.

6th. That some discreet methods be taken for causeing the Latine be more generally and accurately spoken in the colleges.

7th. That the students of divinity be obliged to attend more punctually the professor of Hebrew lessons, as also the Principall's lessons.

8th. That in each of the universities, ane Orator Academicus be nominat yearly.

9th. That the design of monethly exercises be revived and prosecuted.

10th. That the records of every college be diligently searched into, for publishing a fuller and exacter notitia of the universitys than is yet extant.

MEMORANDUM FOR THE COLLEGE OF EDINBURGH IN PARTICULAR.

First. That we humbly desire of the magistrats, a transcript of all the papers relating to the college, as the foundation thereof, the particular mortifications, &c., all which were formerly deposited in the Bibliothec, and were only transported thence in Sir Andrew Ramsay's time.

Secondly. To desire a signature from his Majesty, renewing and confirming all the grants of his royall predecessors to the said college, with a novodamus of all things requisite for the good of the society.

Thirdly. To petition his Majesty for a part of the bishops' revenues, to these following purposes:—

1st. For settling new professions yet wanting, as of law and physic, which would be very useful and beneficiall to the nation.

2nd. To be a yearly fund for enriching the library with all new books that shall be published, and such old ones as are wanting; and for furnishing it with mathematical instruments.

3rd. For augmenting of the regents' salaries, they having only at present 400 merks a-piece, especially ane entire mortification of Mr. William Tweedies, which they formerly enjoyed, being lost through mismanagement.

4th. For compleating the college steeple, which stands unfinished.

5th. For building of lodgings to the masters.

6th. For buying in of ground very conveniently adjacent for that effect last mentioned, as also for being gardens and orchards, &c.

7th. For building more chambers to accommodate the students, and for other pious uses.

(14.)—Protestation that the Commissioners of Parliament for visitation of Colleges are not prejudicial to the good town of Edinburgh's right of Patronage. T. C.
Indorsed "Sir Robert Chiesly was Provost in 1694—1695."

(15.)—Act eximeing Masters or Regents transported to undergoe the Tryall within wryten. 4th February, 1695. R. O. (3.)

Edinburgh the fourth day of February, j^m^ vj^c^ and ninty-fyve years.

4 February, 1695.

The Commission of Parliament, appoynted for visiting Universities, Colledges and Schooles, do hereby enact and declare, that no master or regent, who, hereafter shall be transported from one college to another, shall be subject or lyable to undergoe the tryall, appoynted by ane former act of the commission, dated the twenty-seventh day of September, j^m^ vj^c^ and nyntie years, and notwithstanding yairof.

(16.)—Act directing Accounts of the Foundations and Mortifications left to the several Colleges, and of the Salaries of Masters and Professors to be transmitted to the Clerk of the Commission. 4th February, 1695. R. O. (3.)

The Commission of Parliament, appoynted for visiting Universities, Colledges and Schooles, do hereby appoynt and ordain, the professores, masters, and other overseers of the haill universities and colledges, within this kingdom, to transmit ane account to the clerk of the commission, of their severall foundationes and mortificationes made and left to them, and what sallaries the severall masters and professors have allowed them, and how the rents and revenues of the saids universities and colledges, are presently managed and employed, and ordaines the University of St. Andrewes particularlie, to send ane account of the half moneths cess, given to that universitie by the Parliament, and how the same hes been employed, and appoynts the forsaids accompts to be sent, betwixt and the first Munday of April next.

(17.)—Report of the Committee appoynted for preparing Acts and Overtures anent Universities, Colledges, and Schools. 4th February, 1695. R. O. (3.)

1st. It is the opinion of the committee, that the professor of the Greek tounge be fixed to the class,

719

University of Edinburgh.

Appendix. Order II.

4 February, 1695.

their being far fewer eminent in that skill than in philosophy, and that nothing be taught that year but Greek.

2nd. That the samen year the logicks be taught, without mixture of what concerns metaphysicks, and that therewithall the common terms, notiones, and axioms, be taught.

3rd. That in the third class, the ethicks, generall and speciall, the practice of oratry, and also the general physicks, be taught.

4th. That in the fourth class there be taught the speciall physicks and the pneumatologia.

5th. It is also the opinion of the committee, that the hebdomader be obleidged to ly within the colledge the tyme of his office, and that he visite the students in their chambers every morning befor six of the clock, and every evening at nyne of the clock.

6th. That all masters or regents, and also the students in the seaverall universities and colledges within this kingdome, be obleidged to wear constantly gownes the tyme of the sitting of the colledges, and the regents or masters shall be obleidged to wear black gownes, and the students red gownes, that thereby the students may be discurraged from vageing or vice.

7th. That at the tyme of the laureatione, the students be strictly and exactly examined by the principalls and regents, and that, at ther promotion, ther be distinctione made by the masters of some of the pregnant spirits in the class, who are to (be) called by ther name in order before the rest of the class, and that none receave degries but these that are qualified.

8th. That in tyme coming, noe persone be admitted ane professor or regent in any university or colledge within this kingdome, to have the governing of students, unless they be of the aige of twenty-one years compleit at least.

9th. As also, that the masters and regents of all universities and colledges within this kingdome, doe begine the teaching of ther course for the subsequent year upon the first lawfull day of November, and to continue teaching till the last day of June thereafter, except the regent of the magistrand class, who is to continow teaching untill the ffirst day of May yearly.

10th. As also, that it should be enacted, that noe student shall be heireafter admitted into any colledge who has bein any former years studieing in any other colledge, unless he produce sufficient testificats of his good behaveour, signed by his regent or the principall of the colledge where he last studied, and which testificate they shall be obliged to grant when required, unless they can give very pregnant reasones for ther refuiseing: and if the masters, being required, shall refuse to grant the saids testificats without just cause, then it shall be leisum to any colledge to which the student applyes, to receave him, without obleidging him to produce the said testificate.

11th. And also, that in tyme comeing, the students shall not spend ther tyme in wryting ther courses of philosophie in ther class, but in place therof, that there be ane printed course thought upon, and to that end, that tymeouse intimation be given to the professors and masters of the haill universities and colledges within this kingdome, to send two of their number from every colledge to Edinburgh, the last Wednesday of July nixt to come, and sufficiently instructed to meitt with these of the Commission of Parliament, appoynted for visitation of universities, colledges, and schools, and to advyse and consult with them what methode should be fallen upon for writing and printing an uniforme course of philosophie to be heirefter taught in all the colledges.

12th. As also, that when the commissioners from the severall colledges meit the last Weddinsday of Jully nixt, that they then take to ther consideration how expedient it will be for the haill colledges to meitt by ther delegats every year, and report ther opinion, with ther reasones for the same, to the ginerall meitting of the commission or ther committee.

13th. It is also the opinion of the committee, that the severall classes in the colledges, when they first enter and convein, be all publictly examined in the common hall, in presence of the principall and haill regents of the colledge, who shall all be obleidged to convein for ther saids examinationes.

14th. That all bursers be strictly examined every year, and that such as doe not deuly attend and make sufficient proficiencie in ther studies, be turned out of ther burseries.

15th. That every year the regents of the saids severall classes be obleidged to teach to ther students some rudiements of the mathematicks, with ther courses, yearly.

16th. That it be recommended to the principall, professors, and regents, to receave none into the colledges, but upon strict tryall of ther proficiencie in the Latine and Greek tongues respective.

17th. The committee are of opinion, that untill ther be ane printed course of philosophie composed, that the regents shall be obleidged yearly to produce and show, in the beginning of the year, to the principall or dean of faculty of the colledge, the dictats that he is to teach his students the year following, and that these dictats are and shall be subject and lyable to the amendments and correction of the principall and faculty of the colledge.

That at the yearly laureations in the respective colledges, that there be honourable mention made of their founders and benefactors by public recitall.

(18.)—Report of the Committee to be sent to all the Universities, 4th February, 1695, R. O. (3.)

Edinburgh the said ffourth day of February I^m VI^c and nynety-ffyve years..

The Commission of Parliament appoynted for visiting Universities, Colledges, and Schooles, having heard the report of the Committee of their number appoynted for preparing acts and overtures anent universities, colledges and schooles, read over in their presence, they do appoynt the clerk to send to every universitie and colledge within this kingdom, ane full double of the act and overture contained in the report prepared by the Committee, to the effect they may consider and deliberat upon the same, and send their respective opiniones thairanent to the said Commission of Parliament, betwixt and the first Munday of Aprile next to come, att which tyme the Commission will take the said report to their consideration, with the opinion of the severall colledges thairanent, and reduce such of them into acts as they shall think fit and expedient.

4 February, 1695.

(19.)—The humble Opinion of the Faculty of the University of Edinburgh, about the Overtures the Honourable Commission of Parliament for visiting Colleges and Schooles. Aprile 1, 1695. R. O. (1.)

1st. As to the first, wee agree to the fixation of a Greek professor; provided that it be delayed till a vacancy happen; and that then a program be issued forth *in hunc effectum.*

1 April, 1695.

University of Edinburgh.

Appendix. Order II.

1 April, 1695.

2rd. Agrees to the second, in case no Greek be taught that year after the beginning of November.

3rd. and 4th. To the third and fourth agrees unanimouslie.

5th. Consents to the fifth, where there is a competent number of students lyeing within the college, as required to be visited.

6 h. As for the sixth, about wearing gouns, it was never practised in this college; nor imposed at the oundation of it, because of our different circumstances from other universities in this kingdome. And this imposition would readily drive away the nobility and gentry to other places of education. But as for the masters walking the streets in their gouns, it would appear somewhat singular and anti ue, if in the meanwhile none of other learned professions did the like. We can assign manifold reas ns further, if it be needfull.

7th. To the seventh, agrees to a strict examination, and to the graduating none but those that are tolerablie qualified. But as for the circulation, it was never in use here, and is laid aside in the other colleges, because of the manifold inconveniences attending it.

8th. As to the eighth agrees, *cæteris paribus*.

9th. To the ninth agrees.

10th. We homologat the tenth in all points.

11. Agrees to the eleventh, when it can be conveniently done.

12th, 13th, and 14th. Agrees to the twelfth, thirteenth, and fourteenth.

15th. Assents to the fifteenth, *salvo jure* of the Professor of Mathematics.

16th. Agrees to the sixteenth.

17th. The seventeenth is not easily practicable; but it shall be endeavoured.

18th. The last is a laudable custome.

Laus Deo.

Note.—*The opinions of the other Universities respecting the overtures in question are printed in the volumes severally relating to those universities.*

(20.) Act of the Commission, directing the Universities and Colleges to send Delegates to meet the Commission in July. 14th May, 1695.

Edinburgh, the fourteenth day of May, j^m vj^c and nyntie-fyve yeares.

14May, 1693.

The Commission of Parliament appointed for visitation of Universities, Colledges, and Schools, do hereby enact and ordain, that the haill universities and colledges within this kingdom, do send two of their number from every colledge to Edinburgh, the last Wednesday of July next to come, well and sufficiently instructed, to meet with the said commission of Parliament, and to advise and consult with them anent ane uniforme course of philosophie, to be hereaftter taught in all the colledges, and anent any thing els relateing to the universityes and colledges of this kingdom; and appointes the clerk to give tymeous intimation of this act to the saides severall universities and colledges, that they may give due obedience hereunto, as they will be answerable.

[Not stated whence obtained.]

(21.)—Acts of the Commission of Parliament for visiting Colleges. 15th May, 1695. R. O. (3.)

Edinburgh, the ffufeteinth day of May, I^m VI^c and nynety ffyve years.

15 May, 1695.

The which day the Commission of Parliament appointed for visiting Universities, Colledges, and Schoolls, takeing to ther consideration the acts and overtures formerly prepared by ane committee of ther number, with ane ordinance of the Commission, appointeing the saids overtures to be transmitted to the seaveral universities and colledges within this kingdome, for ther opinion thereanent; together with the reports from the principalls, professors, and masters of the saids respective universities and Colledges, anent the saids overtures.

The Commission superceids to make any act or statute for ffixing the regent of the Bagan class, or appointing what shall be taught to the students the four years they are in the colledge, specified in the first four articles of the said report, untill the last Weddinsday of Jully next to come, which is the day appointed for ane meitting of the haill seaverall colledges by ther delegats with the Commission of Parliament, att which tyme the Commission declairs they will consider the saids first ffour articles.

The Commission approves the fyfth article, and statuts and appoynts the hebdomodars to lye within the colledge the tyme of his office, and that he visite the students in ther chambers every morning before six of the clock, and every evening befor nyne of the clock.

The Commission approves the sixth article, and statuts and enacts, that all the students in the severall universities and colledges within this kingdome be obleidged to wear constantly gownes dureing the tyme of the sitting of the colledge, and that the regents or masters be obliged to wear black gownes, and the students read gownes, that therby vageing and vice may be discurradged; and in regaird the wairing of gownes hes never been in custome in the Colledge of Edinburgh, the Commission doe herfor recommend to the masters of that colledge to endeavour to bring the custome of wearing gowns ther in practice.

The Commission appoynts and enacts as to the seaventh article, that at the time of the laureation the students be strictly examined in presence of the masters and regents publictly, and that none receave the degrie of master of airts but such as shall be found sufficiently qualified by the faculty of the colledge. And alse, that none receave degrie who are vitiouse and guilty of immoralities, untill they satisfie the masters as to ther amendment of lyfe.

Approves the eight article, and enacts, that no person in tyme comeing be admitted ane professor or regent in any university or colledge within this kingdome to have the government of students, unless they be at least of the aige of twenty-one years compleit.

Approves the nynth article, and enacts, that the masters and regents of all the universities within this kingdome doe begine the teaching of ther course for the subsequent year upon the first lawfull day of November yearly, and to continow teaching till the last day of June therefter, except the regent of the Magistrand class, who is to continow teaching till the first day of May yearly, but (without) prejudice, nevertheless, to the colledges who are in use to convein sooner, that they convein conforme to ther former custome; but not to begine the work of the following year till the first of November.

Approves the tenth article, and enacts, that noe student shall be heirefter admitted unto any Col-

ledge who have bein any former years studieing in any other colledge, unless he produces sufficient testificats of his good behaveour, signed by the principall or regent of the colledge where he last studied; and which testificats they shall be obleidged to grant when required, unless they can give very pregnant reasones for ther refuiseing. And if the masters, being required, shall refuse to grant the saids testificats without just cause, then it shall be leisum to any colledge to which the student applyes, to receave him, without obleidgeing him to produce the said testificate.

As also, the commission enacts, that noe student haveing finished his course in one colledge, shall be allowed to take his degries in ane other colledge, without the consent of the masters of these colledges where he finished his studies. And which consent the masters who administrats the degrie shall be obleidged to keep for ther warrand.

The commission approves the thirtein article, and statuts and appoynts, that the severall classes within the colledges, when they first enter and convein, be all publictly examined in the common hall, in presence of the principall and haill regents of the colledge, who shall all be obleidged to convein for the saids examinationes. And ffarder ordaine, that the haill students shall be obleidged to enter to ther respective classes yearly befor the public examinationes, with certificatione if they failzie to enter in due time, they shall not be therefter admitted, without ane excuse that shall satisfie the masters. And if the excuse be admitted, the student shall undergoe the same publict examination as iff he hade entered in due tyme. And sicklyke the Commission appoynts that the haill classes be also publictly examined in the end of the year, befor they be dismissed, and that none desert ther class, whill the saids examinationes be over, without ane licence from ther master. And befor the said licence be granted, the student shall undergo the said publict examination; certifieing such as goe away befor the saids examinationes, and without licence, they shall not be promotted to ane higher class the next year.

Approves the fourteinth article, and appoynts, that all bursers be most strictly examined, and that such as doe not dewly attend and make good proficiencie in ther studies, be turned out of ther burseries; and that none be receaved bursers, unless they bring sufficient testificats of ther good behaveour from the presbytery, minister or kirk-session of the paroch where they dwell, and produce the samen befor ther admission.

Approves the fyfetein article, and statuts, that every year the regents of the severall classes be obleidged to teach ther students some rudiments of the mathematicks with ther courses.

The sixtein article anent the tryall of students of ther proficiencie in the Greik and Latine tounge delayed till the last Weddinsday of Jully next.

Approves the seaventeinth article, and enacts, that untill there be a printed course of philosophie composed, that the regents shall be obleidged to produce and show to the principall or dean of faculty of the colledge, the dictats that he is to teach his students yearly; and that these dictats are and shall be subject and lyable to the amendment and correctione of the principall and faculty of the colledge. And which dictats must be shown befor the same be taught.

Approves the eightein article, and enacts, that at the yearly laureationes in the respective Colledges, ther be honourable mention made of the founders and benefactors be publict recitall.

(24.)—Minutes of the Commission. 31st July and 1st August, 1695. R. O. (1.)

(25.)—Answers by the Commissioners of the four Universities, to the Queries proposed by the Commission of the Visitatione of Colleges, July 31, 1695. Edinburgh. R. O. (3.)

My Lords,

31 July, 1695.

Wee haveing taken to consideratione the questions proposed by your Lordships, as to the fitnes of a printed course of philosophy, do chearfully concurr to forward the same, not doubteing but your Lordships will, at the same tyme, be carefull to prevent the inconveniences which attend all changes, and may attend this change of the method of learneing; and as to the way of putting this in practice, wee humbly conceive that the best way will be, by causeing compose a compleat systeme of philosophy as speedly as may be, to be taught in all the universities at once; for wee cannot think it adviseable, that any course already printed can be fit, for the following reasons.

1mo, It is altogether dishonourable to the universities, and the famed learneing of the natione, that a course of philosophy should be made the standard and course, by authority established, which none belonging to any of the universities have composed. 2do, Nor, when we have seriously perpended the several courses of philosophy which are extant, can wee find any that wee can recommend or think fitt to be taught, for not only wee cannot think on any one wholl course of philosophy wryte by any one man; but wee can not find any one intire pairt of philosophy, which wee can recomend as sufficient to be taught; for many of them ar wryte by popish professors, and therin they cunningly insinuate the heretical tenets, mixing them with their philosophy, which are not so easily discerneable by the youth; nor are the courses of philosophy wryte, and calculate to be taught the youth, but rather to shew the mens pairts who write the same, and for the use of these who have made progress in philosophy. The course that runs fairest is *Philosophia vetus et nova;* which is done by a Popish author, and smells rank of that religione, but therein the logicks are barren, and nothing of the topicks. The metaphysicks barren, the ethicks erroneous, and the physicks too prolix for *ars cogitandi;* though it be a pretty book, yet can not be the standard to be taught, laboureing with obscurity, fit only for the more adult, and not intelligible by youths; short in the topicks, and runs out in many digressiones idly, and makes use of Protestant arguments as examples of sophisms: and his treatise *de methodo* is very dangerous. Derodon, his large logicks are too prolix, his contracts are very defective, his ethicks hardly deserve that name, running only out *de libero arbitrio, &c.* and his physicks only some generall questions. Burgesdick's logicks have only positive doctrine, and none of the disputes which are absolutely necessary for the youth in their logicks, to fitt them to dispute; nor gives he arguments and reasons for what he sayes.

Henry Moor's ethicks can not be admitted, being grossly Arminian, particularly in his notione *de libero arbitrio.* Mr. Gauen, he is prolix in his didacticks, and obscure in his elenticks, bringing in many heterogenous things. De Frize, his determinationes ontologick and pnewmatologica, ar nothing but mere theses, and so too short and defective. His exercitationes ar only miscellany questions.

University of Edinburgh.

Appendix. Order II.

31 July, 1695.

Le Clerk is merely scepticall and Socinian: for Cartesius, Rochault, and others of his gang, beside what may be said against their doctrine, they all labour under this inconveniency, that they give not any sufficient account of the other hypotheses, and of the old philosophy which must not be rejected, and were never designed to be taught to students. And so upon the wholl, wee can not think on any course of philosophy extant sufficient to be taught; and though we would, ther is this other insuperable difficulty in teaching any printed course whatsomever, and that is, that coppies cannot be gott of any one book to serve the students in the universities, against the colledges sitt down, nor can they ever be hade of any one of these books till reprinted, and so we humbly conceive the method hitherto keeped, may be continued till our printed course be ready. As for fixeing the Bajan class, that thereby the students may be more skilled in that language, wee humbly suppose that the fixatione of the Bajan class, and placeing one of the present professors of philosophy as professor of Greek, will be hard, being a very great prejudice to the persons themselves, and no advantage to learning: for he cannot teach more Greek in one year than what is done yearly by all the regents; and if it be designed that the students in other years may be taught Greek, that may be provided that some tyme be allowed in every class every week, to instruct them both in Greek and Latin, at least in some of the criticisms thereof: but if the designe be to provide ane eminent professor in the Greek language, that will take tyme, and the present professors of philosophy continued till a vaicancy be in each university, and then a professor may be fixed as is proposed.

And all allongst we humbly begg the honourable commissione may consider the severall foundationes of the universities, that no entrenchments may be made thereon, when it may be otherwise ordered, in respect the Parliament, in their acts, hath so great a regaird to the severall foundations of the universities, as they express.

(26.) Act anent the composing a Course of Philosophy, to be taught in all the Colleges, &c. 1st August, 1695. R. O. (1.)

Acts and Regulations of the Commissioners of Visitation.

Edinburgh, the first day of August, j^{m} vj^{c} and nyntie-fyve yeares.

1 August, 1695.

The Commission of Parliament for visiting Universities and Colledges, having mett with the delegates sent from the severall colledges, and heard them both *scripto* and *viva voce* anent ane uniform printed course of philosophie to be hereafter taught, do statute, enact, and ordain, That the ordinary custome of dictating and writeing of notes in the classes be discharged from and after the moneth of October j^{m} vj^{c} and nyntie-sex yeares; and ordain, That in place yairof there be a printed course or systeme of philosophy composed, to be taught in all the colledges. And the commission appoyntes the faculties of philosophie in the severall colledges to compile the said systeme; and for that end ordaines the said faculty of every colledge to meetand conveen, and to appoynt ane or mae of the regents of the said faculty, to compile that part of the course appoynted for each colledge's share; and ordaines the person or persones sua to be appoynted, to perform and doe the work that the faculty layes upon them: and if they refuse or faill in the performance yairof, the commission declares he or they shall *ipso facto* be exauctorat and deprived of their office. And ffarder, the commission appoyntes the said systeme or course of philosophie to be composed by the faculties of the severall colledges, conform to the division following, viz. That the logicks and generall metaphysicks be composed by the two colledges of St. Andrews, and the generall and speciall ethicks by the colledge of Glasgow; the generall and speciall physicks by the two colledges of Aberdeen, and the pneumaticks or speciall metaphysicks by the colledge of Edinburgh; and appoints the faculty of each of the saids colledges to give in a scheme, of what pointes and articles they are to treat of in each of their parts of the said work, to the commission of Parliament, or their committee, against the first Wednesday of October next; and appointes the several colledges to keep a correspondence amongst themselves during their writing of their several parts of the said work, and that they send parcells of their writings to each colledge, that the same may be revised, and that each of the saids colledges be assistant to others for the better carrying on of the said work. And the commission appointes a generall meeting of the haill colledges by their delegates, to be att Edinburgh the first Wednesday of Jully next to come, att which tyme they are to revise the whole systeme and course of philosophy, which is hereby appoynted to be in readiness against the said day. And that they present the same to the said commission of Parliament, that the same may be approven, and putt to the press against the first day of August yairafter. And the commission recommends to the faculties of the severall colledges, that they be exact and diligent in composeing the said systeme, for the nation's and their own credit, with as much succinctness as can be; and for their encouragement, the commission declares they will write to the Secretary of State to interpose with his Majesty, that he would be pleased to give a gratification of ffiftie pound sterling to each colledge at the compleating of the said work.

The Commission of Parliament for visiting Universities and Colledges, do statut and enact, that hereafter none be admitted into the first class (commonly called the Bajan class) of any colledge of this kingdom, but upon strict tryall of their proficiencie in the Latine tongue, and that none be admitted or received into the Semi class, but upon strict tryall of their proficiencie in the Greek tongue.

The commission considering, that by their Act, dated the first day of August, j^{m} vi^{c} and nyntie-fyve yeares, they have appoynted the faculties of the severall colledges of this kingdom, to compose a systeme of philosophie, according as the several parts yairof are divyded among them, and that the colledges are appoynted to give in a scheme, of what poyntes and articles they are to treat of in each of their parts of the said work, to the commission of Parliament, or their committee, against the first Wednesday of October next; and it being necessarie, that in case yair be not then a full meeting of the commission, that yair be a committie appoynted to receive in the saides schemes from the severall colledges, that the work be not delayed, therefore the commission appoyntes Patrick Lord Polwarth, Sir David Home of Crocerig, and Sir William Hamilton of Whytelaw, both senators of the College of Justice, Mr. John Law, Mr. George Campbell, Mr. Gilbert Rule, Mr. George Meldrum, and Mr. David Blair, ministers, Mr. James Smollett, one of the commissaries of Edinburgh, or any fyve of them, to be ane committee, to meet the said first Wednesday of October next, and to receive in the saids schemes to be sent to them from the severall colledges, and to revise and consider the same, and to approve or amend them as they shall think fitt; and to doe all other things necessar and needfull yairanent.

The Commission of Parliament, for visiting Universities and Colledges, considering their former Act, dated the fifeteen day of May last, anent the masters admitting of excuses from their students for their late entering to the colledge, and granting licence to remove yairfrom befor the tyme appoynted

723
University of Edinburgh.

1 August, 1695.

by the said Act: The commission appoyntes, that all the saids excuses to be admitted, or licences to be granted by the master or regent, shall be alwayes with consent of the principall of the colledge.

The Commission of Parliament appoynted for visiting of Universities and Colledges, statutes and ordaines, that the masters and students of the severall colledges be obliged carefully to attend the publick worship together on the Lord's day; and that after the afternoon's sermon, the regents and students conveen in their severall classes; and that the students give ane account to the regents of what they heard that day: And also, the commission appoyntes, that the regents be obliged to have ane sacred lesson weekly, and that they require ane account yairof from their students on Munday morning, or on the Saturday afternoon, where it is customary; and that the regents cause the students repeat the catechisme, and teach and explain to them the confession of faith, and any other author that shall be agreed unto by the respective faculties of the severall universities and colledges.

The Lord Crocerig chosen Preses.

The Commissione to the Comitie with the instructiones read.

31 January, 1698.

Mr. Traill admitted a member, having taken the oaths; the Colledge Theasurer gave in a protestation to save the touns rights; Mr. Rule, the Principall, called and asked as to the articles of the instructions, to the first article answered, That he knows of no Arminian, Socinian, or Popish principles taught, but that ther are some philosophick poynts taught, with which he is not fully satisfied; but he can pass no opinion whether or no the same be erroneous, untill these courses presently lyeing befor the Commission be adjusted. To the second answers, He knowes nothing of it. To the third answers, He knowes nothing of it. To the third, as to the conveniendums, They keep thrie conveniendums on from 7 to 9, and the second from 10 to 12, and in the afternones the bagans and batchelers meets on day, and the semes and magistrands on an other day in the afternoon from 2 to 4, and this they doe on thrie dayes in the week, viz. Munday, Wednsday, and Fryday, and the fornoon meetings are every week day; and that the masters doe keep the dyets pretty weill; and for the nonattendance they pay a mulct, and for ther immoralities they hear of, and that both principall and masters have their public and private censures. The publick censure gives up accompt of their immoralities, and that the private censure sometymes give up accompts of what they hear, whilk is not considerable. And when he hears of any, he rebooks them. As to the hebdomadares office, all that he does here is, that they are obleist to be heir sometyme befor the ordinar dyets of meeting, to keep good order among the students, which is practised, *per vices*, weekly. To the article of examining the students, answers, That they go through them by the catallogues; but the masters can best answer that. As to the sacred lessones, answered, That some of the classes convyne on the Lord's day, after sermon, frequently, and others but seldome: that the humanity class, bajans and semes, teach the Confession of Faith, and the batchelers and magistrands teach Rysenius for their sacred lessones. As to the keeping of the kirk, answers, That all cannot be present, because the lofts allotted to the students wold hardly contain the half of them; and that the parents of some takes ther children to other churches or meeting houses, and some gó to no church at all; and that the lofts are seldome full. As to ther masters sufficiencie, answers, That he thinks all the masters are sufficiently qualified for ther employ-

University of Edinburgh.

Appendix. Order II.

31 January, 1698.

ments, and that, for any thing he knows, ther cariadge are weill enough. As to what the professores are teatching, answers, That he himself teatches a lesson weekly to the students in the common hall.

Prayers said,—Mr. George Campbell, Professor of Theologie, called, and compearing, he did represent, That whereas ther is a fond for ane other Professor of Divinity for this Colledge, and that ther was a patent comme from the King to Mr. Meldrum, but by his influence he has got it hitherto delayed, so that office is not yet supplyed; and being inquyred what lessons of divinity he teaches, he answered, That he kept dyets of instruction to the students severall conveniendums in the week, and teaches Ashenius and Marki *Medulla Compendii* and severall other authors, and also teatches some in the Irish language, and causis the students have homiles and exercises both in the Latine, English, and some Irish language frequently. Mr. Campbell signed the Confession of Faith.

Therafter, the Regents and the other Professors called, compeared, Mr. Law, Mr. Rou, Mr. Scot, and Mr. Dundas, Regents; Mr. Rule, Professor of Hebrew; Mr. Gregorie, Professor of Mathematicks; and being inquyred at if they had taken the oath of alleadgeance, and signed the assurance with the Confessione of Faith, they ansuered, That they had all taken the oath of alledgeance and assurance before the town councill at ther admission, and had signed the Confession of Faith before the last comittie, except Mr. Dundas, who had then some indispositione in his hand, but was now ready to signe the same, which accordingly he did. The preces recommended to thit haill masters gravity and good example to ther schollars, and even in ther usuall habees.

Thereafter, Mr. Law called in, and asked partlie anent the articles of the instructiones, and partlie as to ther dyets of examination, answered, That ther is a pairt of every diet spent in examinatione which he constantly practises, and beleives other does the like; and for the sacred lessones, repeats what the principall answered, and that he keeps dyets every Lord's day after sermon, and that the masters goe ordinary to the colledge seat in the Gray Frier Church, and that the hebdomadar is constantly in that church at both dyets with the students.

Mr. James Gregory, Professor of Mathematicks, called, and asked if he knew any immoralities among the professors, answered, He knew nothing. And being asked anent his lessones, answered, He hes lessones tuise in the week, viz. on Monday and Wedinsday weekly.

Mr. Andrew Massie called, and being asked if he knew any erroneous doctrine taught in the colledge, or if ther be any immoralities in any of the masters' lyfe and conversatione, answered, He knew nothing. He also said he keeps the dyets precisly, both week day and Lord's day.

Mr. John Row, ane of the Regents, called, and asked upon the instructiones, answered That he knew of no ill doctrine taught nor immoralites practised, and that he kept the dyets both week dayes and Lord's day.

Mr. William Scot, ane of the Regents, compearing, and asked the same questions, answered as the other regents.

Mr. Alexander Rule, Professor of Hebrew, asked anent the masters' doctrine and immoralities, answered, He knew nothing amiss; and being asked anent his dyets of teaching, answered, That he hes a publict lesson on the Mundays and Saturdays in the forenoon.

Mr. Laurance Dundas, Professor of Humanity, called, and asked anent his colleagues' deportment, answered as the others did. And for his sacred lessones, teaches the catechiss and confession of faith, and keeps the dyets with the other masters both on week dayes and Lord's day. The comittie appoints the colledge theausurer to attend ther nixt sederunt, and to bring with them the foundationes of the colledge, with the accompt and instructiones of the revenew therof, and to drau out a list of all the mony dotted to the colledge, and the persons who left the same, and to what professions the same was given, and that the clark make intimatione heirof to the theasurer. A letter received from Geo. Meinzes, schollmaster of Dundee, intimating that the Laird of Guthurie in Angus left a mortification for four bursares long agoe, which wold be inquyred after.

(43.)—Order that intimation be made to the Principal and Professor of the College of Edinburgh to produce the Pneumatologia, or special Metaphysicks, corrected and amended; with certification and recommendation of the Commission to the Patrons to defray the expense of making seven copies of said Course. 31 Jan. 1698. E. C. L.

Att Edinburgh, the therty-one day of January, j^m^ vi^c^ and nynty-eight years.

31 January, 1698.

It is ordered that intimation be made to the Principall and Professors of the Colledge of Edinburgh, that they produce before the Commission, against Munday nixt, the Pneumatologia, or speciall Metaphysicks, composed by them, corrected and amended, as was formerly appoynted, and that they have seaven doubles therof compleit, in readieness to be produced against the said Munday nixt, being the seaventh day of February nixt to come, in order to be transmitted to the severall Universities and Colledges, with certification if they ffailzie heirin, that the Lords and others of the Commission will proceed against them as contemners of their authority, and depryve these that are guilty of their offices in the Colledge.

Eodem Die.

The Lords and others of the Commission doe recommend to the magistrats of Edinburgh, patrones of the Colledge yairof, and to the Colledge Theasurer, to advance to the Principall of the said Colledge, or such as are imployed to wreat the Course of the Speciall Metaphysicks, as much money as will defray the expence of writing and doubleing seaven coppies of the said course of philosophie enjoyned to be composed by them.

(71.)—Act of Commission anent the Greek and Philosophy Class in each College, 16th August, 1700, E. C. L.

Att Edinburgh, the sixteein day of August, j^m vij^c years.

16 August, 1700.

The Commissioners appoynted by Act of Parliament, for visitation of Universities, Colledges and schoolls, takeing to their consideration, that it would conduce much to the better learning and for the improvement of the study of the Greick tongue, that the teacher of the same, in the first of the four classes in use, for Greick and philosophie, in each university and colledge, were fixed, and not ambulatory as now he is, doe therefor, for heirefter appoynt and ordaine, that the said teacher of the Greick tongue, be fixed, and continow still to teach the same in the said first class, to all that come to learn under him from year to year, as constant master of the said Greick language, which he is heirby appoynted to begine to teach, att and after the first day of November, through the whole year, untill the ryseing of his class by the ordinary vacation, soe that in all that space, he is only to teach the Greick Gramour and propper Greick authors, without teaching so much as any *structura sylogismi*, or any thing else belonging to the course of philosophie, which is only to be commenced the nixt year therafter; and this act and ordinance, to take effect after the first day of November nixt, lykeas for the better incurradgement of the said ffixed teacher of the said Greick, it is hereby appoynted, that noe schollar bread at schooll in Scotland, and not fforaigne-bread, shall be admitted to learne the philosophie, or any pairt of the course thereof, in any of the said colledges and universities, unless that he have learned the Greick, at least for the ordinary year, under the said ffixed Greick master, and report ane authentick certificat thereon: and this provision to take effect for and after the year one thousand seven hundred and one, and noe sooner; and ffor the better executing of this Act, it is ffarder ordained, that iff ther be at present any vaccancy of any of the four, ordinarily called

University of Edinburgh.

Appendix. Order II.

1 August, 1700.

masters or professors of philosophy, in any of the saids colledges and universities, the same shall be supplied in the ordinary manner by a fixed Greick master, who is to remain as said is, leaveing the other three to ascend with ther philosophy classes as use is; and where there is noe vacancy, the forsaid fixed Greick master, is for this tyme, to be chosen by the faculty that is then meiting, of the rector and the proffessors, and masters of each of the saids colledges and universities, out of the said four masters, as the said faculty shall determine, which they are heirby ordained to doe, betwixt and the first day of October nixt; and the Greick master that shall be chosen, is heirby ordained, to obey, without reclaiming, with this provision, nevertheless, for his incurradgement, that it shall be in his option, upon any vacancy that happnis, of any of the said three philosophy masters, in his colledge or university, to take himself to his place without any new tryall, in which case, the vacancy of the Greick class shall be supplied by ane to be fixed as above, and the Commissioners ordaine letters and charges to be direct on this act as effeirs, and that the same be furthwith printed and sent to the severall universities and colledges, that none pretend ignorance.—Signed by warrand, in presence of the saids Commissioners, by the Lord Chancellour, and extracted furth of the records of the said Commission of parliament, by me, JAMES HAMILTON.

MINUTS of the last Sederunt read.

Mr. Meldrum and Mr. Blair did report that they hade bein inquireing at Baillie Rule, brother to the deceast Doctor Rule, and some others, who hade access to the doctor's papers, for the book of Ethicks and other papers which they were appoynted to inquire after by the former day's minute, and that they were informed that the said book of Ethicks and other papers were lying by Doctor Rule the tyme of his decease, and were promised to be delivered in to the keeper of the library at Edinburgh, which they understand is not yet done.

The Commission recommends to the saids Mr. Meldrum and Mr. Blair to inquire farder anent the said book and papers, and to endeavour to gett them produced befor the Commission against the nixt sederunt. It being represented in behalf of the colledge of Edinburgh, that a vacancy haveing fallen of one of the Philosophie professors in that colledge befor the downsitting therof, the first of November 1700, and it being appoynted by the Act for fixing the Greek master, that in case of such ane vaccancie, the intrant Regent should be appoynted for that class; yet the magistrats of Edinburgh, who are patrons of that colledge, have appoynted the said intrant master to teach philosophie, as other Regents in that colledge doe: Therefor the saids professors desyred that the neglect of not fixing a Greick master in the terms of the Act of the Commission might not be imputed to them; wherupon the Commission ordered the magistrats of Edinburgh to attend the Commission on Weddinsday nixt, to answer why they did not fix the last intrant regent to the Greick class, in the terms of the foresaid Act of the Commission.

The commission being informed that the Universities of Saint Andrews and Glasgow have not yet elected and fixed a constant master for teaching the Greick tongue in ther several colledges, on pretence of some difficulties and scruples they had in the said matter, the Commission, notwithstanding therof, ordaines the masters of the saids severall Universities to choyse and fix ane master for teaching of the said Greick tongue betwixt and October nixt, in manner appoynted by the said former Act of the Commission, who is to enter to the said class the beginning of the nixt session of the colledges, and to continue therin in manner mentioned in the Act; and that this ordinance should be punctually obeyed, as they should be answerable.

A letter from the masters of the Marischal Colledge of Aberdein, direct to the clerk of the Commission, representing that they hade elected Mr. Alexander More to be fixed Greick professor, who is willing to accept therof, if the Commission continew in ther purpose of putting that Act to execution, and therupon ordered that the said Marischell colledge doe fix and establish the said Mr. Alexander More, professor of the Greick class the nixt downsitting of the colledge.

Ordered, that the Clerk wreat to the severall colledges that they send up to the commission the severall pairts of philosophie composed by them, corrected and amended, as was appoynted by the former Act of the Commission, of the date the seaventh of August 1700; and that the saids books be sent up betwixt the day of nixt to come, in order to be considered by the Commission.

Ordered, that the magistrats of Edinburgh attend the Commissione ther nixt sederunt, for not fixing a Greick master in the Colledge of Edinburgh on the late vacancie.

14th January, 1702.

(Paper quoted on the back thus), Representation by the Magistrats and Toun Councel of Edinburgh, to the Commissioners of Parliament, for visiting of Colledges and Schools, to the Right Honourable the Lord High Chancellor and remanent Honourable Members, appoynted

727

University of Edinburgh.

Appendix. Order II.

14 January, 1702.

by Act of Parliament for visiting of Colledges and Schools,—The humble Representatione of the Magistrats and Toun Council of Edinburgh.

Your petitioners being informed that your Lordships are displeased that one of the four Regents of the Colledge of Edinburgh, was not established a fixed teacher of the Greek, conforme to your Lordships Act of the 16th of August, 1700.

As to which we crave leave, with all deference, to represent to your lordships, that as it is our interest and duty not to give the least umbrage of offence to your lordships, so it is our inclinatione, on all occasions, to have all due regard to your lordships authority, acts and appointments; and to take off all shadow of contumacy, your petitioners do declair, that the forsaid act of the Commission of parliament was never intimat nor made knowen to them, and if ther hes been any mistake in the settling of the last vacancy of ther colledge, it was involuntary upon your petitioners pairt, not knowing that ther was any constitution in the contrar.

May it therefore please yor lordships, to take no umbrage of your petitioners behaviour in that matter, and your petitioners shall lay a full representation of the matter before your lordships, at any time your lordships shall please to appoint, which is humbly hoped, will take off all shadow of contempt, and your petitioners shall ever pray.

Order III.—Copies of all Regulations enacted by the Senatus Academicus of the University of Edinburgh, or any Office-bearer belonging thereto, by which the discipline, government, and course of teaching in the said University are in any way directed or prescribed.

Return by the Senatus Academicus.

From the year 1583 to the year 1603, the Minutes of the College are very imperfect, and have been in the hands of the Town-Council since the year 1703, when they took them away. The Minutes of the College that have been in the undisturbed possession of the Senatus Academicus begin at 1733, and are continued to the present day. From 1603 to 1733, a few detached Minutes are alone preserved. But still, in these Records there is sample proof that, independently of the system of rules entitled 'Disciplina Academiæ Edinburgenæ' (Bower, vol. i. p. 402), the Senatus Academicus were in use to enact regulations of every description, applicable to the business of the University, the discipline, government, and course of study.

As to Government and Discipline a few instances will suffice, though they might easily be multiplied:—

The body of rules and regulations entitled—'Academiæ Disciplina,' (Appendix to Bower's History of the University), was framed by the Principal and Regents. It does not seem to be have been formally sanctioned by the patrons till 1701, but is extant in a register of the University bearing the date of 1644, and is there described as the rules, '*prout observata sunt multis retro annis.*'

1691. Students expelled for delinquencies.

March, 1692. Students dismissed on the 18th, 'but they are to stay longer in time coming, if their maisters shall determine.'

21st October. Collections of money by students for savage practices (boxing, &c.) put down.

18th October. Mr. Gregory, Professor of Mathematics, to give his lessons in the afternoon on his application. But on the 8th March, 1693, Mr. Gregory was ordered to keep up his usual hour of 10 A.M.

9th April, 1693. Students brought before the faculty for a tumult.

As to Degrees:—

14th February, 1773. Act of Senatus for conferring Degrees in Philosophy.

2nd May. } *M.D. conferred.*
5th June. }

28th May, 1734. M.D. to be conferred after defending a Thesis publicly. This is the first mention* of a Thesis in the Minutes, and was ordered by the 'Faculty' alone.

26th May, 1735. Rules fixed as to conferring A.M., regulating the previous classes to be attended, and the fees and the disposal of them.

4th August. Allow a student of three years standing at Cambridge to graduate.

5th January, 1736. Degree of LL.D. not to be given, but on the trial of a candidate, and D.D. on sufficient specimen of merit shown on trial.

11th June, 1736. For D.D. charged 5*l.* 5*s.* to library, and 2*l.* 2*s.* for the diploma and college servants.

16th March, 1738. Mr. Hugh Blair offered to defend a Thesis publicly for A.M., and was eased of the fees.

The following are instances as to the management of the library fund:—

14th February, 1733. Curators appointed to enquire what books should be bought with the money in the library chest, and 'they were empowered to dispose of it as they should see cause.'

28th March, 1735. Librarian empowered to take measures for the recovery of lost books.

11th June, 1736. A fee of 5*l.* 5*s.* was fixed for D.D. to the library.

9th January, 1738. Curators appointed to receive all the money due to the library from any fund whatsoever, and to consider what books were proper to be bought.

16th March, 1763. It was agreed that professors should pay 5*l.* 5*s.* to the library at their admission, and rules were agreed on for its management, fixing matriculation fees, and fees of degrees, which rules were ordered to be hung up in the library.

---

* Various printed Theses of the date 1726 are extant, as 'Diss. Med. Inauguralis De Dolore' Io. Monteith Scoto-Britanna. 4 Nov. 1726. Many others before May. 1734.—Io. Lindesay, Scoto-Brit. De Calore, 22 Nov., 1732. Car. Aytoun Douglas, de Exercitationum in Medicinâ Usu, 4 Jan. 1734.

University of Edinburgh.

Appendix. Order III.

14 January, 1702.

2nd April. 10*l.* to be paid to the library for D.D.
5th December, 1774. Mr. Holles's legacy of 100*l.* to the library received and ordered to be applied.
8th December, 1806. Matriculation fee raised from 2*s.* 6*d.* to 5*s.*
9th March, 1807. Regulations made for the library.

Appended to this return, there are several newspaper advertisements illustrative of the powers exercised by the Senatus Academicus.

Order IV.—A Return of the manner in which the Senatus Academicus, in the University of Edinburgh is composed, and the constituent Members thereof.

Return by the Senatus Academicus.

The Senatus Academicus of the University of Edinburgh is composed of the principal and professors, who become constituent members thereof, *ipso facto*, upon their admission. In case of joint professorships, both incumbents may be present at and take a part in the deliberation; but it has been determined by the Senatus that the vote of one only shall be received.

Every question is decided by a plurality of voices; and in case of equality, the principal has had a deliberative vote, and a casting vote; about his right to the form of which, however, there is a difference of opinion in the Senatus.—*See* *Return* 41.

The meetings of the Senatus are summoned by the principal, professor of divinity, or other member of the theological faculty.

The Senatus Academicus is at present composed of—

Name.	*Date of Admission.*	*Name.*	*Date of Admission.*
George Husband Baird, D.D..	24th Nov. 1792	John Lesslie, ...	30th Mar. 1805

Order V.—A Return of the Office-bearers in the University of Edinburgh: e. g. Chancellor, Rector, &c. and of the Persons or Electors by whom such Office-bearers are nominated or elected, and of the manner in which such nomination or election is made.

Return by the Senatus Academicus.

In early times, the title of *Chancellor* was occasionally assumed by the person holding the office of lord-provost of this city; and from a signature of confirmation, dated in 1688, it appears to have been intended that that title should be perpetually annexed to this office; but the signature here alluded to never passed into a complete deed, owing probably to the confusions attending the Revolution.

The office of *Rector* was held by several persons, though with frequent intervals, during the greater part of a century, from the foundation of the University. It was always conferred by the patrons, who in 1640 established certain rules for its regulation. This office too, was at last annexed by act of council to that of lord-provost, and down to the beginning of the 18th century, the chief magistrate was by the patrons occasionally denominated rector of the university, apparently without any consideration of the question, Whether the offices of chancellor and rector could be competently held at the same time by the same person. From that period, till the provostship of the present chief magistrate, who styles himself rector, the office was never heard of in the University, much less known as an office attended with the performance of any duties.

The following are the actual office-bearers:—

1. *Principal.*—This office is mentioned as synonymous with that of rector, in the instance of Mr. Robert Rollock. It has been regularly continued since 1585. The nomination is vested in the town-council of Edinburgh as patrons.
2. *Secretary*—nominated by Senatus.
3. *Treasurer*—nominated by the Senatus Academicus.
4. *Librarian*—nominated by the patrons.
5. *Under Librarians*—nominated by the librarian.
6. *Conservator of the Anatomical Museum*—nominated by the patrons.
7. Professor Jameson has two commissions, as keeper of the museum or repository of natural curiosities, one from the Crown, and another from the patrons. * * * * * *
8. *Under-Keeper of the Museum of Natural History*—nominated by the keeper.
9. *Printer and Chief Manager of the Press*—nomination claimed and exercised by the patrons.
10. *Janitor*—nominated by the town-council.

729
University of Edinburgh.

11. *Porter*—nominated by the Senatus.
12. *Warder*—appointed by the commissioners for completing the college-buildings, and paid by them.

Order VI.—A Return of the manner in which the Professors are appointed; in what hands the power of Inquiry and Correction, Suspension or Deprivation is vested, or by whom it is claimed.

Return by the Senatus Academicus.

The town-council are patrons of the office of Principal, and of the following Professorships:—

Divinity,	Natural Philosophy,
Oriental Languages,	Materia Medica,
Greek,	Theory of Physic,
Logic,	Chemistry,
Mathematics,	Anatomy and Surgery,
Moral Philosophy,	Midwifery.

In regard to the following chairs there are some peculiarities:—

The Professor of Humanity is elected thus:—

The Lords of Session name two delegates, the town-council name two, the Faculty of Advocates name one, and the Society of Writers to the Signet name one. These meet together and appoint the Professor; they lay their minute of election before the town-council, who issue a commission in their own name proceeding on the narrative of the election of the delegates, and binding the Professor to obey laws and regulations, the same as if he were appointed direct by the town-council.

Scots Law.—The Faculty of Advocates send a leet of two to the town-council, one of whom they must elect Professor.

Civil Law and Universal History.—The same.

Agriculture.—The present Professor received a commission direct from the late Sir William Pulteney, who sunk the money for endowing the chair. Future vacancies are to be filled up by nine delegates—three to be chosen by the Judges of the Courts of Session and Exchequer, three by the town-council, and three by the University of Edinburgh.

Conveyancing.—Mr. Napier, the present Professor, received his commission direct from the town-council. By the act of the council instituting the professorship, it is declared that future vacancies shall be supplied by five delegates, viz., two to be chosen from the town-council, and two from the Society of Writers to the Signet, together with the deputy-keeper.

The Crown is sole patron of the following chairs:—

Church History,	Military Surgery,
Public Law,	Medical Jurisprudence,
Rhetoric,	Practical Astronomy,
Clinical Surgery,	Natural History.

The Professor of Botany holds two commissions, one from the Crown, and another from the town-council.

The first Professor of Materia Medica had also a double commission, but the present incumbent holds that only of the town-council; the Royal Commission, to which no salary was affixed, having been omitted in the case of the two last incumbents.

General Reid has bequeathed to the university a considerable fund for various purposes; among which is the foundation of a Professorship of Music, of which the patronage is vested in the Principal and Professors. But the Senatus do not enter into possession until after the decease of the general's daughter.

The patrons claim the power of inquiry and correction, suspension or deprivation. It has been exercised by the Parliamentary Commissions in 1690, who removed Principal Munro, Dr. Strachan, and others.

The Senatus claims the power of inquiry and correction and suspension.

Unprinted Documents relating to Order VI.

Memorial and Representation on the part of the Ministers of the City of Edinburgh, in regard to the subject of the right claimed by them, on occasion of the appointment of the Principal or Professors in the University of Edinburgh. Presented 5th September, 1826.

Additional Memorial by ditto, on same subject, accompanying Craufurd's 'History of the University of Edinburgh,' from 1580 to 1646. Presented 27th September, 1826.

Returns ordered 29th September, 1826, presented by the town-council, and lying on the table of the Commission, but not printed.

Act of Council, fixing salary of Professor of Divinity, and electing Mr. William Hamilton to that office, 17th August, 1709.

Act of Council, fixing the salary of the said Mr. William Hamilton, in the event of his being chosen a Minister, 1st July, 1713.

Act of Council, accepting of the resignation of Dr. Robert Hamilton, Professor of Divinity, and appointing a committee to confer with the Ministers thereanent, 3rd September, 1779.

Act of Council, appointing the Rev. Dr. Robert Hamilton and Andrew Hunter, joint Professors of Divinity, 10th September, 1779.

Act of Council, appointing a Committee to confer with the Ministers regarding a vacancy in the office of Professor of Divinity, 3rd May, 1809.

University of Edinburgh.

Appendix. Order VII.

ORDER VII.—A Return of the Salaries of the Principal and Professors; specifying the amount of each, and the funds whence derived; by what authority the amount is fixed; and, if by the Senatus Academicus, whether under any, and what control.

(1.)—*Return by the Senatus Academicus.*

The annexed table (appended to Order VIII.) presents a view of all the salaries that fall to be specified in this Return, so far as these salaries are paid by the Crown, or by the magistrates and town-council of Edinburgh.

The present salary of the Professor of Public Law amounts to between 80*l.* and 90*l.*, having been reduced to that amount from about 350*l.* by an augmentation of stipend to the ministers of St. Cuthberts, on the teinds of which it had been previously allocated in 1802.

It was established and fixed by a Privy Seal Royal Grant in 1707, and an allocation accompanying it; and it is drawn out of the tithes of the bishopric of Edinburgh. In 1806, the Professor obtained as indemnity a Privy Seal warrant for an annuity of 200*l.* to him personally, or during his holding the office.

The circumstances relative to this Professorship, and these official measures, are however so various, that Mr. Hamilton deems it proper to offer an explanation to the Royal Commission in a separate paper. A paper intitled, 'Explanation by R. Hamilton, Advocate, Professor of Public Law, &c., in the University of Edinburgh,' on the subject of the said Professorship; presented to the Commission 27th September, 1826.

The Professors of Medical Faculty (with the exception of Anatomy and Botany) have no salary; but by an agreement between the Professors of the Practice of Physic, the Theory of Physic, and Chemistry, the salary of the first physician to his Majesty in Scotland, (being 100*l.*) when held by one of them, is equally divided among them, whoever of them may enjoy the title and other privileges.

The former Professors of Materia Medica held the office of second physician to his Majesty in Scotland, with a salary of 50*l.*, but the late Professor, on being transferred to the Chair of the Practice of Physic, retained the appointment.

The Professor of Conveyancing has a salary of 120*l.* paid by, and from the corporate funds of, the Society of Writers to his Majesty's Signet.

(2.)—*Return by the Town-Council.*—[See Returns appendent to Order X.]

(3.)—*Return by the Secretary of the University of Edinburgh.*

TRANSMITTED,—

(1.)—Copy Commission by Queen Anne in 1707, to Charles Erskine, (then "Professor of Philosophie" in the College of Edinburgh), appointing him to the "Office of Professor of Public Law.

1707. The Commission bears a narrative of her Majesty's intention to "establish and settle ane foundation of ane constant Professor of *the Public Law and the Law of Nature and Nations*; and for that end" to appropriate as a salary a portion of the sum of 300*l* sterling yearly, formerly allowed by King William to the College of Edinburgh for another purpose. The Commission then bears, that her Majesty "erects, institutes and establishes ane Professsor of the *Public Law and the Law of Nature and Nations* within the said College of Edinburgh; and nominates, constitutes, and appoints the said Mr. Ch. Erskine, during all the days of his lifetime, to be professor and teacher of the said public law and law of nature and nations in the said Colledge of Edinburgh, who is to be called now and in all time coming her Majesty's Professor of the Public Law in the College of Edinburgh." Her Majesty, by the said Commission, further appoints and requires "the magistrates and town council of Edinburgh. patrons of the said college, and the principal and haill professors and masters thereof, to admit, enter, and receive him to the peaceable exercise and enjoyment of his said office of professor and teacher of the public law aforesaid in the said College." The salary of 150*l.* yearly is given then and since to the professor.

(2.)—Warrant in the Register of Privy Seal, (English Record, L. 6, s. 193,) by Queen Anne, July 5, 1707, allocating 150*l.* as a salary to Mr. C. Areskine, Professor of Public Law.

This warrant bears that her Majesty had instituted and established "ane Professor of *the Public Law and Law of Nature and Nations* within the College of Edingburgh."

(4.)—Grant by Queen Anne, 13th Sept. 1708, out of the Post-Office Revenue of Scotland, of 210*l.* per annum, in augmentation of the salaries of four Professors of Philosophy, one Professor of Mathematics, one Professor of Humanity, and one Professor of Hebrew.

13 September, 1708. ANNE, by the Grace of God, Queen of Great Britain, France and Ireland, Defender of the Faith, for as much as we, considering how much it may conduce to the promoting of learning in that part of our kingdom of Great Brittain called Scotland, that the publick professors of the Wniversities of Edinburgh be competently provyded for, and understanding that the Professors of the said Wniversitie after named, viz.:—Mr. William Law, Professor of Philosophie; Mr. James Gregory, Professor of Mathematicks; Mr. William Scott, Mr. Charles Areskine, and Mr. Robert Stewart, Professors of Philosophie; Mr. Lawrance Dundas, Professor of Humannitie; and Mr. John Goodall, Professor of Hebrew, are not sufficiently provyded, nor equally with the like professors of the other Wniversities of that part of our said kingdom: Therefore witt ye ws, to have given, granted, and disposed, like as we (of our pious and princely zeal for the good and furthering of the said Wniversitie of Edinburgh), give, grant, and dispose, to the said Mr. William Law, Mr. James Gregory, Mr. William Scott, Mr. Charles Areskine, Mr. Robert Stewart, Mr. Lawrence Dundas, and Mr. John Goodall, equally and proportionally amongest them, and to their successors in office, in all time comeing, the sum of two hundered and ten pounds sterling, yearly, in augmentation of and over and above their present salaries and other profites and emoluments presently possest and enjoyed by them, to be payed to them equally and proportionably as said is, at two terms in the year, Whitsanday and Martimas, by equall portions, beginning at the first termes payment at the terme of Martimas next to come, and so furth, to continue during their brooking and enjoying of their respective offices as aforsaid: And that out of the first and readiest of the revenues and profites arising from the post-office in Scotland, whither the same be lett in forme or under collection for the time, requireing hereby and commanding the

731

University of Edinburgh.

Appendix. Order VII.

13 September, 1708.

ffermers and tacksmen or collectors of the said revenues and profites of the post-office aforesaid, for the time being, to make good and ready payment to the said professors, or any having their orders, of the said summ of two hundered and ten pounds sterling, yearly, equally and proportionably as aforesaid: And also requireing the Lords Commissioners of our Theausire of Scotland, or any to whome the said ffarmers or collectors shall be accomptable, not only to grant the necessary precepts for making the said payments; but also that in any tack or ferme that may be lett of the said post-office, they provyde in the said tack, and take the tacksmen bound to pay the said summ in manner forsaid, declaring all payments to be made by vertue hereof shall be duely allowed in all audits of accounts; and also declaring that the forsaids additionall allouance hereby granted to the professors above mentioned shall only be payable to such of their successors as shall be alloued and approven by the principall and professors of the said Uneversitie, or the major part of them; and that when the place of any of them shall becom vacant, then, and untill it be supplied, the forsaid aditionall sallarie shall be payable to the principall or ye eldest professor of philosophie for the time, and shall be disposed of by the principall and professors of the said Universitie.

Given under our Privie Seall, at our Court at Windsore Castle, the fiftenth day of September, and of our reigne the sixth year, 1707. Sic subscribitur per signaturam manu, S. D. N. Reginæ supra-script. manibus quorundum Dominorum aliorumque. Thesrij et Scacarij Commissionariorum infra dictam Regni Brittaniæ partem subscript.

(5.)—*Transmitted by the Principal of College of Edinburgh.*

Memorial of the Members of the Theological Faculty in the University of Edinburgh, to the Royal Commissioners appointed for the Visitation of the Universities and Colleges in Scotland.

That your memorialists are reduced to a condition altogether different from that which they formerly occupied: That they were originally placed at the head of the establishment, and are still designed, in the presentations which they receive, the First Masters in the University. From the change, however, which has taken place in the circumstances of the country and value of money since their salaries were fixed, their emoluments have become altogether inadequate to the station in which they are placed, and the labour performed. The salaries of the four members of the Theological Faculty amount only to 662*l.* 4*s.* 5½*d.*, and this sum includes 110*l.*, being the amount of the house-rents of three members of the faculty who have the benefit of such allowance. Thus the whole faculty do not receive one-third of what is enjoyed by some of their brother professors. Indeed their salaries are very considerably under the emoluments which the liberality of the public has provided for the ministers who hold the minor livings in the Church, when their manses and glebes are taken into account, while the duty performed is incomparably greater, and is at the least equally important The Principal and two Professors of Divinity receive no fees from their students, and from the spirit of the Ecclesiastical Establishment in Scotland, the other Professor (the Professor of Oriental Languages) can never expect to derive much from this source. The memorialists plead not only their official claims, but the necessity of supporting the dignity and respectability of that important branch of knowledge which it is their business to communicate to the rising clergymen of the country.

May it therefore please the Royal Commissioners to consider the state of the members of the theological faculty, and make such representation as may lead to that increase of their emoluments which will restore them to their former condition in the University, and prove a reasonable remuneration for the labours they have to perform.

(Signed) Geo. H. Baird, *Principal.*
Will. Ritchie, *S. S. T. P.*
Hu. Meiklejohn, *S. S. Th. et Eccl. Hist. Prof. Reg.*
Alex. Brunton, *Professor of Hebrew, &c.*

State of the salaries and emoluments of the members of the Theological Faculty.

The Principal—Salary*	£111	2	2½			
Allowance for house rent†	40	0	0			
Total	£151	2	2½	£151	2	2½
But deducting rent paid for the house he at present actually occupies	103	5	0

				£662	4	5

Order VIII.—A Return of the Fees payable, either by Students on attending classes, or by Candidates for Graduation, at their examination or on receiving Degrees; whether to Professors or to the Libraries, or to any of the Institutions or Funds of the College; of the Authority by which the same are fixed; and whether under any, and what control.

Return by the Senatus Academicus.

(1.)—There is herewith returned a tabular view of all the fees payable by students on attending classes.

A matriculation fee of 10*s.* is extracted from every student (except those enrolled in the Divinity Hall) for the payment of the janitors of the college, and for the support of the library. This sum was fixed by a joint resolution to that effect passed by the Patrons and the Senatus Academicus in 1812.

* Fixed in 1636. † Fixed in 1793.

University of Edinburgh.

Appendix. Order VIII.

Students of Divinity.

Every student enrolled at the Divinity Hall pays 10*s.* each year for the support of the divinity library. An account of this library is sent in Answer to Order LXIII.

The students of divinity are also permitted to matriculate, and have the use of the general library for 3*s.* each year, in consideration of their long previous studies.

Fees for Degrees.

1. *Divinity.*—The fee paid for the degree of D.D. is twelve guineas. Of this one guinea is a fee to the secretary, 8*s.* 6*d.* is given to the janitor for furnishing box for the diploma, &c., and 11*l.* 12*s.* 6*d.* given to the library.

2. *Law.*—The degree of LL.D. is always honorary, and given without the payment of any fee.

3. *Medicine.*—£13*l.* 13*s.* paid on passing the first examination (besides a government stamp of 10*l.*) Of this sum 10*l.* 10*s.* is divided among the six seniour examining professors of the medical faculty; 1*l.* 1*s.* paid to the secretary; 8*s.* 6*d.* to the janitor for furnishing box for the diploma; and 1*l.* 13*s.* 6*d.* to the treasurer of the college, to be paid with the joint matriculation and janitor's fund; —the whole fixed by the Senatus Academicus.

The fee of ten guineas to the examining professors appears to have been fixed by an act of the Senatus Academicus, on 25th October, 1718; the 1*l.* 1*s.* to the secretary, on 10th March, 1763; and the whole sum of 13*l.* 13*s.* was fixed by an act of the Senatus on 10th December, 1803.

It does not appear that any interference of the Patrons took place in regard to the fixing of these fees.

An additional fee of 1*l.* 1*s.* will be demanded of all candidates, for the degree of M.D. who shall commence their studies in the present or subsequent years, for the maintenance of the Anatomical Museum, by a joint resolution of the Patrons and Senatus Academicus in the present year. The fee may be paid at the commencement of the studies of such a candidate, and he will receive in return a perpetual ticket of admission to the museum.—See Order LXI.

4. *Arts.*—£3 3*s.* are paid previous to receiving a diploma. Of this 15*s.* are paid to the secretary; the janitor receives 5*s.* for furnishings; and 2*l.* 2*s.* are paid to the joint matriculation and janitor's fund.

When fees exigible from students have been fixed either by the authority of the Senatus Academicus, or of the patrons of the University, or by a joint act, the usual practice has been to demand the payment from all students from that time. This at least was the practice followed in all the cases above stated, where the time, when the amount of fees was fixed, is certainly known.

I. NARRATIVE.

A correspondence between the Honourable Patrons and the Senatus, relating to the fees taken by professors from the students attending their respective classes, commenced in a communication from the Honourable Patrons, dated 21st October, 1825; in which they request the Senatus to send them a state, showing the amount of certain *small fees* collected by the professors from the students, along with the stated fees for tickets, and to what use applied.

On the 29th October, the Senatus sent in a reply, containing a statement by every professor, during whose incumbency any change on these small fees had been made. No further notice was taken of this matter until the 5th May, 1826, when the Patrons renew the subject, and extend the inquiry to fees in general, desiring that the council may be furnished, without loss of time, with a statement from each professor, for the purpose of the formation by the council of a schedule, to be exhibited in the University library and in the different class rooms. The Senatus sent a reply, informing the patrons that they had no objections to make the return required, but protested against the use intended to be made of it; to which the patrons sent an answer on the 7th August, renouncing the intention of publishing the proposed schedule of their proper authority, but recommending it to be promulgated by the authority of the Senatus. To this communication the Senatus sent a reply on the 29th August, and proceeded forthwith to prepare the desired return, which was transmitted on the 12th September. But before it was possible to collect the information from the professors—many of whom were absent from Edinburgh at this season,—another communication was received from the patrons, in which the subject is put in a point of view, and an allegation is made that the principal fee taken by some professors is greater than what they are legally entitled to. The Senatus sent a reply, with which the correspondence at present rests.

(1.)—Copy of Letter from Carlyle Bell, Esq., Conjunct City Clerk, relative to Matriculation Fund and Small Fees collected by the Professors.

City Chambers, Edinburgh, 21st October, 1825.

21 October, 1825.

Sir,—I have been requested by the magistrates and council to acquaint you, for the information of the Senatus Academicus, that, upon considering the communication in regard to the matriculation fund, with the relative account, they approved and sanctioned the continuance of the matriculation fee at its present rate; but that, in future, the magistrates and council request of the Senatus Academicus to transmit to them, at the term of Candlemas in each year, commencing at Candlemas next, an annual account of this fund; and in the first and subsequent accounts to be furnished, that the Senatus will take the trouble to mention the particulars of the sum stated under the head Miscellaneous Accounts.

I have been further requested by the magistrates and council to state to you that, when they had lately under their consideration two accounts of considerable amount, claimed by John Wilson, the janitor—the greater part of which was for cleaning the different class-rooms of the college,—their attention was called to the fact of certain small fees, varying in amount, being collected by the professors from the students, along with the stated fees for tickets; when the council resolved, that a request be made to the Senatus Academicus for a state, showing the amount of such fees taken by each professor, and to what use applied.

The magistrates and council were the more induced to come to this resolution, from the circumstance of having been informed that the door-keepers of the different class-rooms exact gratuities from the students on returning their tickets—a practice which the council think ought to be immediately done away; and from the consideration that the medical students will be now subjected to an additional expense, on account of their being obliged to attend the midwifery class, &c.

I am, Sir, your most obedient servant,

(Signed) Carlyle Bell.

To Dr. Duncan, junor.

(2.)—Answer by the Senaticus Academicus to the Communication of the Honourable Patrons, of date the 21st October, 1825, relative to the Small Fees collected by the Professors.

Senate Hall, 29th October, 1825.

29 October, 1825.

The Senaticus Academicus inform the Honourable Patrons, that, in general, in regard to the small snms drawn along with fees for tickets, they are the same as, to the personal knowledge of some members of the Senatus, have been drawn for above half a century by professors under the name of class dues;—dues, namely, for coals, and class-servants or door-keepers.

University of Edinburgh.

Appendix. Order VIII.

29 October, 1825.

The following alterations have been made more recently by some individual professors, and they state as under, respectively, concerning them:—

Professor Jameson states that, in his predecessor's (Dr. Walker's) time, there was drawn for the above-mentioned purposes 4*s.* from each student. He (Professor Jameson) has been in the practice of drawing 3*s.* only; but the reason of introducing the change, or the time of his introducing it, has escaped his memory.

Dr. Graham, Professor of Botany, states that he receives from each of his pupils of botany 5*s.*, which he pays over entirely to the gardener. Dr. Rutherford exacted 2*s.* 6*d.* from each. Dr. Graham raised the amount, as it seemed much too small for a most deserving man, whose labour is extended over the whole year—not confined to the time when the class meets. This he is now satisfied was an irregularity; but he hopes the circumstances will justify the measure.

Professor Leslie states, that it has been a practice, of at least more than fifty years' standing in this college, for the door-keepers of each class to expect a gratuity of 2*s.* or 3*s.* on delivering back the tickets after Christmas. But in the more advanced classes there has been some reluctance betrayed, particularly by the richer students, to a compliance with that custom, and many of the tickets left uncalled for, though never refused. He therefore resolved, last session, to put an end to this irregularity, and avoid every cause of incidental jarring; he abolished the Christmas gratuity in this class, and added 15*l.* to the wages of his servant. But he conceived himself warranted by the example of Dr. Copeland at Aberdeen, and the late Dr. Black here, to exact the small fee of 3*s.* on each ticket, as some compensation for the expense incurred by showing numerous experiments. It is, after all, very inadequate. His operator costs him 30*l.* more than in the time of his predecessors; and he likewise incurs a good deal of expense in waste and breakage of glass, &c. He has never heard a murmur from any of his students for this slight assessment, and has always understood that in smaller matters every professor, both in this and in other universities, is left to his own discretion and responsibility. If it were otherwise, the Professor of Experimental Philosophy would be placed in a very different situation from a Professor of Logic, or Rhetoric, or Ethics, who needs no operator, and incurs no expense but a few scraps of paper.

Dr. Monro states, that for a number of years past, 6*s.* have been charged by the professor of anatomy and surgery to meet a very small part of the extraordinary expenses which he must defray in paying the salaries of a skilful assistant, of a doorkeeper, who must attend during the day, and often all night, and during summer as well as winter, for washing, for fire day and night, and the very great and daily increasing expense of procuring human bodies and those of other animals, and for whisky, turpentine, &c. &c.

No demand whatever is made on students at Christmas.

Dr. Duncan junior states, that he receives from each student 4*s.* 6*d.*—2*s.* as formerly drawn by his predecessors for the ordinary expenses of servant, fire, and cleaning, and an additional 2*s* 6*d.* sanctioned by the Senatus to defray extraordinary expenses of laboratory and museum fires, and of gas for lighting the class-room, the purchase of articles of materia medica to form a collection, with boxes and glasses to contain and exhibit them, and the procuring of pharmaceutical apparatus. None of these expenses were incurred by any of his predecessors; and the sums received, it is believed do not indemnify the professor for his outlay, while the students derive the greatest benefit from its application.

As to gratuities said to be exacted by door-keepers, the Senatus report that the class servants have no authority for making any such demand, and that no complaints have ever reached any of the professors. Whatever gratuities are given must therefore be considered as purely voluntary.

(3.)—Letter from Carlyle Bell, Esq., Conjunct City Clerk, accompanying Report of College Committee regarding Small Fees.

City Chambers, 5th May, 1826.

5 May, 1826.

Sir,—I am directed by the magistrates and council to transmit to you, for the information of the principal and professors of the university, the copy herewith sent of a report by the College Committee on the reply by the Senatus Academicus to the requisition of the Patrons, dated the 21st of October last, and to request that there may be sent to me the statement mentioned at the conclusion of the report.

I am further directed to state to you that the magistrates and council expected ere this time to have been furnished with an account of the matriculation fund for last year, as noticed in the above mentioned communication of the 21st of October.—I am, Sir, your most obedient Servant.

Report by College Committee of the Town Council on the Small Fees collected by the Professors.

28th April, 1826.

28 April, 1826.

The College Committee, in terms of the remit from the council, have taken into consideration the reply by the Senatus Academicus to their communication of the 21st October, 1825. The council requested that a statement might be made to them of the amount of the small fees collected by each professor, along with the fees for tickets. The Committee regret that the information upon this subject, contained in the reply of the Senatus Academicus, is not so satisfactorily as could have been wished, as the members of that body have satisfied themselves with reporting, "that in general the small fees are the same, as to the personal knowledge of some members of the Senatus, that have been drawn for above half a century by professors, under the name of class-dues—dues namely for coals and class-servant, or door-keeper." And they have stated the amount of these dues in those cases only in which "alterations have been made more recently by some individual professors."

The attention of the Committee having been directed to the subject of the university fees in general, they consider it their duty to report to the council, that in their opinion it would be highly desirable that a schedule should be drawn up of the exact amount of the fees payable to each professor, in the name of fees for tickets and class-dues, and that such schedule should be exhibited in the university library and in the different class-rooms; and that a copy of it should be entered in the minutes of council, for the information of the public and of the patrons of the university.

If the council shall approve of this proposal, the Committee recommend that previously to the formation by them of the schedule, a communication shall be made to the Senatas Academicus, desiring that the council may be furnished, without loss of time, with a statement from each professor of the amount of the fees received by him in the name of fee for his class-ticket, and for his class-dues.

(Signed) John Bonar, Jun. *P.*

University of Edinburgh.

Appendix. Order VIII.

15 May, 1826.

(4.)—Answer of the Senatus Academicus to the Communication of the Honourable Patrons of the 5th May, 1826.

15*th May*, 1826.

The Senatus Academicus having considered the communication of the Honourable Patrons of the 5th instant, have to express their regret that the reply sent to the requisition of the Patrons of 21st October last, has not been considered as satisfactory, since it stated explicitly all the changes upon the small fees which had taken place during the incumbency of the present professors, and generally that no change had been made upon the others for at least half a century; and the Senatus trusted that in such a matter its averment would have been received as sufficient evidence of the fact.

The Senatus Academicus at the same time beg leave to express their surprise that a correspondence which originated in certain inquiries regarding the small fees, should have extended so as to include the class-fees long ago fixed and promulgated; and this for the avowed purpose of the formation by the Patrons of a general schedule to be entered in the minutes of council, and to be hung up, by their sole authority, as it would seem, in the library and class-rooms; a measure which could not fail to degrade the Senatus Academicus as a body, and the individual professors, in the estimation of the public, and of their students in particular.

The Senatus Academicus can have no objection to furnish, for the information of the Patrons, a statement of all the small fees, as soon as they can be exactly ascertained from each professor, whose returns have not been already specially made; nor can they have any objection to make a return of the joint matriculation and janitor fund, and its application; but they protest that their doing so shall not be held as recognising in the Patrons any exclusive authority in such matters; more especially as the nature and extent of the powers legally competent to them as such have been submitted to the determination of a court of law by the Honourable Patrons themselves; and before doing so they therefore beg to be informed, whether, upon receiving such returns, it is the intention of the Honourable Patrons to proceed, of their sole authority, to direct a schedule, such as is alluded to in the report of their committee, to be hung up in the library or elsewhere, as by their order.

(5.)—Report by the College Committee of the Town Council, relative to the Small Fees collected by the Professors.

7*th August*, 1826.

7 August, 1826.

The College Committee having taken into their consideration the extract from the minutes of the Senatus Academicus, of date the 15th May, transmitted to the council in answer to a communication from the Patrons of the 5th of the same month, on the subject of the fees charged by the professors for attendance on their lectures, and the small fees or class-dues which are paid by the students in addition: and have to report to the council, that in their opinion the Senatus Academicus have in some respects misunderstood the object of their last communication, which contained a request that the professors would individually state the amount of class-dues charged by them, and their application, and which request they would now recommend the council to repeat, as they have no means of accurately ascertaining these points, in so far as the return obtained from the Senatus is still incomplete.

Connected with the subject of small fees, the Patrons deemed it of importance that the public should be made aware of the class-fees of the university, and therefore suggested that a statement should be sent to them of the sum charged by each professor, and urged the propriety of a schedule being drawn up and placed in the library and class-rooms, containing the class-fee and dues of each professor, from which parents and guardians might form an estimate of the expense of the education of the youth under their care. The College Committee regard this as the more necessary, from the circumstance that reports have reached them of different payments being made by the students attending the same professor, which they think ought not to be continued, as the pupils of the same class should be on a perfect footing of equality, which they conceive the publication of the schedule would secure.

The College Committee are of opinion, that the Patrons, in making the request that the Senatus would furnish this statement, effectually prove that they have no intention whatever of interfering with any disputed point of right; and they would offer as a suggestion, that the schedule of fees, after having been submitted to the Council, be made public along with the advertisement of the classes for next session, which is signed by the Secretary of the University. Had the Patrons entertained any other intention, it would have been easy for them to have referred to their own record, and to have published the class-fees long ago fixed and promulgated, particularly those sanctioned by the council in October, 1812.

The College Committee are happy to find that the professors have never authorized the gratuities to the door-keepers on returning their tickets, and they are fully convinced of the propriety of a stop being put to such exactions, of which they personally have heard many complaints.

The College Committee have only further to recommend that the Senatus be requested to send to the council the return of the joint matriculation and janitor fund, under the reservation stated in the extract from the minutes of the Senatus.

(Signed) John Bonar, Jun., *P.*

(6.)—Answer by the Senatus Academicus to the Communication of the College Committee of the Town Council, of date 7th August, 1826.

29*th August*, 1826.

29 August, 1826.

The Senatus Academicus have considered the communication of the Honourable Patrons, of date the 7th August, relative to small fees, and the formation of a schedule of fees, to be published with the advertisement of the classes taught in the university.

The Senatus Academicus beg leave to state, that they never had any disinclination to give full information regarding the former; but, when they were called upon to specify their amount for the declared purpose of enabling the Honourable Patrons to proceed, of their own authority, to frame and publish a general schedule of fees, in a mode altogether unprecedented in this University, and during the pendency of a law-suit, upon questions of right, instituted by the Honourable Patrons themselves, they felt that they could not do so without some assurance, that their compliance was not to be made subservient to such purpose. And, as the last report of the College Committee, approved and transmitted by the Honourable Patrons, seems to disclaim that design, the Senatus Academicus can have no difficulty in proceeding to take the necessary measures for furnishing the Honourable

University of Edinburgh.

Appendix. Order VIII.

29 August, 1826.

Patrons with a detailed account of the fees in question. They have accordingly directed the secretary of the University to call upon each professor for a written statement of the amount and application of the small fee payable by the students attending his class over and above the usual class-fee, and to transmit the returns made by the several professors to the Honourable Patrons; but as the Honourable Patrons have allowed three months to pass without taking any notice of the last communication of the Senatus Academicus upon this subject, and have repeated their demand for further information at a period when, as they are well aware, many of the professors are absent from Edinburgh, some time may probably elapse before a complete return can be effected.

The Senatus Academicus have also directed that an account of the joint matriculation and janitor-fund shall be made out and transmitted to the Honourable Patrons, so soon as the treasurer, who is now in England, shall return.

With respect to the class-fees payable to the different professors, it has further been directed, that they shall be specified in the returns mentioning the small fees; but fully aware as the Honourable Patrons are of their amount, the Senatus Academicus cannot refrain from expressing their surprise that such returns should be demanded, professedly on the ground of a mere rumour, that different fees are exacted from the students attending the same class. That in certain classes, the fee payable by the students of divinity is by indulgence smaller than the general fee, is a well known fact; but of any difference founded on a demand of more than the legal fee, the Senatus are ignorant; and they must be pardoned for thinking, that the respectability of the professors of this University might exempt them from the necessity of animadverting upon insinuations of malversation in the matter of fees, founded upon vague or ignorant rumours.

It only remains to notice the suggestion, that the class-fees should be published, along with the advertisement of the classes for next session. Upon this point the Senatus Academicus have to observe, first, they believe the public is sufficiently informed of the amount of those fees; and next, that though such a practice may obtain in some private academies, they are not aware of its existence in any university. Having, however, no wish for concealment, but the contrary, they can have no objection to such an advertisement of fees, if directed by competent authority, as a general measure; and, as a Royal Commission for the Visitation of the Scottish Universities has just been issued, it will remain with those acting under that commission, to determine as to the propriety of such a measure, as well as to adjust the more important matters in discussion between the Honourable Patrons and this University.

(7.)—Returns from Professors referred to in the Answer of the Senatus Academicus of 29th August, relative to Class Fees and Small Dues.

11*th September*, 1826.

11 September, 1826. Divinity—By the Rev. Dr. Wm. Ritchie.—No return.

Divinity and Church History.

No fees paid by the students but three shillings for class-servant; and this not exacted from many, particularly those who enrol for the purpose of delivering discourses prescribed in preceding sessions.

(Signed) Hugh Meiklejohn.

Hebrew Class.

Fee, two guineas—Small fee, three shillings, paid over to the servant.

(Signed) Alex. Brunton.

Law of Scotland.

1. The fee is four guineas, without any variation of any kind, or to any class of students.

2. The only small fee is one of half-a-crown to the professor's clerk; a fee, I understand, of very old standing.

3. The porter who keeps the door of the class, and prevents noise or interruption during lecture, has no fee from the students, is not entitled to demand any, and so far as I know, never has For these two years I have, at great expense, provided a law library for my students, and had a servant in attendance from ten o'clock in the morning to two, and from five till eight in the evening, fire and lights being supplied; for which no fee nor exaction of any sort was either demanded, or, so far as I know, paid by the students. (Signed) Geo. Jos. Bell.

Civil Law Class.

In reference to the call made by the Patrons for a state of the fees taken by professors, and of the small fees to door-keepers, &c., I have to mention, that before the late rise in the professor's fees, those received by the Professor of Civil Law were three guineas for the course of lectures on the Institutes, and five guineas for that on the Pandects. These fees had been in use for a long period, as I know, from having paid them to Mr. Dick, when I attended his classes about forty years ago.

On the rise of fees taking place, that for the Institute class was increased to four guineas. No increase was made on that for the Pandect class; on the contrary, I have been ever since in the practice of accepting of four guineas, which is the fee naturally offered by the students; and this has now come to be so much understood as the settled one, that it has of late been the fee universally paid.

The fee for the door-keeper is five shillings in both classes, being the same which was paid in Mr. Dick's time, and of course has been in use for at least fifty years.

The whole is paid to John Wilson, who, in return, provides a person to keep the door during the hour that each class meets, cleans the class-room, and a retiring-room for the professor; keeps fires in both, and furnishes candles, which, in the class which meets from three to four in the afternoon, are necessary during a great part of the course.

The amount on an average has not exceeded ten pounds.

(Signed) Alex. Irving.

Class of Conveyancing.

The class fee is four guineas.

As the subject of *Small Fees* was under discussion previous to the time when I first commenced a course in the University (Nov. 1825), and as I was uncertain as to the proper rule and rate of charge for such fees as regarding my own class, I have not yet exacted, or received any such. I am charged three guineas for cleaning the class-room, and for fire, by the college janitor.

(Signed) Macvey Napier.

737

University of Edinburgh.

Appendix. Order VIII.

11 September, 1826.

Theory of Medicine—Fee 4*l.* 4*s.*

Small fee 2*s.* of which for upwards of thirty years I have paid 6*d.* to the Janitor of the University, and the remainder to the porter who stands at my class-room door.

(Signed) Andrew Duncan, Senior.

Practice of Physic—Fee 4*l.* 4*s.*

Small fee 2*s.* This last sum is hardly sufficient to pay the expense of a servant, fire, and other small necessary expenses. (Signed) James Home.

Chemistry—Class fee 4*l.* 4*s.*—Small class-due 4*s.* 6*d.*

The sum levied for at least half a century. (Signed) Thomas Charles Hope.

Materia Medica—Fee 4*l.* 4*s.*

The present Professsor of Materia Medica receives from each student 4*s.* 6*d.* Two shillings as formerly drawn by his predecessors for the ordinary expenses of servant, fire, and cleaning, and an additional 2*s.* 6*d.*, sanctioned by the Senatus, to defray extraordinary expenses of laboratory and museum fires, and of gas for lighting the class-room, the purchase of articles of materia medica to form a collection, with boxes and glasses to contain and exhibit them, and the procuring of pharmaceutical apparatus. None of these expenses were incurred by any of his predecessors, and the sums received, it is believed, do not indemnify the professor for his outlay, while the students derive the greatest benefit from its application. (Signed) Andrew Duncan, Junior.

Anatomy.

For a number of years past 6*s.* have been charged by the Professor of Anatomy and Surgery to meet a very small part of the extraordinary expenses which he must defray, in paying the salaries of a skilful assistant, of a door-keeper, who must attend during the day, and often all night, and during summer as well as winter, for washing, for fire, day and night, and the very great and daily increasing expense of procuring human bodies, and those of other animals, and for whisky, turpentine, &c.

No demand whatever is made on students at Christmas.

Botany—Fee, 4*l.* 4*s.*

I receive from each of the pupils of botany 5*s.*, which I pay over entirely to the gardener. Dr. Rutherford exacted 2*s.* 6*d.* from each. I raised the amount, as it seemed much too small for a most deserving man, whose labour is extended over the whole year, not confined to the time when the class meets. This, I am now satisfied, was an irregularity, but I hope the circumstances will justify the measure. (Signed) Robert Graham.

Clinical Lectures.

For the winter Clinical Course the fee is 4*l.* 6*s.*, and for the summer Clinical Course it is 3*l.* 5*s.* The 2*s.* in these cases is taken to cover the expenses of heating, lighting, and cleansing the class-room, and of the servants' wages.

Midwifery.

No small fees have ever been charged by the Professor of Midwifery in the University of Edinburgh.

The class-fees exacted by Dr. Young, the first professor, were three guineas for the first attendance on a course of his lectures; two guineas for the second attendance; and one guinea for the third; after which the pupil was allowed to attend gratis.

These fees were continued till November, 1812, when, agreeably to the permission granted by the Honourable Patrons, they were raised to four guineas for the first course; three for the second; and two for the third. But I have invariably exempted all students who attended previously to 1812, from the additional fees, that is, all students who had attended the midwifery class of this university, whether taught by Dr. Young or by Dr. Alexander Hamilton, for a single course previous to 1812, were entitled to attend my lectures, for two guineas; and those who had attended two courses, for one guinea; so that it has repeatedly happened within these few years that gentleman have attended my lectures for a whole winter for a single guinea.

(Signed) James Hamilton, Junior.

Clinical Surgery.

For a class ticket	£3 3 0
To the door-keeper	0 1 0
Total . .	£3 4 0

(Signed) James Russell.

Military Surgery—Class fees, 3*l.* 3*s.*—No small fees.

(Signed) George Ballingall.

Medical Jurisprudence—Fee 3*l.* 3*s.*—Small fee, 3*s.*

According to the act of Council in 1812, regulating the fees of professors, I am entitled to charge four guineas, but I have hitherto charged three only, because neither my predecessors, Dr. Duncan, Junior, and Dr. Alison, took advantage of the augmentation. The small fee, even though the class were more numerously attended than now, is more than expended on apparatus and experiments.

(Signed) R. Christison.

Humanity Classes—No return.

Greek Classes—1st, or public class—Fees, 3*l.* 3*s.*—Class dues, 5*s.*

2nd, or private class—Fees, 3*l.* 3*s.*—Class dues, 5*s.*

3rd, or private class—The class-dues of 5*s.* only demanded of those who had previously attended the first and second classes.

The fee to such as had attended the second class only, is 3*l.* 3*s.*, and the class-dues 5*s.* To such as had not attended the first and second classes, but had at once joined the third, the fee is 4*l.* 4*s.*; because, previously to the fixing of the fees in 1812, the fee of that class, to such as passed over the first and second, was always 3*l.* 3*s.*, and the class-dues 5*s.* It must be understood that the business of the third class is totally distinct from the other two.

The class-dues go for the payment of a servant, who attends four hours, and sometimes more, each day; for coals and other charges, such as cleaning the class-room, &c. They have never been

University of Edinburgh.

Appendix. Order VIII.

altered in my time, but have been the same in the literary classes, I believe, for more than half a century.

I should have added, that when any gentleman enters the third class, without having attended the other two, and declares that he is to attend it for *two sessions*, the fee is only 3*l.* 3*s.*

(Signed) GEORGE DUNBAR.

11 September, 1826.

MATHEMATICAL CLASSES.

I receive 4*l.* 4*s.* from general students, and 3*l.* 3*s.* from students of divinity; and I charge 5*s.* in addition, to defray the expenses of keeping a janitor three hours in the day to attend my three classes, and the expense of fire, &c.

The above fees, I understood, when I was elected to the professorship, were paid to my predecessor in the chair; and my commission empowers me to receive all the emoluments which had been enjoyed by my predecessors. (Signed) WILLIAM WALLACE.

LOGIC—Fee, 3*l.* 3*s*—Small Fee, 5*s.*

(Signed) DAVID RITCHIE.

MORAL PHILOSOPHY—Fee, 4*l.* 4*s.*—Small fee, 5*s.*

On my appointment to the Chair, I was informed that my predecessor had made the fee three guineas only to students in divinity, and I have followed his example.

(Signed) JOHN WILSON.

NATURAL PHILOSOPHY.

It has been a practice, of at least more than fifty years standing in this College, for the door-keeper of each class to expect a gratuity of two or three shillings on delivering back the tickets after Christmas; but, in the more advanced classes there has been some reluctance betrayed, particularly by the richer students, to a compliance with that custom, and many of the tickets left uncalled for, though never refused. I therefore resolved last session to put an end to this irregularity, and avoid every cause of incidental jarring; I abolished the Christmas gratuity in my class, and added 15*l.* to the wages of my servant. But I conceived myself warranted by the example of Dr. Copland at Aberdeen, and the late Dr. Black here, to exact the small fee of three shillings on each ticket, as some compensation for the expense incurred by showing numerous experiments. It is after all very inadequate. My operator costs me 30*l.* more than in the time of my predecessors; and I likewise incur a good deal of expense in waste and breakage of glass, &c. I have never heard a murmur from any of my students for this slight assessment, and have always understood that, in smaller matters, every Professor, both in this and in other Universities, is left to his own discretion and responsibility. If it were otherwise, the Professor of Experimental Philosophy would be placed in a very different situation from a Professor of Logic, or Rhetoric, or Ethics, who needs no operator, and incurs no expense but a few scraps of paper. (Signed) JOHN LESLIE.

(8.)—Report by the College Committee of the Town Council relative to the Class Fees and Small Dues.

5th September, 1826.

5 September, 1826.

In terms of the remit from the council, as patrons and guardians of the University, the College Committee have maturely considered the communication from the Senatus Academicus of the 30th ult. containing an extract from the minutes of a meeting of that body, held upon the 29th August, 1826, relative to the small fees and class fees collected by the professors, and to the joint matriculation and janitor's fund.

The Committee feel themselves called upon, from the nature of this communication, to offer some remarks to the council upon each of these subjects. In regard to the small fees, the Committee observe, with equal regret and astonishment, that the professors had been induced to think it necessary, before giving a detailed statement of the fees in question (in place of the imperfect account which they had furnished in October, 1825), to receive some assurance that their compliance was not to be made subservient to the purpose of a law-suit at present pending between them and their patrons; it having been distinctly stated by the council in their communication to the Senatus Academicus, as far back as the 21st October, 1825, "That when they had lately under their consideration two accounts of considerable amount claimed by John Wilson, the janitor, the greater part of which was for cleaning the different class-rooms of the college, their attention was called to the fact of certain small fees, varying in amount, being collected by the professors from the students, along with the stated fees for tickets; when the council resolved that a request be made to the Senatus Academicus for a statement showing the amount of such fees taken by each professor, and to what use applied."

It was upon these grounds that the request was made for information upon the subject, and without the smallest reference to any law proceedings.

The Committee are happy to find that the necessary measures have been at last taken for furnishing to the patrons and guardians of the University a detailed account of the fees in question, which they trust will be forwarded without any unnecessary delay. When the council shall have had an opportunity of considering this Report, they will be enabled to judge of the propriety of payments being continued to the janitor for cleaning the class-rooms of the college, or whether this expense should be defrayed from the fund collected by the professors in name of class-dues.

In regard to the joint matriculation and janitor's fund, the council will recollect that when that matter was brought under their consideration in October, 1825, in consequence of the death of Mr. Fyfe, the upper janitor, they gave their sanction to the continuation of the matriculation fee at ten shillings from each student, after having examined into the receipts and expenditure of the fund for a

739

University of Edinburgh.

Appendix. Order VIII.

series of years; and they then stipulated that the Senatus Academicus should transmit to them, at the term of Candlemas in each year, a detailed account of the fund. This has not been received, but the committee are happy to find that it may be soon expected; and they beg leave to suggest the propriety of this statement being transmitted annually at the stated time.

With respect to the class-fees a return was desired by the patrons of the college from each professor, of the whole amount of fees received by him from each student, in the name of fee for his class-ticket and for class dues. This return was required with the view of some means being adopted for giving publicity to them—"that parents and guardians might be enabled to form an estimate of the expense of the education of youth under their care." The Committee know that the public is not sufficiently informed of the amount of these fees, and the information can at present be obtained only by application to each individual professor. It was originally suggested by the council that a schedule of fees payable to the different professors, in the name of class-fees and class-dues, should be formed and hung up in the library and in the different class-rooms of the college; and to such a plan, of the necessity and propriety of which the Committee are completely satisfied, they can see no possible objection, nor do they think it a matter of any moment under whose authority the schedule is exhibited, provided its accuracy has been previously ascertained by a reference to the books of the council, in which is recorded the amount of the class-fees sanctioned by that body.

5 September, 1826.

The Committee stated, in their report to the council of the 7th August, that they regarded it as the more necessary that publicity should be given to the legal rate of fees exigible from the students, "from the circumstance that reports had reached them of different payments being made by the students attending the same professor, which they think ought not to be continued, as the pupils of the same class should be on a perfect footing of equality." In making this statement, the committee had no intention of referring to a different rate of payment in consequence of indulgence shown to the students of divinity in certain classes, by a fee smaller than the general one being taken from them; but it was founded upon information received from what they believe to be unquestionable authority.

The committee think it their duty to report to the council that they are informed that, in some of the classes of languages and of philosophy, fees are in general *received* (whether *demanded* or not, is not in their knowledge) higher than those sanctioned by the last regulation of the patrons. That the patrons may be exactly aware of the amount of fees payable to the different professors, the committee beg to refer to a memorial presented to the council in the year 1812 by the professors, praying for an increase of their class-fees. It is there distinctly stated that "the fees of the professors have not for a long period been augmented; the Senatus Academicus humbly conceive that they should receive an augmentation at present. The classes of languages and of philosophy have for a long series of years continued stationary at two guineas of fee; and the medical classes, ever since their institution near a century ago, at three guineas." The following has occurred to the memorialists as equitable,—namely, "That those professors who at present draw the fee of two guineas, should be authorized to draw three guineas; and those who at present draw a fee of three guineas, should be authorized to draw a fee of four guineas." The deliverance of the council was in the following terms:—"The lord provost, magistrates, and council, patrons of the University, having considered what is stated in the foregoing memorial, and being satisfied that the augmentation to the fees of the professors, proposed by the Senatus Academicus, is, under existing circumstances, a fair and proper addition, they do hereby approve of and sanction the proposal, and authorize the professors who at present draw a fee of two guineas, to exact a fee of three guineas, and those who at present draw a fee of three, to exact a fee of four guineas."

The council will observe, by the statement in the memorial of the Senaticus Academicus, that previously to October, 1812, there were two distinct rates of class-fees payable to the different professors, namely, two guineas to the professors of languages and philosophy, and three guineas to the professors of medicine. In consequence of the council having given their sanction to the augmentation proposed by the Sen· ticus Academicus, the professors of languages and philosophy, who were formerly entitled to receive two guineas, became entitled to exact three, and the professors of medicine alone, who had formerly been entitled to draw three, to exact four.

The Committee, however, have good grounds for believing that, in some of the classes of philosophy and languages, the fee of four guineas is generally received, although they are not prepared to say that that sum is demanded. Under such circumstances, it appears to the committee essentially necessary that no room should be left for doubt as to the exact amount of fee exigible by the different professors; but that the public should have an opportunity of ascertaining the fact by reference to a schedule publicly exhibited in the college. The committee strongly recommend, therefore, that some arrangement should be made by which such schedule may be exhibited as soon as the council have received the promised return from the professors, and have ascertained its accuracy by a reference to their records. There does not appear to the committee any reason to doubt that some means of attaining this object may be devised by the Patrons, in conjunction with the Senatus Academicus, without the rights of either party being in the slightest degree compromised by the act; a measure, in the opinion of the Committee, necessary for the information of the public, and for the respectability of the University.

(Signed) John Bonar, Jun., *P.*

(9.)—Reply of the Senatus Academicus to the Communication of the Honourable Patrons, dated 5th December, 1826.

College of Edinburgh, 26*th September*, 1826.

The Senatus Academicus have the honour to acknowledge the receipt of a communication from the Honourable Patrons of the university, of date the 5th of September, 1826; and from the nature of that communication, they feel themselves called upon to offer a few remarks upon it.

26 September, 1826.

In all their intercourse with the Patrons of the university, it has never, till the present period, been their painful task to notice insinuations of something like extortion practised upon the public by some of the professors. They might have expected, that if there were any deviations from established usage, they would have been pointed out to them, and that they would have been left, as they hitherto have been, to the exercise of their own discretion in rectifying or removing them.

It would seem, from a reference to a communication made by the council to the Senatus Academicus, of date the 21st October, 1825, that it was thought proper to call upon the professors to give an

account of the *class-dues*, because the janitor's charges against the town for cleaning the class-rooms, and for general superintendence of the college-buildings, amounted to a considerable sum. The Senatus beg leave to say that they are not the auditors of John Wilson's accounts, neither are these accounts submitted to their inspection; and if, therefore, they appeared to include charges about which there could be any doubt, the direct course was for the patrons to examine the janitor himself; and, in fact, it appears that the janitor's accounts for the two years preceding 1825 were submitted to a committee of the town-council, and himself examined before them, and that each of these accounts, though to fully as great an amount as the last, were passed by them and discharged. The Senatus beg leave to remark that a very small portion of John Wilson's charge could have any reference to cleaning the different class-room, because the greatest part of the expense which the janitor incurs consists in hiring servants to clean the public rooms, corridors, and staircases, and to keep the whole of the public buildings in proper order. They judge it proper to observe, that one or two of the professors, in their returns respecting the class-dues, have stated that they were partly applied to the cleaning of the class-rooms. It has been since found that the sum paid to John Wilson is for firing only.

The Senatus are next called upon to advert to the reasons assigned for requiring a statement of the amount of the fee demanded from each student, viz.—"That parents and guardians might be enabled to form an estimate of the expense of the education of youth under their care." It would appear that the Patrons have discovered, after a lapse of 14 years, something wrong in the conduct of certain professors in demanding a higher fee than they were entitled to, conformable to the memorial of the Senatus Academicus in 1812. In that memorial, no doubt, the fee of the language and philosophical classes is stated to have been *two guineas*. From inadvertence, the words *some of* have been omitted, because in *some of* the philosophical classes the fee of *three guineas* was, previous to 1812, regularly demanded and paid; and this fact is perfectly well known to all the members who were in the university at that period. But as far as is known to the Senatus Academicus, no legal fee was ever fixed, either by the patrons or the university, or any of the classes in the college. What was paid by the students was considered a *honorarium*, and known by that name. It was at first a gratuity by the public, and therefore could not be fixed by any enactments. In this university, the fee paid by students previous to 1812, proceeded upon a general feeling of what was right and proper to be paid to the professors, according to the circumstances of the times, and what was considered due to their situation. Even in the language and logic classes, before the period just mentioned, nearly the one half of the students paid *three guineas;* and it was owing to the circumstances of a considerable number not admitting, at that time, of the same gradual rise of the fee, as in other classes, that the regular honorarium was judged to be two guineas. In the law classes, also, of which no mention is made in the memorial, the fee, previous to 1812, was always *three guineas*, and in one of the civil law courses it was *five guineas*. The inaccuracy in the memorial cannot, in a fair and liberal view, form any ground of challenge, because, in the act of council, of date the 24th October, 1812, "The lord provost, magistrates, and town-council authorize the professors who at present draw a fee of two guineas to exact a fee of three guineas, and those who at present draw three to exact a fee of four guineas." This act of the town-council was put in immediate operation. The professors of those classes who had been in the use of receiving three guineas, did, at the commencement of the session, demand four guineas from the students that entered their respective classes, and no challenge was made by the Patrons at the time; which assuredly would have been done had they imagined that those professors demanded more than they were entitled to by the act.

The Patrons of the university seem to think it necessary that the students should be made acquainted with the amount of the fees payable in each class, *by means of schedules being hung up in the library and in the different class-rooms*. This is a measure that might, perhaps, have been thought expedient at the time when the fees were raised, but cannot, even if it were not highly derogatory to the honour and respectability of the university, be judged necessary after the lapse of so many years, during which the amount of the fees has become generally known, and, as far as the Senatus can judge, cheerfully acquiesced in. Such a measure was never resorted to in any other university of Scotland, and never proposed in this till the present period. If, however, the royal commissioners, to whom these papers are to be submitted, shall think this a proper measure for all the universities in Scotland, the university will cheerfully acquiesce in it.

The Senatus have still a few observations to make regarding the joint matriculation and janitor's fund, of the appropriation of which the Honourable Patrons have, for the first time, demanded an annual statement. This appears to have arisen from the supposition, that when the annuity of Mr. Fyfe ceased, the matriculation fee might be reduced. This was certainly not the understanding of the magistrates and the Senatus when the arrangement with Mr. Fyfe was made. The Honourable Patrons are probably not aware, that in an act of council, of date the 22nd February, 1815, it is stated, "that Mr. Fyfe's salary of 110*l.*, which is now paid out of the matriculation fees, will then (*at his death*) fall into the general library fund *at the disposal of the curators*." The Senatus have to regret, that when they imagine they are *bona fide* following out the instructions of former acts of council, they are met by new inquiries into matters that were understood to have been already arranged. The Senatus beg leave to state, that the charge of the library to the curators is attended with great trouble and no emolument; that the professors have become personally responsible for large sums to prevent it from falling into inevitable ruin, and to put it on a respectable footing; and that, instead of being subjected to new regulations entailing additional labours, they might have expected a liberal testimony of confidence for their unpaid services. They have no disposition, however, to fail in their promise to the Patrons of furnishing them annually with a statement of the appropriation of the library funds.

In conclusion, the Senatus assure the Honourable Patrons, that they are unconscious of having, in any respect, stepped beyond the line of their duty,—of having trespassed upon established usage, or of having contravened the act of council of 1812, as applicable to the fees of the different professors. Deploring, as they do, the differences that have of late arisen between them and the Honourable Patrons, their most ardent wish is that they may be soon terminated to the satisfaction, if possible, of both parties, and the honour and respectability of that establishment which they are both bound to strengthen and uphold.

Extracted from the minutes,

ANDREW DUNCAN, Jun. *Sec.*

University of Edinburgh.

Appendix. Order VIII.

(10.)—Copy Act of Council authorizing the Increase of the Professors' Class Fee.

21 October, 1812.

At Edinburgh, the twenty-first day of October, in the year one thousand eight hundred and twelve;—

Which day the magistrates and council of the city of Edinburgh being assembled, there was presented a Memorial from the Senatus Academicus of the University of Edinburgh, which was read, and which was of the following tenor:—"*College, October* 19, 1812.—MEMORIAL by the Senatus Academicus to the Right Honourable the Lord Provost, the magistrates and council, Patrons of the university.—The importance of the university to the interests of the metropolis, from the large and increasing number of the youth, which it annually attracts to the city, is obvious. Its claims on this ground to the countenance of the Honourable Patrons has at all times been recognised by them, and the Senatus Academicus gratefully acknowledge that they have felt that countenance liberally afforded. Under this impression the memorialists respectfully state the following case to the consideration of the town-council, in the strong hope that it will receive their approbation and support. The fees of the professors have not for a long period been augmented. The Senatus Academicus humbly conceive that they should receive an augmentation at present. The classes of Languages and Philosophy have, for a great series of years, continued stationary at two guineas a fee, and the medical classes, ever since their institution, near a century ago, at three guineas. These sums, it is apprehended by the memorialists, are extremely inadequate. They appear to be so, whether they consider the dignity of the university as a great national seminary, or the long previous study and the extensive attainments required to qualify professors for the difficult duties of its chairs. It is well known that the leading schoolmasters in the city, who merely initiate pupils in the reading of English, are more amply remunerated for the children who attend them. Since the university fees were established at their present rate, the price of not only every necessary of life, but of all kinds of labour, whether of body or mind, have, without exception, been remarkably raised. In the department of education, in particular, there is no branch, the price of which has not been doubled, tripled, or even quadrupled. The members of the university, therefore, only request that their services may be placed, as to increasing recompense, on a similar footing with those of every class, mechanical, commercial, and literary, in the community. They are more strongly encouraged to trust, that their application will on this ground appear reasonable to their Honourable Patrons, as the Patrons, from the principle now stated, it is believed, have lately been pleased to raise the fees of the masters of the High School to a sum rather more than double of their former amount. The augmentation which the memorialists would respectfully suggest is not in proportion as high as that to which they have now alluded. The following has occurred to them as equitable, namely—that those professors who at present draw a fee of two guineas should be authorized to draw three guineas, and that those who at present draw a fee of three guineas should be authorized to draw four guineas. In support of this proposed augmentation, the memorialists have simply to subjoin further, that from occasional intercourse with the students, they have reason to believe that some considerable rise in the fees of the professors has been of late very generally anticipated, from such views of the matter as the students themselves had been led to take; and the memorialists, therefore, are persuaded that the augmentation will be considered by them as neither an unfair nor oppressive exaction. The Honourable Patrons may be assured that this bearing of the case now mentioned has not escaped the memorialists' serious and deliberate attention, and they feel no dread that any injurious effect to either the prosperity of the university, or to their own individual interest, would result from the moderate augmentation which they had suggested.

"May it therefore please the Honourable Patrons to sanction by their authority the augmentation above specified, and if consistent with their forms of procedure, to give that sanction at their earliest meeting, as some of the classes open for the ensuing session on Thursday next; or if it shall seem meet to their wisdom to appoint a committee for the consideration of the case, May it please the Honourable Patrons to authorize that committee to receive from a committee of the Senatus Academicus, which has been nominated in reference to the subject, such a communication as may be ready to be laid before them; and further, to confer on the committee full powers for settling finally the powers in question—a proposition which the memorialists presume to make from their recollection, that a committee, invested with such powers, was lately nominated by the Honourable Patrons, and that several useful and beneficial consequences have been derived to the university, both respecting the regulations for the library, and the fees of matriculation, from what was done by that committee. In name and by authority of the Senatus Academicus.

(Signed) "GEORGE H. BAIRD, *Principal.*"

The lord provost, magistrates, and council, having considered what is stated in this memorial, and being satisfied that the augmentation to the fees of the professors proposed by the Senatus Academicus is, under existing circumstances, a fair and proper addition, they do hereby approve of and sanction the proposal, and authorize those professors who at present draw a fee of two guineas to exact a fee of three guineas, and those who at present draw a fee of three guineas to exact a fee of four guineas, such addition to commence with the present session of the college: and grant authority to the clerk to extract this act without abiding or reading, and transmit the same to the Principal for the information of the Senatus Academicus.

(Signed) WILLIAM CREECH, *Provost.*

Return by the Town Council.

Report transmitted by the Town Council, with reference to No. 8 *of Appendix of Returns by the University of Edinburgh, in regard to Class Fees.*

Edinburgh, 9th October, 1826.

9 October, 1826.

In terms of the remit from the council, as patrons and guardians of the university, the Committee have naturally considered the communications from the Senatus Academicus, of date the 12th and 26th of September.

The communication of the 12th September, the Committee are happy to find, contains an account of the amount of fees payable to the different professors, in the name of *class-fees*, and of *small-fees*, or *class-dues*. A return is made by all the professors who are at present in Edinburgh, but it is still deficient in regard to three of them who are absent from home. In most instances the professors have complied with the request of the Patrons, in stating both the amount of the class-dues, and the pur-

University of Edinburgh.

Appendix. Order VIII.

9 October, 1826.

poses to which they are applied; in several cases, however they have satisfied themselves with stating the amount, without giving any account of their application.

The communication of the 26th September contains remarks in answer to that of the Patrons of the 6th, upon the subject of the *small-fees* or *class-dues*, the *class-fees* and the *joint matriculation* and *janitors fund*. As it has been the wish of the Patrons of the university, in all their intercourse with the principal and professors, to avoid giving rise to any unnecessary irritation, the Committee will refrain from making such animadversions upon this communication, as its style and manner might be supposed to demand. They think it their duty, however, for the information of the council, to make some remarks upon each of the subjects to which it refers.

Small Fees or Class Dues.

The Committee beg leave to remind the council, that their attention was first attracted to this subject when they had under their consideration two accounts of considerable amount, claimed by John Wilson, the janitor, in addition to the salary allowed him out of the joint matriculation and janitor's fund, a part of which was for cleaning the class-rooms of the different professors in the college. The committee examined the janitor in regard to these accounts, and were informed by him that a considerable part of the sum demanded was for the purpose of keeping clean the class-rooms, as well as the public rooms. It was thought right, upon this occasion, to require information from the professors, as to the amount and application of certain small sums of money drawn by them, along with the ordinary class-fees, in the name of small-fees or class-dues. One object of this inquiry was to ascertain whether or not money was advanced, both from the hands of the city, and from the dues paid by the students to the professors, for the same purpose of cleaning the class-rooms. It was distinctly stated to the Senatus Academicus, that "the magistrates and council were the more induced to come to this resolution" (of making the inquiry) "from the circumstance of having been informed, that the door-keepers of the different class-rooms exact gratuities from the students on returning their tickets, a practice which the council think ought to be immediately done away; and from the consideration that the medical students will be now subjected to an additional expense on account of their being obliged to attend the midwifery class, &c.

From the returns now made, it appears that in three of the classes no class-dues have been exacted, that in others, a sum of money, varying in different instances from one to six shillings, has been collected from the students by the professors under the name of class-dues. From the reports of the individual professors, in regard to the purposes to which these dues are applied, it appears that in some instances part of them has been paid to John Wilson, the janitor, for cleaning the class-rooms; it is proper here to remark, however, that in the communication from the Senatus Academicus of the 26th, it is said, "they judge it proper to observe, that one or two of the professors, in their returns respecting the class-dues, have stated that they were partly applied to the cleaning of the class-rooms. It has been since found that the sum paid to John Wilson is for firing only."

The Committee have to report to the council their opinion that some proper regulations should be adopted upon this subject, as at present it is not easy to discover any satisfactory principle upon which the amount of the class-dues has been fixed, nor does it seem to be distinctly understood to what purposes they are meant to be applied. The Committee are well aware that from a difference of circumstances in regard to the modes in which the different classes require to be taught, a variety in the amount of the class-dues ought to be allowed; but this, the Committee are of opinion, ought not to be left to the discretion of the individual professors, but should be regulated, as well as the class-fees, upon some fixed principle. Under the present practice it appears to the Committee that the class-dues are higher in some of the classes in which the expenses of the class are less than in those in which they must of necessity be considerably greater. The Committee do not anticipate any difficulty in the arrangement of this matter by the Patrons, with the advice and assistance of the Senatus Academicus.

Gratuities to Servants.

In answer to the statement of the council upon this subject, it is said, in the communication of the Senatus Academicus of the 21st October, 1825, "that the class servants have no authority for making any such demands, and that no complaints from the students have ever reached any of the professors; whatever gratuities are given must therefore be considered as purely voluntary." It is satisfactory to find that the practice of gratuities being exacted by the class servants has received no sanction from the professors. It is matter of notoriety, however, that such gratuities have been very generally paid by the students, by whom it is well known many complaints have been made, though for very obvious reasons these were not likely to be carried directly to the professors. If any proof were required of the existence of the practice, in addition to the evidence of some members of the Committee, it is to be found in a communication of the Senatus Academicus of the 21st October, 1825, in which it is stated by Professor Leslie, "that it has been a practice of at least more than fifty years standing in this college, for the doorkeeper of each class to expect a gratuity of two or three shillings on delivering back the tickets after Christmas." The Committee are decidedly of opinion that all such gratuities should be abolished, and if it should be thought proper that any payment be made by the students to the doorkeeper of the class-rooms of the professors, it should be taken from the fund collected in the name of class-dues. It may be remarked, that the sum of money required for firing must be very inconsiderable in many of the classes, in which the class-room is occupied by the students one hour only in the day during the session.

Class Fees.

In April, 1826, when the matter of the class-dues was under consideration, in a conversation which took place in the College Committee upon the subject of the university fees in general, it appeared that neither the members of the Committee, nor the public, had any knowledge of the exact amount of fees received by each professor; the Committee thought it their duty, therefore, to report to the council their opinion, "that it would be highly desirable that a schedule should be drawn up of the exact amount of the fees payable to each professor in the name of fees for tickets and for class-dues; and that such schedules should be exhibited in the university library, and in the different class-rooms, and that a copy of it should be entered in the minutes of council for the information of the public, and of the Patrons of the university." The council approving of the proposal, requested, in a communication to the Senatus Academicus of date 3rd May, 1826, "that they might be furnished without loss of time with a statement from each professor, of the amount of fees received by him in the name of fee for his class-ticket, and for his class-dues."

743

University of Edinburgh.

Appendix. Order VIII.

9 October, 1826.

From a variety of causes, for which the Committee beg leave to refer to the correspondence which has taken place between the council and the Senatus Academicus, the statement required has only now been furnished. It was distinctly stated by the council, in their correspondence with the Senatus Academicus, "that the Patrons deemed it of importance that the public should be made aware of the class-fees of the university, by means of a schedule publicly exhibited, that parents and guardians might form an estimate of the expense and education of the youth under their care," being convinced that the public was not sufficiently informed of the amount of these fees, and that the information could he obtained only by application to each individual professor.

It was thought more essentially necessary that a statement should be made to the patrons of the university, of the amount of fees received by the professors, as in the course of the inquiry of the Committee, they had found reason to believe "that different payments had been made by the students attending the same professor;" and also from having learned, "that in some of the classes of language and philosophy, fees were in general *received* (whether *demanded* or not is not in their knowledge), higher than those sanctioned by the last regulation of the patrons."

Upon this last subject the present Committee feel it to be their duty to make some remarks.

In the memorial of the Senatus Academicus to the council, dated the 19th October, 1812, it is stated, that "the fees of the professors have not for a long period been augmented. The Senatus Academicus humbly conceive that they should receive an augmentation at present. The classes of languages and philosophy have, for a great series of years, continued stationary at two guineas of fee; and the medical classes, ever since their institution, near a century ago, at three guineas. These sums, it is apprehended by the memorialists, are extremely inadequate." In consequence of this opinion of the inadequacy of the fees, of which there were, by the statement of the memorial, two distinct rates, payable to the different professors, viz., two guineas to the professors of languages and philosophy, and three guineas to the professors of medicine, the Senatus suggested the propriety of an augmentation in the following terms:—"The following has occurred to the memorialists as equitable, namely, that those professors who at present draw the fee of two guineas should be authorized to draw three guineas; and those who at present draw a fee of three guineas should be authorized to draw a fee of four guineas;" and they conclude with requesting "the Honourable Patrons to sanction by their authority the augmentation above specified; and if consistent with their forms of procedure to give that sanction at their earliest meeting, as some of the classes open for the ensuing session on Thursday next."

The memorial, which was dated the 19th of October, was taken into consideration upon the 21st, by the lord provost, magistrates, and council, who, in all probability, in consequence of the application of the Senatus Academicus for an early decision, came to a resolution upon the subject on that day, without having, as has generally been the case on occasions of such importance, remitted the memorial to a committee for mature and deliberate consideration. The deliverance is in the following terms:—"The lord provost, magistrates, and council, patrons of the university, having considered what is stated in the foregoing memorial, and being satisfied that the augmentation to the fees of the professors, proposed by the Senatus Academicus, is, under existing circumstances, a fair and proper addition, they do hereby approve of and sanction the proposal, and authorize the professors, who at present draw a fee of two guineas, to exact a fee of three guineas; and those who at present draw three, to exact a fee of four guineas; such additions to commence with the present session of the college; and grant authority to the clerks to extract this act without abiding a reading, and transmit the same to the principal for the information of the Senatus Academicus."

Notwithstanding the arrangement here proposed by the Senatus Acdemicus, and sanctioned by the Patrons, by which it is perfectly evident that the professors of languages and philosophy were to become entitled to exact from the students a fee of three guineas instead of two, it appears by the present statement of the Senatus Academicus that several of these professors have been in the habit of regularly exacting a fee of four guineas. The Committee beg particularly to request the attention of the council to the explanation of this fact, given in the communication from the Senatus Academicus of the 26th ult. They say,—"In that memorial, no doubt, the fee of the language and philosophical classes is stated to have been *two guineas*. From inadvertence, the words *some of* had been omitted, because in *some of* the philosophical classes the fee of *three guineas* was, previous to 1812, regularly demanded and paid; and this fact is perfectly well known to all the members who were in the university at that period."

It certainly does strike the Committee as being a most remarkable circumstance, and one to which they could with difficulty have given credence, were it not stated, on the authority of the professors of the university, that in a business of so much importance to the interests of the professors and of public, as the one under consideration, in which it was the intention of the professors to show the inadequacy of the fees payable at that time, and upon that ground to apply for an augmentation, the memorial should have been drawn up with so much inaccuracy and carelessness, as by the omission of two words of the greatest importance, to have conveyed to the patrons of the university, a perfectly erroneous impression in regard to the actual state of the facts. In adopting *the words of the prayer of the petition*, which the Patrons did, they must have been perfectly satisfied that they were giving their sanction to the proposed increase in distinct reference *to the preamble*. The Committee have thought it their duty to refer to the *original memorial* of the Senatus Academicus, from which it appears that the inadvertence must have occurred entirely on the part of the professors, as in it, it is distinctly stated that "*the classes* of language and philosophy," (not *some of* the classes) "have for a great series of years continued stationary at two guineas of fee." Had it been stated to the Patrons that the fees of *some of* the classes of languages and philosophy were two guineas, and of others three, they would have felt it to have been their duty to consider upon what grounds such a difference had existed, and whether there was any propriety in its being continued; and though they might have been induced readily to grant their sanction to an increase of the fee of two guineas to three, it might have been matter of more serious consideration, whether they would have sanctioned the proposed rise in regard to those classes in which three guineas was already received as the fee.

It is further stated by the Senatus Academicus, that "as far as is known to the Senatus Academicus, no legal fee was ever fixed either by the patrons or the university for any of the classes in the college. What was paid by the students was considered a *honorarium*, and known by that name." This allegation of the fees paid previously to 1812 having been a *honorarium*, appears somewhat inconsistent with the statement above quoted from the same communication of the Senatus, "that in some of the philosophical classes the fee of three guineas was, previous to 1812, *regularly demanded* and paid."

The magistrates and council, however, have it in their power to inform the Senatus Academicus,

University of Edinburgh.

Appendix. Order VIII.

9 October, 1826.

that at so early a period as 14th November, 1595, the Patrons did actually fix a rate of fees to be paid by the students attending the different classes of the college, by an act of council, an excerpt of which is in the following terms:—"Anent the dewties to be tayne be the Regents of yair Scholers, in respect of the derth, and that the Counsall fynds nocht guid to augment yair stipends: Thairfore ordains yame to tak and haif of Gentlemen's Sones, quha are nocht Burgesses of this Burgh, the sum of aucht pund ilk persone, and of Burges Sons, in this Burgh, four pund ilk persone, to be payit quarterlie."

But supposing it had been the fact that previously to 1812 the payment made to the professors by the students was an *honorarium*, it seems rather singular that it should have been so distinctly stated by the professors in their memorial of 1812, that "the classes of languages and philosophy have for a great series of years *continued stationary* at two guineas of fee," as if this had been an amount of fee regularly fixed and determined. And it is to be regretted the more upon account of the payment having been previously an honorary one, that an erroneous statement should have been made through "*inadvertence*," at the moment when it was proposed by the professors that the patrons should give their sanction to the conversion of the *honorarium* into a *legal exaction*.

That "no challenge was made by the patrons in October, 1812," upon some of the professors of languages and philosophy demanding four guineas from the students who then entered their respective classes, may be easily explained by their ignorance of the fact; having given their sanction to a particular rate of fees in the two distinct classes of professors, viz. that of languages and philosophy, and that of medicine, it cannot be supposed that the patrons would for a moment doubt that the regulations would be strictly carried into effect.

In proposing that the parents and guardians of youth, and that the students themselves should be made acquainted with the amount of the fees payable in each class by means of schedules being hung up in the library and in the different class-rooms, the Patrons, the Committee are well aware, had not the slightest intention of proposing anything "derogatory to the honour and respectability of the university;" and they are decidedly of opinion that the publication so proposed could not produce any such effect; on the contrary, they think that it would be much more agreeable to the feelings of the students, and of their parents and guardians, and much more consistent with the dignity and delicacy of the professors, that the amount of their fees should be ascertained by a reference to a printed schedule, than that money matters should be subject of inquiry at, and perhaps of discussion between, them and the professors.

It is sincerely to be regretted that the expediency and propriety of such a measure had not occurred to the patrons or to the professors in 1812, when the change in the amount of the fees was made; but its omission at that time can form no good ground of objection to its being done as soon as the whole matter of class-fees and of class-dues shall have been settled and arranged by the Patrons, in whom the Committee cannot doubt that the power of doing so exists, from the opinions the Patrons have received from the most eminent lawyers, as well as from former practice. The Committee, however, conceive it would be more delicate in the Patrons to abstain from making any change while their general rights and privileges are a matter of discussion in a court of law. So soon as their right to regulate the fees shall have been made good by a law decision, the Committee are of opinion that the class-fees and dues should be fully considered, and properly regulated and promulgated for the information of the public.

It having been stated by the Senatus Academicus, that their communication is to be submitted to the Royal Commissioners appointed for the visitation of the university, the Committee suggest to the Council the propriety of the whole correspondence between the Senatus Academicus and the Patrons upon the subject, being sent to the Royal Commissioners for their information.

Joint Matriculation and Janitor's Fund.

Upon the death of the late Mr. Fyfe, the office of Upper Janitor was done away, and a sum of money annually paid to him as a salary became available for other purposes.

The Patrons having examined the accounts of the receipt and disbursement of this fund, gave their sanction to the continuance of the matriculation fee at ten shillings annually from each student; but they stipulated, that they should be furnished annually, at the term of Candlemas, with an account of this fund; and that, in these statements, the particulars of the sum, under the head of miscellaneous accounts, should be mentioned. In making this request, the Patrons felt that they were only discharging their duty to the university, as they were of opinion that the expenditure of a sum of money, amounting upon an average of the last three or four years, to little less than 1000*l.* per annum, should come under their observation, as they were by law guardians of the whole funds belonging to the university. The return for the last year has not yet been made, but the Committee are happy to find that the professors "have no disposition to fail in their promise to the Patrons of furnishing them annually with a statement of the appropriation of the library funds."

To conclude, the Committee are well aware that the Patrons most heartily concur in the wish that the differences now existing between them and the Senatus Academicus "may be terminated to the satisfaction, if possible, of both parties, and the honour and respectability of that establishment, which they are both bound to strengthen and uphold."

In the name of the Committee,

(Signed) WALTER BROWN, *P.*

Deliverance by the Council.

11*th October*, 1826.—The council approve of this report, and direct the same to be communicated to the Senatus, and also direct the clerks to transmit a full set of the proceedings on this subject to the Royal Commission.

(Init^{d}.) W. T.

The following unprinted Documents, relating to the Matriculation and Janitors' Fees, are noticed in the Records of the Commission.

(1.) Two Minutes respecting Matriculation and Janitors' Fees. Presented to the Commission, by the Senatus Academicus.

(2.) Anonymous Letter in regard to the Fees exacted by the Door-keepers of the University Classes. Presented to the Commission, 23rd January, 1827.

745

University of Edinburgh.

Appendix. Order VIII.

(3.) Letter from Mr. John Epps, Edinburgh, in regard to the Fees exacted by the Janitors of Edinburgh College. Presented 2nd April, 1827.

(4.) Anonymous Letter in regard to the Fee exacted for attendance at the Third Greek Class of the University of Edinburgh. Presented 2nd April, 1827.

(5.) Answer thereto, by Professor Dunbar, lying with the Clerk to be presented at the first Meeting of the Commission.

Letters to the Clerk, from Drs. Chalmers and M'Gill, in regard to Divinity Students paying Fees.

Edinburgh, January 6th, 1830.

6 January, 1830.

Dear Sir,—The facts of my case, in regard to fees, are very few; but in my opinion quite decisive. I, in the first place, inclose a copy of the advertisement by the patrons of the college of Edinburgh upon the subject. (*See copy thereof below, at* *.)

The fees thus enacted have been universally paid by the students, with the exception of a very few cases, in which I chose to remit or to return them. There has not occurred one instance either of complaint or resistance; and the only painful feeling ever manifested, was on those rare occasions when I declined the offer of them.

Neither has the amount of my attendance been at all affected—my examination list, composed of regular students, being only one beneath the list of last year, that is, a hundred and fifty-one upon the whole. I cannot speak conclusively of the number of partial students till the end of the Session, it being their habit to enrol throughout all the months of it.

I have no hesitation in stating it as my opinion, that the institution of fees is fitted to give a most beneficial impulse to theological education.

In respect to my extra-professional students, I may observe, that I have suffered greatly from a change in the hour of meeting for my first class. I had fixed upon the hour of three—but to save interference with other classes, I have been induced by my colleagues to meet at four. The consequence is, that many students who had meant to attend, have relinquished their intention. My attendance is chiefly from the town; and I am not aware of there being so many as twelve who are now prosecuting their regular university course, and are at the same time attending me in the capacity of general students. I hold it most desirable that every convenience should be held out to the students at large, for attending a class of natural theology and the Christian evidences; and I therefore sincerely hope that I may be allowed, in future, the hours either of two or three, for holding such a class.

I am, dear Sir, yours truly,

To James Aitken, Esq. (Signed) Thomas Chalmers.

---

* Copy of the advertisement referred to:—

Divinity Class—University of Edinburgh.

The Lord Provost, Magistrates and Council, Patrons of the University, hereby intimate, that by an Act of Council, dated the 4th day of March last, they authorised the professor of divinity to exact a fee of three guineas each, from those students, *not enrolled*, who may attend his lectures in the university; and that by two other Acts of Council, the one dated the 5th August, and the other the 9th September last, they further authorised the professor of divinity to exact a fee of two guineas from every student *enrolling* himself at the Divinity Hall, and that for each session.

City Chambers, Edinburgh, 5th November, 1829.

Order VIII *.—A Statement of the whole Expense which must be incurred by every Student in the Colleges of Edinburgh, passing through the Course of Study preparatory to the Degree of Master of Arts, including Class Fees, Price of Books, Library Money, Dues of Graduation, and all other necessary Charges.—(Ordered, 27th October, 1827.)

Return by the Senatus Academicus.

27 October, 1827.

General Return of the Expense incurred for Graduation in the Faculty of Arts, as made by the several Professors, in answer to the Requisition of the Royal Commission, as follows:—

I. Return from the Professor of Humanity.

Several of the books used in the junior and senior classes of Humanity, are in the hands of almost every student before he enters; such are—

	£	s	d
Horace, Hunter's edition	0	3	6
Virgil, ditto	0	3	6
Mair's Introduction	0	2	6
Adam's Antiquities	0	10	6
	£1	0	0

The books which generally require to be bought, are—

For the Junior Class, 1827—

	£	s	d
Livy, Vol. II. containing from book 21 to book 34, inclusive	0	3	6
Quintus Curtius	0	2	6
Ovid, Extracts from	0	0	6
	£0	6	6

University of Edinburgh.

Appendix. Order VIII*.

For the Senior Class—

Livy (as above)	£0	3	6
Cicero's recovered book, De Republica, in press, say	0	2	6
Quintilian. b. i. and x.	0	1	6
Outlines of Ancient Geography, with Maps	0	2	0
	£0	9	6

Total Amount of Books required—

Junior Class	£0	6	6
Senior Class	0	9	6

To the latter may be added the expense of a Humanity Class Library Catalogue which, though not enjoined, is strongly recommended, as furnishing the only permanent fund for buying and binding books . . . 0 2 0

	0	18	0
The Fee for each Class, including dues, is	£3	8	0

II. Return from the Professor of Greek.

Junior Class—

The Fee is	£3	3	0
Class Dues	0	5	0

The Books required are—

Moor's Greek Grammar	0	5	6
Greek Exercises	0	7	0

The Professor intends to divide the Exercises into two parts—the first part for the Junior Students, which will cost about three shillings.

The Collectanea Minora	0	7	0

Second Class—

The Fee is also	3	3	0
Class Dues	0	5	0

The Books required are—

Moor's Greek Grammar	0	5	6
Greek Exercises	0	7	0

The second part will be about five shillings.

The Books recommended are—

The Collectanea Majora, Vol. i.	0	11	6
Prosodia Græca	0	5	6

Third Class—

A fee for the third class, to such as have attended two sessions previously, has hitherto not been claimed: but the professor considers himself entitled to demand a modified fee, as the business of the third class is totally distinct from the other two. The class dues are always required. To those who enter the third class, without having attended the other two, the fee is 4*l*. 4*s*.

No books are absolutely required. One or other of the three volumes of the Collectanea Majora, and the Prosodia Græca, are recommended.

III. Return from the Professor of Mathematics.

The class fees are 4*l*. 4*s*. from general students, and 3*l*. 3*s*. from students in divinity.

Each student pays, in addition, five shillings to defray the expense of a janitor and fire, &c.

The text books in the first class are—Playfair's Geometry, price 9*s*. boards. Any book of trigonometrical tables and logarithms. The prices are various, from five shillings to about twenty-five shillings. The students are recommended to procure such a book as suits their means and future prospects.

Second Class—

1. Wood's Algebra, price 7*s*.
2. Simson's Conic Sections, price 6*s*.
3. Playfair's Geometry. This the students are supposed to have got when studying geometry.
4. Any trigonometrical tables and logarithms. This also, it is supposed, they have possessed before joining the class.

Third Class—

The text-book has hitherto been the translation of the abridgment of Lacroix's Treatise on the Differential Calculus; but this work is now difficult to be obtained, the impression being sold off. The price was eighteen shillings.

There are references made to various books on particular subjects, but the students may buy the books or not as they please.

IV. Return from the Professor of Logic.

Fee	£3	3	0
Class Dues	0	5	0

No books are required to be bought, though many are recommended to be consulted.

V. Return from the Professor of Rhetoric.

Fee to Divinity Students	£3	3	0
——— other Students	4	4	0
Class Dues	0	5	0

The books bought by students attending the Rhetoric Class are voluntary, not required by the professor.

747
University of Edinburgh.
Appendix, Order VIII*.

VI. Return from the Professor of Moral Philosophy.

Fee to divinity students	£3	3	0
—— other students	4	4	0
Class dues	0	5	0

The class fee is the whole expense incurred by students in the Moral Philosophy Class, in passing through the course of study preparatory to the degree of Master of Arts.

VII. Return from the Professor of Natural Philosophy.

The usual fee of the Natural Philosophy Class (including all minor dues and perquisites) is 4*l.* 12*s.*; but to all public or private teachers, *one guinea* is remitted; one guinea is likewise abated to all who attend the class a second time, and another guinea if they should join a third time.

The students of this class are not required to purchase books, though it is certainly expected that, for their own benefit, they will procure the Professor's Elements of Natural Philosophy, of which the first volume is printed, the selling price being 14*s.*; but by an arrangement with the publisher, he is bound to let those who produce the professor's ticket, have the book for 11*s.*

VIII. Return from the Dean of the Faculty of Arts.

Graduation fee in arts	£3	3	0
Janitor, for diploma	0	5	0
Joint matriculation and janitor's fee, fixed by a joint resolution of the honourable patrons and the Senatus Academicus—4 sessions at 10*s.* each	2	0	0

(Signed) Andrew Duncan, Secretary.

Since signing the above report, it has been observed that it does not entirely meet the terms of the requisition, and a summary view of the total expense necessary for obtaining the degree of A. M., both by students in divinity and others, is subjoined:—

One course of Humanity—Fee	£3	8	0			
Books	0	6	6			
				£3	14	6
—— Greek—fee	£3	8	0			
Books	0	19	6			
				4	7	6
—— Mathematics—fee	£3	8	0			
Books, say	1	4	0			
				4	12	0
—— Logic—fee				3	8	0
—— Rhetoric—fee				3	8	0
—— Moral Philosophy—fee				3	8	0
—— Natural Philosophy—fee	£4	12	0			
Books	0	14	0			
				5	6	0
Matriculation money				2	0	0
Graduation fees				3	8	0
Total expense in four sessions' study				£33	12	0
Those who are not students of divinity pay higher fees				3	3	0
				£36	15	0

(Signed) Andrew Duncan, Secretary.

Order IX.—A full and specific Return of the whole Rentals, Funds, Revenues, and Estate of the College of Edinburgh during the last fifty years; distinguishing the several sources from which the same may be drawn, as well as all occasional payments during the same period.

Return by the Senatus Academicus.

(1.) The funds of the college are under the management of the honourable patrons, from whom information has been required; but it may be observed, that in 1741 the patrons valued the whole funds and mortifications belonging to the college, and granted a bond for the sum to their college treasurer.

It is also necessary to state, that although the office of college treasurer be nominally retained in the town council, the management of the fund is transferred to the city chamberlain.

The only other fund belonging to the said college under the management of the Senatus Academicus, is one entitled the Joint Matriculation and Janitor's Fund, arising out of the fees paid by the students on enrolling their names in the album of the university, and of fees paid on graduation. An account of the amount of this fund will be given in Return to Order LXIII. By the last will and testament of General Reid, dated in 1806, a very large bequest will come under the administration of the principal and professors of the University of Edinburgh, for founding a professorship of music, and making additions to the library of the university, or otherwise in promoting the general interest and advantage of the university, in such way as the principal and professors thereof, for the time being, shall, in their discretion, think most fit and proper. Although the daughter of the testator is still

University of Edinburgh.

Appendix. Order IX.

alive, but far advanced in life, the present principal and professors, having no other funds at their disposal, have borrowed, upon the faith of their succession, two several sums of money, viz.—

1st., 3000*l.* for the purchase of a collection of birds for the Museum of Natural History, the interest of which is defrayed from the funds of the university, stated in Appendix 11.

2nd., 2500*l.* for the rebinding and repairing the books of the library, previous to its removal to the new apartments, stated in Appendix 63.

The late Sir James Erskine of Torry, Bart., has bequeathed, for the use of the university, a collection of pictures and marbles, now in the possession of his trustees, and to remain with him during his life.

N.B.—The following unprinted documents, relating to the bequest of Sir James Erskine, are mentioned in the Records of the Commission, as presented by the Town Council, and lying on the table of the Commission:—viz.

(1.) Minute of the trustees under the will of Sir James Erskine of Torrie, Bart., in regard to his bequest to the College of Edinburgh, 4th November, 1825.
(2.) Minute of said trustees, 19th November, 1825.
(3.) Report by the Lord Provost of Edinburgh in regard to the Torrie paintings, August, 1826.
(4.) Catalogue of the said paintings, 1826.
(5.) Descriptive catalogue of said paintings, made out by Andrew Wilson, Esq., 1826.
(6.) Report by W. H. Playfair, Esq., as to said paintings, 1826.

(2.)—Extract from General Reid's Will, dated 19th April, 1803.

19 April, 1803.

"And as to, for, and concerning all and every my said personal estate in the kingdom of Great Britain (save and except the said 1400*l.* Three per Cent. Consolidated Bank Annuities), my will and meaning is, that my said trustees shall stand possessed thereof upon trust, in the first place, for establishing and endowing a professorship of music in the College and University of Edinburgh, where I had my education, and spent the pleasantest part of my youth; and, in the next place, for the purpose also, after completing such endowments as hereinafter is mentioned, in making additions to the library of the said university, or otherwise in promoting the general interest and advantage of the university, in such way and manner as the principal and professors thereof for the time being shall, in their discretion, think most fit and proper: And in order properly to carry my will and intention in this respect into full effect, I direct my said trustees, and the survivors and survivor of them, and the executors and administrators of such survivor, to sell, lay out, transfer, assign, and otherwise dispose of my said last-mentioned personal estate, at the sight and with the privity and approbation of the principal and professors of the said university for the time being, as may be for that purpose deemed necessary, in such way and manner as will most effectually establish and perpetually secure a fund for the endowment of a professorship of music, as aforesaid, and the maintenance in all time thereafter in the said university of a professor of the theory of music—an art and science in which the Scots stand unrivalled by all the neighbouring nations, in pastoral melody and sweet combination of sounds: And my will and meaning is, that, in the event of the establishment of such professorship as aforesaid, the principal and professors of the said university do and shall within six months next after such an event shall have taken place, by a public ordinance of the university, make a declaration of what in their estimation the annual and perpetual salary to be allowed to such professor of music ought to amount to, the sum not being less than 300*l.* of good and lawful money of Great Britain; and that upon such declaration being so made as aforesaid, and notice thereof in writing given to my said trustees, or to the survivors or survivor of them, as aforesaid, and due provision made for securing the payment of such yearly salary, after the amount thereof has been ascertained, in the manner aforesaid; they my said trustees, or the survivors or survivor of them, or the executors or administrators of such survivors, shall and do, by such instrument or instruments as may, by the law of Scotland, be in such case requisite, make over the residue of my said last-mentioned personal estate to the principal and professors of the said university, for the purposes aforesaid; and by the said instrument declare, that the power and right of presentation or nomination of such professorship, and the superintendence, care, and management of the said fund shall, on their decease, be vested in, and be perpetually enjoyed in all time coming thereafter by the principal and professors of the said university for the time being; and that in case of misbehaviour, or neglect properly to discharge his or their duty, on the part of any professor or professors of the theory of music, to be from time to time appointed as aforesaid, the principal and professors of the said university for the time being, or the major part of them, shall have power, in their discretion, to dismiss such professor or professors, and to elect another or others in his or their place, and generally to establish, from time to time, such rules and regulation as may in their opinion contribute to give stability, respectability, and consequence to the establishment, and thereby carry my intentions into effect: And as I am the last representative of an old family in Perthshire, which on my death will be extinct in the male line, I therefore leave two portraits of me, one when a lieutenant in the Earl of Loudoun's regiment raised in the year 1745, and the other when a major-general in the army, to the principal and professors of the said University of Edinburgh, to be disposed of in such manner as the principal shall direct;—and to that university I wish prosperity to the end of time."

* * * * *

Extract from Codicil, dated 4th March, 1806, to General Reid's Will.

4 March, 1806.

"After the decease of my daughter Susanna Robertson, she dying without issue, I have left all my property in the Funds, or in Great Britain, to the College of Edinburgh, where I had my education, as will be found more particularly expressed in my will; and as I leave all my music-books (particularly those of my own composition) to the professor of music in that college, it is my wish, that in every year after his appointment he will cause a concert to be performed on the 13th February, being my birthday, in which shall be introduced one solo for the German flute, hautboy, or clarionet, also one march, and one minuet, with accompaniments by a select band, in order to shew the taste of music about the middle of last century, when they were by me composed, and with a view also to keep my memory in remembrance; the expense attending the concert to be defrayed from the general fund left by me to the college, and not from the salary to be paid to the professor of music, from which there is not to be any diminution."

University of Edinburgh.

Appendix. Order IX.

Copy of a Letter respecting General Reid's Funds, directed to the Principal of the University and College of Edinburgh.

"Sir—For the information of the College and University of Edinburgh, we beg leave to inform you, that by the directions of the late General John Reid's executors, we shall this evening forward by the Edinburgh mail-coach, a parcel addressed to the Principal of the College and University of Edinburgh, containing a copy of the General's will. From this you will observe, that in the event of Mrs. Robertson (the General's only child) dying without issue, the College and University of Edinburgh will have the benefit of the bulk of his personal property in Great Britain, which, as far as it can at present be ascertained, consists of the following particulars. viz.—

£54,000	0	0	Bank 3 per Cent. Consolidated Annuities.
3,900	0	0	East India Stock.
326	9	0	Bank Long Annuity.
155	0	0	Bank Short Annuity.
1,216	16	1	Balance of the General's accounts with Messrs. Coutts, his bankers.
3,000	0	0	About 3,000*l.* is expected to be due for arrears of pay. Off-reckonings, &c.

But the expense of the funeral, proving the will, and the pecuniary legacies, together with a few trifling debts, will, it is presumed, exhaust the balance of cash in the bankers' hands.

"The executors are informed Mrs. Robertson, who resides in Paris, has not any children.

"We shall very shortly forward to you the several portraits of the General, and the music, severally bequeathed to the university; and shall apprize you when they are sent, and by what conveyance.

"The executors have desired us to add, they shall always be ready to give every information respecting the General's affairs, which the university may require, on application being made either to Messrs. Coutts, bankers in the Strand, in which house Mr. Marjoribanks, one of the executors, is a partner; or to us, who have the honour, &c.

(Signed) "P. & J. Farries, Atkinson, and Johnson.

"*Lincolns Inn Fields, 3rd March*, 1807."

Return by the Town-Council.

There are sent herewith (as there is not time to have them copied), the principal Accounts of the College Revenue, from Martinmas, 1775 to 3rd October, 1825, consisting of 53 volumes, per inventory. These will shew the several sources of revenue and the occasional payments during the last 50 years.

Inventory of Account-Books of the College Revenue, and Documents relative thereto, transmitted by the Town Council of Edinburgh, in Answer to the 9th and 10th Requisitions.

Volume containing the Accounts of the College Treasurers from 31st January, 1640, to Martinmas, 1702, with the exception of the Account for the period from November, 1676, to November, 1679; containing also—Copies of Contract betwixt the Council and Kirk-session anent 8100*l.* Scots mortified to the College anno 1608;—Contract betwixt the Lords of Session, Council of Edinburgh, Advocates and Writers to the Signet, anent 3000*l.* Scots collected and mortified for the Professor of Humanity, &c. 1597;—subsequent Agreement in relation to said Mortification, anno 1648;—and an Account of the distribution of 1200*l.* Scots, left by Dr. Johnston for relieving poor prisoners out of Edinburgh Tolbooth,—all conform to a particular list thereof on the first page of said volume.

Volume containing the Accompts of the College Treasurers from Martinmas, 1702, to Martinmas, 1723, conform to particular list thereof on the first page of said volume.

Volume containing the Accompts of the College Treasurers from Martinmas, 1723, to Lammas, 1736, conform to a particular list thereof on the first page of said volume.

Volume containing the Accompts of the College Treasurers from Lammas, 1736, to Michaelmas, 1744, conform to a particular list thereof on the first page of said volume.

Volume containing the Accompts of the College Treasurers from Michaelmas, 1744, to Michaelmas, 1754, conform to a particular list thereof on the first page of said volume.

Volume containing the Accompts of the College Treasurer from Michaelmas, 1754, to Michaelmas 1764.

Volume containing the Accompts from the College Treasurer from Michaelmas, 1764, to Martinmas, 1774.

Accompt Hugh Buchan, City Chamberlain, with the College Revenue,—

Copy Bond of Corroboration by the City of Edinburgh to the College, dated 18th March, 1741, for 11,451*l.* 12*s.* 2¾*d.*, being the amount of the whole mortifications made to the college and received by the city, being a part of the City's debt, payable out of the City's duty on ale, the interest on which sum being usually paid at Candlemas and Martinmas.—Bond recorded in the Burgh Court books of Edinburgh, 8th April, 1741.

Rent-Roll of the Revenue of the College of Edinburgh, with a short account of its foundation, &c.—taken from the Account-book of the City of Edinburgh's Revenue, anno 1747.

Rent-roll of the Ground-annuals, Feu-duties, and Teind Tack-duties pertaining to the Kirk (called Old Kirk Livings), College and City of Edinburgh, with a short deduction of the Town's right thereto, taken from the Account-books of the City of Edinburgh's revenue, anno 1747.

Rental and Account of Ground-annual, Teind and Feu-duties, with Arrears preceding Martinmas, 1780, and Discharge to George M'Queen, for his Intromissions preceding Whitsunday, 1781, embracing the period from September, 1775, to Whitsunday, 1781.

Ditto and Account of the said George M'Queen, from Whitsunday, 1781, to Whitsunday, 1795.

Ditto and Account of John M'Ritchie, from Martinmas, 1794, to Martinmas, 1799.

Ledger, Ground-annuals, &c.

ORDER X.—A full and specific Return of the whole Expenditure of the College of Edinburgh, specifying in detail the mode in which their Revenue is employed, and the purposes and objects to which the annual Revenue or occasional Receipts have been, for the last fifty years, and are applied; and all the Persons or Office-bearers receiving regular or occasional Salaries, Payments, Gratuities, or Fees therefrom; specifying, separately, the Amount of the Public Burdens, Taxations, or Deductions, of whatever sort, borne by the Revenues of the said College.

Return by the Senatus Academicus.

A statement of the expenditure of the college funds, in the hands of the honourable patrons, has been required from them, and will be furnished to the Royal Commission; but the Senatus Academicus think it their duty to state, that although on former occasions they have required a statement of the expenditure of these funds, the patrons have refused to furnish any such statement.

* * * * * * *

Return by the Town Council.

The accounts lodged in answer to the ninth requisition, specify in detail, the mode in which the revenue is employed, and the purposes and objects to which the annual revenue or occasional receipt have been for the last fifty years, and are applied, and all the persons or office-bearers receiving regular or occasional salaries, payments, gratuities, or fees therefrom; with the amount of the public burdens, taxations, or deductions of whatever sort, borne by the revenue of the said college.

There is likewise sent a statement made up by the accountant for the city, showing the annual balances on the college revenue accounts, in the period from Martinmas, 1775, to 3rd October, 1825, and the sum advanced out of the city's proper revenue to meet those balances, amounting, exclusive of interest, to 14,132*l.* 10*s.* 7½*d.*

University of Edinburgh.

Appendix. Order X.

There is also sent statement, shewing the salaries and allowances to the principal and professors in the university, granted by the town-council, and paid out of the proper funds of the city, from 1775 to the present time, with a notandum in regard to Dr. William Thomson's bequest for the promotion of mineralogy in the university.

Likewise note of payments in relation to the College of Edinburgh, disbursed out of the proper revenue of the city, from Martinmas, 1775, to 3rd October, 1825.

Also statement shewing the salaries payable to professors in the university, for which the city's duty on ale and beer is burdened, in terms of the act of Parliament regulating the same.

Of the Accounts referred to in the foregoing Return, the following only are printed in the Records of the Commission.

GENERAL STATEMENT, collecting the Sums embraced under the Detailed States, made out by the City Accountant, dated 10th October, 1827, showing the situation of the Ground Annuals, Feu, and Teind Duties, in the year 1827, when compared with the year 1747.

DESCRIPTION OF THE SUMS.	Annual Sums in the Year 1747.	Situation of these in the Year 1827.			OBSERVATIONS.
		Not ascertained.	Purchased up, and otherwise accounted for.	In the present Rent-Rolls.	
	£. s. d.	£. s. d.	£. s. d.	£. s. d.	
1. Amount of the Ground-Annuals belonging to the Prebendary of the Kirk of Field, as contained on pages 2 to 5 inclusive, brought from said page 5, consisting in whole of 39 Articles	11 11 $1\frac{8}{12}$	9 17 3	—	1 13 $10\frac{8}{12}$	The greater part of the sums not ascertained, were above 30 years in arrear in 1747, and are now 110 years in arrear.
2. Amount of the Ground-Annuals payable for Houses and Shops in and about the City, as contained on pages 6 to 33 inclusive, brought from said page 33, consisting in whole of 281 Articles.	54 13 $10\frac{4}{12}$	47 15 $9\frac{7}{12}$	5 0 0	1 18 $0\frac{10}{12}$	The greater part of the sums not ascertained were above 30 years in arrear in 1747, and are now 110 years in arrear.
3. Amount of the Feu-duties payable out of 19 Parishes in the country, as contained on pages 34 to 45 inclusive, brought from said page 45, consisting in whole of 37 Articles.....	36 12 $10\frac{6}{12}$	4 15 8	17 16 $4\frac{8}{12}$	14 0 $9\frac{10}{12}$	Of the sums not ascertained, 4 articles, amounting to 3*s.* 6*d.*, were above 40 years in arrear in 1747, and are now 120 years in arrear; and another sum of £2 4 5*d.* is now $92\frac{1}{2}$ years in arrear.
4. Amount of the Teind-duties payable out of the Parishes of Currie and Livingstone, as contained on pages 46 to 53 inclusive, brought from said page 53, consisting in whole of 42 Articles	133 18 $6\frac{8}{12}$	13 13 2	117 9 $3\frac{5}{12}$	2 16 $1\frac{4}{12}$	Of the Teind-duties not ascertained, several were above 10 years in arrear in 1747, and are now 90 years in arrear.
Sums..... £	236 16 $5\frac{4}{12}$	76 1 $10\frac{7}{12}$	140 5 $8\frac{1}{12}$	20 8 $10\frac{8}{12}$	
In giving the particular sums detailed in the aforegoing States, it is proper to notice here, that there are other annual sums embraced in the present Rent-Roll, for property in various of the places before described, extending to 3*l.* 13*s.* $5\frac{3}{12}$*d.*, and which apply to those exhibited as not ascertained, but in respect of the alterations in the descriptions of a number of the original properties, arising in some cases from the houses having been taken down, and new buildings erected; several of the properties also, perhaps, being acquired by one party, and in other instances divided with the consequent alterations thereby in the amount of the annual sums payable, and the very remote periods at which such changes had taken effect, it is impossible to particularise them. The amount of the sums above stated as not ascertained, being corrected, therefore, to the extent of the said other annual sums, the result is as follows:—					
These other annual sums, per particulars thereof, described in the Appendix, (annexed to the said detailed States) page 59, extend to 3*l.* 13*s.* $5\frac{3}{12}$*d.*, which being deducted from the sums not ascertained, and added to those in the present Rent-Roll	—	3 13 $5\frac{3}{21}$	—	3 13 $5\frac{3}{12}$	
Makes..... £	236 16 $5\frac{4}{12}$	72 8 $5\frac{4}{12}$	140 5 $8\frac{1}{12}$	24 2 $3\frac{11}{12}$	
And adding the sum of the Teind-duties payable to the City, transferred to the College Accounts, and remaining in the present Rent-Rolls, per said Appendix, No. 2, page 61.	—	—	—	38 17 $9\frac{3}{12}$	This paid by the Duke of Buccleuch.
The Totals are..... £	236 16 $5\frac{4}{21}$	72 8 $5\frac{4}{12}$	140 5 $8\frac{1}{12}$	63 0 $1\frac{3}{12}$	

University of Edinburgh.

Appendix. Order X.

(2.)—Statement, shewing the Sums entered in the College Accompts, beyond the Ordinary Annual College Revenue. From Martinmas, 1775, to 2nd October, 1826.

I. *Legacies left to the College, viz.*

In the account from Martinmas, 1814, to Martinmas, 1815:—Sum bequeathed by Francis Newton, Esq., late of the Inner Temple, London, for the benefit of the institution, including 13*s.* 6*d.* of exchange on the draft £309 2 2

(Carried to Abstract, page 74.)

II. *Bequests, viz.*

By the Reverend James Stewart, of Lancaster Court, in the parish of St. Martin's-in-the-Fields, London—Price of 1000*l.* Three per Cent. Consols, deducting duty . £603 0 0

This sum is entered in the charge of the college account, from Martinmas, 1810, to Martinmas, 1811, and there is annually paid out of the college funds the sum of 30*l.* 3*s.* of bursaries on the bequest.

(Carried to Abstract, page 74.)

III. *Purchase Money of Superiorities and Feu-duties.*

1. Of 2*l.* 10*s.* feu-duty for property, head of Robertson's Close, sold to the trustees for the South Bridge—In account from Martinmas, 1786, to Martinmas, 1787 . . £ 62 10 0
2. Of 5*l.*, part of the feu-duty payable for property head of Blackfriar's Wynd, sold to Miss Nicolson 100 0 0

This sum entered in account from Martinmas, 1788, to Martinmas, 1789.

3. Of the lands of Nether Brotherstones, parish of Soutra, sold to John Anderson of Whitburgh, viz.

Purchase-money of 1*l.* 2*s.* $2\frac{8}{12}$*d.* of feu-duty .	£22 4	5^4
Do. of 69*l.* 16*s.* 8*d.* Scots of valuation . . .	69 16	8
	92 1	1^4

4. Of the lands of Malleny, &c. in the parish of Currie, sold to Major-General Scott of Malleny, viz.

Purchase-money of 3*l.* 1*s.* 8*d.* of feu-duty . . .	£61 13	4
Do. of 416*l.* 11*s.* 6*d.* valuation Scots . . .	466 11	6
	528 4	10

These sums under Nos. 3 and 4 are entered in the charge of the college revenue account from Martinmas, 1812, to Martinmas, 1813.

5. Of the lands of Powis and others, in the parish of St. Ninians, sold to Stewart Marjoribanks, wine-merchant, London.

Purchase-money of 2*l.* 2*s.* $2d^8$ of feu-duty . . .	£ 63	5 3
Do. of 446*l.* 5*s.* 9*d.*, valuation Scots . . .	446	5 9
	509	11 0

This sum is entered in the college revenue account from Martinmas, 1813, to Martinmas, 1824.

6. From George Home Falconer, for the superiority and feu-duties of the lands in the parish of Soutra, as under, viz.—

1. Town and lands of Redhall, commonly called Musedeanhead,	feu-duty	£1	0 0
2. Room and lands of Soutra, with the mill and mill-lands,	do.	1	10 0
3. Part of the lands of Soutra, belonging to Brown of Braid,	do.	0	8 4
4. Lands of Beadman's Acres . . .	do.	0	2 8^s
5. Lands of Gilston	do.	1	2 2^s
		650	0

This sum is entered in the college revenue account, from Martinmas, 1815, to Martinmas, 1816.

7. Of the lands of Spittal and Spittal Mill, sold to the Earl of Hopetoun—
Purchase money of 1*l.* 10*s.* 6^s, the feu-duty, and for the superiority . . 156 11 1^4
8. Of the lands of Currie, sold to Samuel Anderson, Esq., banker—

Purchase-money of 1*l.* 1*s.* of feu-duty . . .	£ 31	10 0
Do. of the superiority	628	7 6
	659	17 6

. Of the lands of Over Brotherstone, sold to George Hunter, Esq. of Callender—
Purchase-money of 2*l.* 4*s.* $11d^8$, the feu-duty, and for the superiority . 145 0 0

The sums under No. 7, 8, 9, entered in the charge of the college revenue account, from Martinmas, 1816, to Martinmas, 1817.

Sum of these £2903 15 6^s

From which there falls to be deducted, the payments made connected with the above alienations, and entered in the discharge of the college revenue accounts, viz.—

1. Sum paid to Samuel Anderson, Esq., for re-conveying the superiority of the lands of Curriehill, including expenses £985 1 10

Credited in College revenue account, from Martinmas, 1819, to Martinmas, 1820.

2. Sum paid as the expense of the compromise relative to the superiority of the lands of Gilston 399 10 1

An obligation was at same time granted by James Gibson, W. S., as agent for General Maitland and the Marquis of Tweeddale, that in the event of the superiority being sold to the same extent, the same would be made forthcoming to the town.

The above sum credited in the college revenue account, from 30th September, 1822, to 29th September, 1823.

Together, 1384 11 11

Remains £1519 3 7^s

(Carried to Abstract, page 74.)

753
University of Edinburgh.
Appendix, Order X.

III. *Purchase-money—(continued.)*

Note.—The following other feu-duties have been sold and the prices, for the reasons noticed below, have been entered in the proper revenue accounts of the city of Edinburgh:—

1. Of the lands of Grothill, sold to James Cheape, Esq.—
   Purchase-money of 1*l.* 7*s.* 8*d.* of feu-duty £41 3 4
   This feu-duty was sold to Mr. Cheape along with that of the lands of Newington, belonging to the city, and there was received for the superiorities, the sum of 900*l.*
2. Of the lands of Craigcrook, sold to Archibald Mackinlay, Esq.—
   Purchase-money of 2*l.* 6*s.* 8*d.* of feu-duty £70 0 0
   This feu-duty was sold to Mr. Mackinlay, along with that for the lands of Whitehouse, &c., belonging to the city, and there was received for the superiorities, the sum of 900*l.*
3. Of part of the lands of Balerno, sold to Andrew Bonar, Esq.—
   Purchase-money of 6*s.* 8*d.* of feu-duty £10 0 0
   This feu-duty was sold to Mr. Bonar, along with that for the lands of Morningside, &c., belonging to the city, and there was received for the superiorities, the sum of 900*l.*

These sums are all brought forward in the proper revenue account of the city, in respect the sums proper to the college revenue were not fully distinguished.

IV. *Composition Duties received from Vassals.*

1. In the account from Martinmas, 1794, to Martinmas, 1795—
   From Maurice Carmichael, for Curruber's land . . . . £0 0 7[d]
2. From Martinmas, 1795, to Martinmas, 1796—
   1. Marion Clark and Elizabeth Tait, part of a tenement foot of High School Wynd £5 16 8
   2. Francis Clark, the other part of ditto . . . . 1 18 10[d]
   Together . . . . . 7 15 6[d]
3. From Martinmas, 1799, to Martinmas, 1800—
   Heirs of John Dick, for the lands of Camsie 1 0 0
4. From Martinmas, 1800, to Martinmas, 1801—
   1. Robert Pringle, lands of Beadsmans' Acres, Soutra . . £0 2 2[d]
   2. William Peaston, for a tenement, College Wynd . . 12 0 0

56. Lord Dun and Mr. Erkine of Grange..... Purpose not specified.....	..	..	..	514 0 0	514 0 0	This is the debt of 333*l.* 6*s.* 8*d.* due by the Earl of Mar, with accumulated interest recovered.
57. Sir And. Ramsay .For four Bursars.....	555 11 1⅓	..	..	..	555 11 1⅓	This is the 333*l.* 6*s.* 8*d.* in the name of Mr. Andrew Ramsay, and the 222*l.* 4*s.* 5¼*d.* in the name of Sir Andrew Ramsay, per printed Return of the number of Bursaries.
Sum of these £	6452 3 4	3190 7 2⅝	147 4 5¼	946 8 4	10,736 3 4⅓	
In Bond granted by the City in 1741, for 11,451*l.* 12*s.* 2*sd.*, there is included a sum of 915*l.* 10*s.*, which, by Act of Council of 21st May, 1718, is explained to be 2400*l.* Scots mortified in 1656, of which neither the principal nor annualrent had been accounted for to the College; and the same being accumulated, amounted to the sum of 10,986*l.* Scots, then added to the debt due by the City to the College, making in sterling the said sum of £915 10 0	..	..	..	..	..	By the Act 21st May, 1718, the interest of this sum is to be appropriated towards the maintenance of the fabric of the College.
The 2400*l.* Scots alluded to, however, are contained in the aforegoing List, being No. 49, William Wauchope, 400*l.* Scots, or 33*l.* 6*s.* 8*d.* sterling; and Archibald Johnstone, No. 50, 2000*l.* Scots, or 166*l.* 13*s.* 4*d.* sterling; and therefore fall here to be deducted from 915*l.* 10*s.*—*inde* in sterling..... £200 0 0						
And there falls also to be deducted 13*s.* 4*d.* Scots, or 1*s.* 1⅓*d.* sterling—the said sums being stated in the Act of Council, 4th September, 1723, at 2400*l.* 13*s.* 4*d.*, in place of 2400*l.* Scots..... 0 1 1⅓						
Deduct..... 200 1 1⅓						
Remains	..	..	715 8 10⅝	..	715 8 10⅝	
Sums included in the City's Bond to the College, dated the 18th March, 1741*	6452 3 4	3190 7 2⅝	862 13 4	946 8 4	11,451 12 2⅝	
Class II.—*Bursaries not included in the Bond of 18th March, 1741, and founded prior to its date.*						
In the Schemes of the Mortifications for Bursars in the College Accompts, there are three Bursaries founded prior to the date of the Bond in 1741, and still acted upon, but which are not included in that Bond, viz.—						
John M'Morran .....For a Bursar.....	55 11 1⅓	..	..	..	166 13 4	
Mausie Weir..... For a Bursar.....	55 11 1⅓					
David Jenkins..... For a Bursar.....	55 11 1⅓					
Class III.—*Sums mortified for Bursars, subsequent to 18th March, 1741.*						
Thomas Fraser .....For support of two Boys at the College.....	800 0 0	..	..	..	1790 15 6⅝	
Rev. James Stewart, South Carolina For three Bursars.....	603 0 0					
John Penman, Minister of Bothkennar—For a Student of Divinity, and a Student of Philosophy, and two Scholars at the High School..	387 15 6⅝					
Lastly, By the Act of the Town Council, 6th September, 1815, there was added to the Bursary of 100*l.*, founded by John Penman, merchant in Edinburgh, No. 5 of Class I. of the preceding List, the sum of 195*l.*, being the Annual Rent of the Mortified Money for 39 years, in which the Bursary had been vacant.....	195 0 0	..	..	..	195 0 0	See Excerpts from the Council Records, in separate paper, explanatory of this additional sum.
Sums.....£	8604 12 2⅝	3190 7 2⅝	862 13 4	946 8 4		
Total of the Mortifications in the Year 1825 .....£					13,604 1 1⅝	

* Note.—It is proper to notice, that there seems to have been a mistake on the part of the City in accumulating the interest on the 2400*l.* Scots above noticed, from 1656 to 1718, because it appears from the College Accompts during the said period, that the interest arising on the 2400*l.* Scots had been annually accounted for to the College Treasurer from Lammas, 1658.

By means of this mistake, therefore, the College acquired above 700*l.* of the proper funds of the Burgh in the year 1718.

It may be also noticed, that for the following Mortifications in the preceding List, no Bursars appear to have been presented, or any particular payments made on account of the Mortifications, viz.—

No. 12. William Couper	£5 11 1⅓
No. 14. Lord Lindsay	111 2 2⅝
No. 31. Margaret Couper	27 15 6⅝
No. 36. Thomas Muir	5 11 1⅓
No. 52. Bishop Leighton	104 5 6⅝
Sum of these Mortifications	£254 5 6

University of Edinburgh.

Appendix, Order X.

Upon the whole, the situation in the year 1825, of the several sums herein detailed, appears to be as follows:—

1st, Of the sums for Bursars, extending to				£8,604 12 2^{8}
Nos. 12, 14, 31, 36, and 52 of Class 1st, making together 254*l.* 5*s.* 6^{8}*d.*, have not been applied on account of Bursars—*inde*			254 5 6^{8}	
As also, the balance of 213*l.* 6*s.* 8*d.*, under No. 44 of Class 1st			213 6 8	
Which deducted				467 12 2^{8}
Leaves the amount exhibited in the printed Return of the number of Bursaries,				8,136 19 11^{10}
And made up thus—				
1. Sums included in the Bond dated 18th March, 1741, being the other particulars of Class 1st, under the head of Bursaries, after deducting the items extending to the above sum of 467*l.* 12*s.* 2^{8}*d.*—*inde*			5984 11 1^{4}	
2. Sums not included in that Bond, and stated separately, being—				
The Particulars of Class 2nd	£166 13 4			
The Particulars of Class 3rd	1790 15 6^{6}			
And the addition made to Penman's Bursary of	195 0 0			
			2152 8 10^{6}	
Making the said Sum of			£8136 19 11^{10}	
2nd, The sums for Allowances to Regents and Professors			£3190 7 2^{8}	
For the use of the College			862 13 4	
And for Purposes not specified			946 8 4	
Extending to				4,999 8 10^{8}
Are all included in the Bond of 18th March, 1741;—And,				
3rd, The before-mentioned sum of 467*l.* 12*s.* 2^{8}*d.*, mortified for Bursars, but not so applied, and deducted from the amount under the head of Bursaries, being included also in the Bond of 18th March, 1741, falls here to be added				467 12 2^{8}
Making the Total as before				£13,604 1 1^{2}

(Signed) Arch. Bruce, *Accountant.*

Edinburgh, 10*th September*, 1827.

PAPERS—1. Abstract of the Charge and Discharge of the College Revenue, Anno 1825.
2. Statement as to the Salaries and Allowances paid to Professors.
3. Ditto ditto ditto.

Abstract of the Charge and Discharge of the Revenue of the College of Edinburgh, as exhibited in the Account Books thereof.

Account (exclusive of arrears) from 4th October, 1824, *to 3rd October*, 1825. 4 October, 1824. to 3 October, 1825.

Charge.

1. To interest of the city of Edinburgh's bond of corroboration to the college for 11,451*l.* 12*s.* 2$^{8}_{12}$*d.*, at 5 per cent., and of 800*l.* mortified by Thomas Fraser, at 4 per cent. for bursars, one year			£604 11 6
Note.—The abstract also includes 66*l.* 8*s.* 8*d.* to replace sums short stated of the interest at 5 per cent. in the bond payable at Whitsunday and Martinmas, 1823, and at Whitsunday, 1824—the interest paid at these terms having been calculated at lower rates than 5 per cent. But as the 603*l.* of principal for Stewart's bursary has been entered in the charge from Martinmas, 1810, to Martinmas, 1811, the year in which it was received, in place of the interest arising thereon being annually brought forward—to show, therefore, the annual charge applicable to the payments, the interest on that sum falls to be introduced here, *inde*			£30 3 0
There falls also to be introduced for the same purpose,—			
1. The interest on the following mortifications not included in the bond of 18th March, 1741, and founded prior to its date, viz.:—			
John MacMorran, merch., for a bursar	£55 11 1$^{4}_{12}$		
Mausie Weir, relict of Rd. Dobie, ditto	55 11 1$^{4}_{12}$		
David Jenkins, merchant, ditto	55 11 1$^{4}_{12}$		
Sum	£166 13 4		
Five per cent. whereon is		8 6 8	
2. The interest on the addition made in 1814 to the bursary of 100*l.*, founded by John Penman, for the annual rent of the said mortified money during thirty-nine years, in which the bursary had been vacant, being 195*l.*—Five per cent. whereon is		9 15 0	
Sum			48 4 8
2. To interest of the city's bond for 387*l.* 15*s.* 6$^{6}_{12}$*d.*, being the mortified money for bursars of the Rev. John Penman, at 4½ per cent. one year			17 9 0
3. To James Hislop, keeper of the mortcloths, for the dues thereof, per monthly bills, examined and attested by the keeper of the mortcloth register			155 12 6
4. Compositions paid by vassals, four *in number*			0 13 7$^{8}_{12}$
5. Ground-annuals, feu and teind-duties, consisting of 55 articles			61 13 11$^{4}_{12}$
Amount of ordinary revenue for the year, as exhibited in the account book of the college revenue			£888 5 3

University of Edinburgh.

Appendix, Order X.

4 October, 1824. to 3 October, 1825.

DISCHARGE.

Allowance to accountant, &c., at passing account			5	15 0
Amount of expenditure for the year, as exhibited in the account book of the college revenue				1540 5 9
Deficiency				£652 0 6

The discharge also includes 66*l.* 2*s.* 2*d.* as having been due to two of the professors, on account of former years.

Edinburgh, June 30, 1829. (Signed) ARCHD. BRUCE, *Accountant.*

Statement, shewing the Salaries and Allowances to the Principal and Professors in the University, granted by the Town Council, and paid out of the proper Funds of the City.

(1.) To the Professor of Botany—

1. Of annual salary	£27	15 6	
2. Of annual allowance towards the support of the botanic garden	25	0 0	
			£52 15 6

The salary was formerly stated in the account of the college revenue. It has been paid since Martinmas, 1806, along with the allowance for the garden, out of the proper funds of the city. The allowance of 25*l.* for support of the garden was granted in 1763, in consequence of a representation from the Barons of Exchequer, the new garden on Leith Walk being at that time established, and the lease of the old garden, which is the property of the Trinity Hospital, given up to the city.

The city remained in possession of the lease only for a short period, owing to a defect in the titles; by reason, however, of subsequent representations from the Professor of Botany, the city agreed to continue the annual payment to him.

(2.) To the Professor of Agriculture an yearly salary of 50 0 0

This Professorship was established by William Pulteny, Esq. with the sanction of the town-council in 1790, Mr. Pulteny having mortified the sum of 1250*l.* with the city for the payment of the said yearly salary of 50*l.* The 1250*l.* was paid to the chamberlain, and is brought forward in the account of his intromissions with the proper funds of the city for the year ending Martinmas, 1790.

(3.) To the joint Professor of Civil Law, Alexander Irving, an yearly allowance of 30 0 0

In respect the joint Professor reaped no benefit from the salary attached to the professorship, the same being wholly enjoyed by his colleague, John Wilde, (who is incapacitated from performing the duties), the town-council, upon a representation from the Faculty of Advocates, agreed to make payment of the 30*l.* annually during the life of Mr. Wilde, the Faculty of Advocates having likewise agreed to pay 50*l.* annually.*

Carried forward £132 15 6

* From a return made by the University, it appears that the sum paid by the Faculty is 70*l.*

7,159

University of Edinburgh.

Appendix. Order X.

	Brought forward	£132 15	6

(4.) To the Principal and Professors, of annual allowance for house-rent in lieu of the possession of a house in the college.

In consequence of the removal of houses in the college set apart for the residence of the professors to allow the new buildings to be carried on, an application was made to the town-council in 1797 by the principal and professors, for payment of different sums in name of house-rents, and which was acceded to, on condition that the city should become creditors upon any farther funds to be provided and recovered for the expenses to be advanced, and interest thereon, in terms of an agreement with the trustees for the college buildings, dated 4th December, 1797. These allowances have continued to the present time, and are as follow:—

1. To the Principal	£40 0 0	
2. To the Professor of Divinity	35 0 0	
3. To the Professor of Hebrew	35 0 0	
The present Professor of Hebrew is also Librarian, and resides within the college. This allowance, however, is still continued to him.		
4. To the Professor of Greek	35 0 0	
5. To the Professor of Humanity	35 0 0	
6. To the Professor of Mathematics	35 0 0	
Sum of these		£215 0 0
In all		£347 15 6

It is right to notice, that from the accounts in the period of the last 50 years, it appears there were the following other payments out of the proper funds of the city, which have now ceased, viz.:—

1. To the Professor of Public Laws, the bishop's rent, payable for the lands of Bearford, being the conversion of 7 bolls bear annually.
This payment continued from Martinmas, 1775, down to crop 1802, at which term the same ceased.
2. To J. Hill, Professor of Humanity, an yearly allowance of 50*l.*
The town-council granted this allowance in 1789, out of the proper funds of the city, in respect there were no funds belonging to the college, applicable for the payment to be made during the life of Mr. Stewart, his predecessor. The payment was made down to Lammas, 1793.
3. To the Professor of Moral Philosophy, an yearly allowance for house-rent of 35*l.*
This payment commenced with the allowances to the other professors for house-rent, and continued to be paid to Whitsunday, 1809, and was last paid to Professor Dugald Stewart.

It may be farther noticed, that Miss Elizabeth Thomson of London, on 5th September, 1821, lodged with the city, at 5 per cent., the sum of 1511*l.* 4*s.* 2*d.*, being one half of the residue of her brother Dr. William Thomson's personal estate, bequeathed by him for the promotion of mineralogy in the University of Edinburgh, and liferented by Miss Thomson, yielding an annual sum of 76*l.*

(Signed) Arch. Bruce, *Accountant.*

Edinburgh, September 22, 1826.

Statement, showing the Salaries payable to Professors in the University, for which the City's duty on Ale and Beer is burdened, in terms of the Acts of Parliament regulating the same.

1. To the Professor of Civil Law, by the act 3 Geo. I. cap. 5, (1716-17) an yearly salary of	£100 0 0
2. To the Professor of Universal Civil History by the act 9 Geo. I. cap. 14, (1722-23) do. of	100 0 0
3. To the Professor of Scots Law, per do. do. of	100 0 0
4. To the Professor of Divinity, per do. do. of	50 0 0
5. To the Professor of Anatomy, by the act 38 Geo. III. cap. 54, (1798) do. of	35 0 0
In all,	£385 0 0

(Signed) Arch. Bruce, *Accountant.*

Order X*.—Copies of all Deeds of Mortification of every description in favour of the College of Edinburgh.

Return by the Town Council.

As it appeared to be the object of the Right Honourable Commissioners, at the examination of Mr. Carlyle Bell, one of the principal clerks of the city, when this requisition was directed to be made, to trace back the mortifications from the earliest period; and as this can be best done by reference to documents of an early date, there is produced herewith—

(1.)—Extract from the Records of the Town-Council of the City of Edinburgh, dated 3rd April, 1640, in the following terms:—

"*Tertio Aprilis I^m VI^c Quadragesimo.*

"The same day, forsameikle as the proveist, baillies, and counsell, finding it necessar and expedient that the rentis and soumes of money pertening and dotted to the college of this burgh, sould be sequestered and keiped be themselffis, to the particular uses quhairunto the samin wes destinat and appointed, and for this effect hes appointed ane thesaurer, who sould ingather the saids rents, and finding that the bygane thesaurer of this burgh hes ressavit certan soumes of money from certan persounes, piouslie and weill affected towards learning, to the particular uses underwrittin of the said colledge, in maner following, viz.—from the lords of sessioun, proveist, baillies, and counsall of this burgh, and from the advocattis wrytters to the signett, and clerks of sessioun, the soume of thrie thowsand punds, for intertayneing of ane maister of humanitie and six bursaris within the colledge of this burgh, conforme to the contract past betwixt the saids pairtyes theranent, daittit about December, 1597: Item, ressavit frome umquhile James Bannatyne the soume of ane hundreth merkis, for the use of the said colledge, conforme to ane act of counsell, dattit the 19 of Julij, 1598: Item, ressavit from the aires of umquhile Williame Coupar, tailzeour, the soume of ane hundreth merkis, to help to intertein ane student within the colledge, conforme to ane act of counsell, daittit the 23 of December, 1697: Item, frome the ministers and kirk session of Edinburgh, aucht thousand and ane hundreth punds, to be imployed for the annuelrent of ane thousand merkis for the sustentatioun of the maisters and regents of the colledge, conforme to ane act of counsell, daitted the last of September, 1608: Item, ressavit frome Chairles Scherar the soume of ane thousand merkis, for the yeirlie annuelrent of ane hundreth merkis, to be payit to him during his lyftyme, and efter his deceis to Johne Scherar, his cusein germane, during his lyftyme; and efter his deceis, fyftie merkis of the said rent, to be im- 3 April, 1640.

University of Edinburgh.

ane hundreth pundis ; Item, to the four regents yeirlie sax hundreth thriescore sax pundis threttein s. 4d.: Item, to the bursaris yeirlie tua hundreth punds: Item, to the keiper of the bibliotheck yeirlie tua hundred thriescoire sax pundis 13s. 4d. : Item, to the janitor yeirlie twentie pundis: Item, to the beddell yeirlie twentie pundis: Item, to the minister of Currie yeirlie four hundreth fourscoir saxtein punds threttein shillings four pennyis: Item, to the minister of Kirkurde yeirlie fyve hundred thretteín punds sex shillings aucht pennyes: Item, to the collector of the rentis of Currie yeirlie thriescore sex punds threttin shillings four pennyes."

3. Extract act of council, dated 23rd January, 1656, found among the papers belonging to the college, in the possession of the town, narrating, " Forsameikle as the provest, baillies, and counsell, be thair act of counsell of the dait the thrie day of April, 1640 yeirs, upon grave consideratiounis moveing them, fand it necessarie and expedient to set apairt the haill soumes of money mortified to the colledge of this burgh, and to have them settled in a stock be thaimselffis, and imployed to the severall uses quhairunto they were destinat, And for that effect did appoynt ane theasaurer of the colledge, who be himself and his successors in the office sould have the cair and manageing of the samen; Lykeas the provest, baillies, and counsell for the time did condescend upoun a speciall rentall of all the soumes of money pertening to the colledge, and dotted thairto be the benefactors thairof; And sieing be the good blessing of God and benevolence of nighbors, the rentall of the colledge hes since that tyme encreased in a verie considerable measure, swa that the counsell finding themselffis bound in dewtie and conscience to follow the futestepps of thair predecessors in so good a warke, have thoght it most necessarie and expedient not onlie to repeitt what is contained in the former rentall, but also to add thairunto all such uther soumes of money as hes bein bequeathed and mortified thairto sensyne, and intromitted with be the counsell to mak up a totall for the tyme, to the effect the counsell may know what they or their predecessors, provest, baillies, and counsell are anywayis engadged to the colledge, of the soumes mortifiet thairto and received be thair thesaurers fra the benefactors for the use thairof; Lykeas, the provest, baillies, and counsell haveing perused the haill counsell-books, touns comptis, and uthers sen the foundatioun of the colledge, and made the most narrow searche that can be, *at the sicht of the regents and present thesaurer of the colledge:* They find that the provest, baillies, and counsell, and the thesaurers of this burgh hes ressaved fra the persones underwritten, the particular soumes of money efter mentionat mortifiet to the colledge of this burgh, converted to thair awine use, and for the quhilk they are debtors as followis, viz.—From the lords of session, provest, baillies, and counsell of this burgh, and from the advocatts, wrytters to the signet, and clerks of sessioun, the soume of thrie thowsand punds for intertening of ane master of humanitie, and sex bursares within the said colledge, conforme to the contract past betwix the saids pairties thairanent, daittit in December, 1597 yeires: Item, received from umquhill James Bannatyne the soume of ane hundreth merkes for the use of the colledge, conforme to ane act of counsell, daittit the nynten day of July, 1598 yeires: Item, resaved from the aires of the deceist William Cowper, tayleour, the soume of ane hundreth merkes to help to intertein ane student within the colledge, conforme to ane act of counsell, daittit the twentie-third day of December, 1607: Item, from the ministers and kirk-sessioun of Edinburgh, eight thowsand and ane hundreth punds to be employed for the annuelrent of ane thowsand merkes for the sustentatioun of the masteris and regents of the colledge, conforme to ane act of counsell, daittit the last day of September 1608 yeires: *Item, resaved be Thomas Speir, thesaurer, from Lord Lyndsay for dimitting of the benefice of Haddingtoune, againe be the toune in his favours, anno 1609 yeires, ane thousand thrie hundreth threttie-thrie pundis sex schillingis eight penneis: Item, resaved from Charles Sheirar the sowme of ane thowsand merkes, quhairof fyve hundreth merkes employed for the colledge for intertening of the regentis, conforme to ane act of counsell, daittit the penult day of July 1617, for the quhilk the counsell are debtors, and the uther fyve hundreth merkes for the hospitall: *Item, ressavit fra Isobell Allane, relict of the deceist David Alexander Merchand, in name of her thrie dochters, executours to the defunct, the soume of twa hundreth merkis, conforme to ane act of counsell, daittit the 4 day of Marche, 1617: *Item, ressavit from Hew Wright, merchand, the right of assignatioun to the soume of ane thowsand merkis dew to him be the Lady Broughtoun and her cautioners, the annuelrent quhairof to be payit to himself dureing his lyftyme, and efter his deceis for sustentatioun of a professor of divinitie, within the said colledge, daittit the penult day of December, 1618: *Item, ressavit frome Alexander Stobo, messinger, thrie hundreth merkis money, for sustentatioun of a professor of divinitie, within the said colledge, reserveand his awne liferent thairof, conforme to ane act of counsell, daittit the fyftein day of January, 1619: *Item, ressavit frome Mr. Samuell Johnstoun, for the executours of the deceist Archibald Johnstoun, merchand, the soume of ane thowsand merkis left in legacie, to be imployed upoun proffite, for maintenance of bursares and students, in the said colledge, conforme to ane act of counsell, of the dait the twentie eight of May, 1619: Item, ressavit from Sir William Nisbet, of Dean, the soume of eleven hundreth punds, for quhich they are obleidged to pay ane hundreth punds yeirlie, for sustentatioun of a professor of divinitie within the said colledge, conforme to twa acts of counsell, the ane daittit the second day of Junij, 1617, and the uther daittit the twentie day of Apryll, 1621 yeires: *Item, resaved fra Gilbert Hay, executor confirmitt to unquhile James Young and Barbara Robieson his spous, the soume of ane hundreth merkes to be imployed upoun profite, for the use of twa poor (students) in the said colledge, for thair help, twa year before they be maid master, conforme to ane act of counsell, daittit the twentie ane day of July, 1619: Item, resaved from the aires of William Rig, the soume of sex hundreth fyftie fyve merkis, for payment of ane yeirlie annualrent of thriescore twa merkes, and ane half for help to intertein a professor of divinitie within the said colledge, conforme to ane act of counsell, daittit the twentie thrid of August, 1620: Item, from Thomas Speir, the soume of ane thousand merkes to be imployed for the maintenance of a professor of divinitie, within the said colledge, conforme to ane act of counsell, daittit the third day of Januar, 1621: Item, from the executors of umquhile John Lawtie, apothecar, the soume of ane hundreth punds, ordaneing to buy books thairwith, conforme to ane act of counsell, of the daitt the nyntein day of July, 1622: Item, resaved from the executors of umquhile Mr. Walter Balcanquhile, the soume of ane thousand and ane hundreth merkes towards the maintenance of a professor of divinitie within the said colledge, conforme to ane act of counsell, daittit the threttie of August, 1622: *Item, resaved from Isobell Broun, relict of the deceist Johne Massone, merchand, the soume of thrie hundreth merkis money, to the use of a professor of divinitie within the said colledge, conforme to ane act of counsell, daittit the twentie nynth of October, 1622: Item, resaved from the executors of umquhile Margaret Stewart, the soume of thrie hundreth merkis, to be imployed to the use of the colledge, conforme to ane act of counsell, daittit the tenth day of December, 1623: Item, resaved from the executours of

* Nota.—The various sums marked thus* as mortified to the town for the use of the college, seem to have been omitted in the Act of Council, dated April 3, 1641.

University of Edinburgh.

Appendix. Order X*.

3 April, 1640.

University of Edinburgh.

Alexander Wright to the provest, baillies, and counsell, severall soumes of money, to the uses conteaned in the assignatioun; and in speciall the sowme of thrie thousand thrie hundreth fourscoir nynetein pund nynetein shillings four penneis of principall, dew be Mr. Gilbert Mowat and his cautioners to the thesaurers of the kirk and colledge, equallie betwixt thaim, conforme to ane Act of counsell of the twentie-fourth of August, 1642 yeires. Lykas the counsell being addebtit to Robert Murray certaine sowmes of money, they assigned the haill sowme to the said Robert, in satisfactioun of thair debt to him, *pro tanto*, quhairof the colledge pairt, in principall and annuelrent, extends to twa thowsand thrie hundreth fourscoir ane pund, and became debtors to the colledge for payment thairof, conforme to ane act of counsell of the fourtein of Marche, 1655. Item, thair wes left in legacie to the colledge of this burgh, be Issobell Richiesone, relict of umquhile William Little, merchand, the sowme of eight hundreth punds, and the counsell being debtors to the said Isobell in the sowme of ane thowsand ane hundreth and seven punds sexten schillings eight penneis, the legacie wes defalked of the said sowme, the superplus payit in to her executours, and the counsell became debtors to the colledge for the legacie of eight hundreth pund, conforme to ane Act of counsell of the fourt day of December, 1655. Item, mair resaved be the present thesaurer of this burgh fra Johne Lawder, present thesaurer of the colledge, the sowme of twa hundreth twa pund sex schillings eight penneis. All which soumes of money, mortified to the colledge as said is, and intromettit with be the counsell sen the verie first foundatioun of the colledge to this day, conforme to the severall Acts of counsell abone-mentionat, doe extend in the wholl to the sowme of thriescoir elleven thowsand pund Scottis money (71,000*l.* Scots.) The provest, baillies, and counsell, finding that the foresaid soume is a verie considerable pairt of the stocke mortifiet to the colledge as said is, and that they are bound in dewtie and conscience to pay annuelrent for the same for defraying of the burdens thairof; THAIRFOIR ordaines the thesaurers of this burgh to pay to the thesaurer of the colledge and his successors in his office yeirlie in all tyme comeing, the ordinarie annuelrent of the foresaid stocke of 71,000 punds Scots, and that at the four usuall termes of the yeir, Candlemes, Beltan, Lambes, and Hallowmes, be equall portiones being 1065 punds be yeir, beginnand the first quarteris payment at Candlemes nixt to cum: quhairanent thir presentis sall be thair warrand, declaireing alwayis that the infeftment given be the town and thesaurers of the colledge in Boningtoun milnes for the payment of the forsaid thowsand merkes be yeir sall now cease, because the principall soume left be umquhile Mr. Robert Johnstoun for maintenance of eight poor scholleris, being 12000 punds, is includit in the foirsaid soume of 71000 pund befoir mentionat; and ordaines the extract hereof under the subscriptioun of the commoun clerk of this burgh, or his depute to be als sufficient to the said colledge, as if the provest, baillies, dean of gild, thesaurer, counsell and deakens of craftis had subscrivit ane particular band to the said colledge thairanent, in ample forme.

4. EXTRACT from council-record, dated the 4th of February, 1659, bearing, that the sums due by the town to the college, of the sums of money mortified thereto since the foundation, amounted to the sum of 73,400*l.*—having, since the act 23rd January, 1656, become debtors to William Wauchope in 600 merks, and 3000 merks had increased on the mortification of Archibald Johnston. Patron heirs of A. J.—If not presented within 40 days, the council shall present.

5. EXTRACT Act of Council, dated 11th September, 1663, stating the amount of the mortifications by the above act, and mentioning that the council had since received and were due the mortification of John Trotter of Mortonhall, and Mr. Leighton's dotation, making the whole sum due to the college 75,732*l.* 13*s.* 4*d.* This document was found among the papers of the college in the town's hands.

6. EXTRACT Act of Council, dated 1st August, 1716, containing a memorial for renewing the security to the college for 20,600*l.* Scots, and continuing the previous bonds and mortifications to be cancelled to that amount.

7. Extract Act of Council, dated 31st July, 1717, renewing the bonds and mortifications to the extent of 29,000*l.*, with security over Lochbank, purchased from Robert Hepburne of Bearsford, and specifying the particular bonds and mortifications cancelled and included in this new bond.

8. Extract Act of Council, dated 3rd January, 1718, tranferring the rents of Lochbank, which had been appropriated to the payment of the interest of the above sum again to the town, and a new bond to be granted.

9. Extract Act of Council, dated 15th January, 1718, containing the bond granted in consequence of the above to the college treasurer.

10. Extract Act of Council, dated 5th February, 1718, authorizing the renewal of the debt to the college to the extent of 1450*l.* sterling, and narrating the particular bonds and mortifications to be discharged.

11. Extract Act of Council, dated 21st May, 1718, found among the papers of the college in the town's possession, narrating, that by the act 23rd January, 1656, the mortifications extended to the sum of 73,400*l.* Scots, but in the act of Council itself, they are said to amount only to 71,000*l.*, of which last sum only the town has accordingly paid interest to the college; therefore the difference between the said sums and the interest accumulated into a principal sum, making together 10,986*l.*; and a bond is appointed to be granted therefore to the college treasurer, and the interest thereof to be applied in all time coming towards the maintenance of the fabric of the college.

12. Extract Act of Council, dated the 1st of February, 1721, authorizing the renewal of bonds and mortifications to the extent of 1611*l.* sterling, and containing the particular bonds and mortifications cancelled.

13. Extract Act of Council, dated 4th September, 1723, authorizing the renewal of the securities to the college to the extent of 17,000*l.* Scots, and specifying the bonds and mortifications cancelled and discharged.

14. Extract Act of Council, dated 30th July, 1740, ordering that all these bonds should be discharged, and a new one granted.

15. Extract Act of Council, dated the 11th February, 1741, again ordering the accumulation of the whole in one bond, and pointing out the terms thereof.

16. Extract Act of Council, dated 18th March, 1741, bearing that the said new bond, amounting to 11,451*l.* 12*s.* 2⅔*d.* sterling, was presented in Council, read and signed, and ordered to be registered in the burgh-record.

University of Edinburgh.

Appendix. Order X*.

3 April, 1640.

There is likewise produced herewith a list of the bonds due by the city to the College of Edinburgh, from 1714 to 1739, which was found among the college papers in the town's hands, and after deducting one paid up (viz., that of Bailie Bryson of Dunbar, repaid to the presbytery), amounts to the net sum of the above bond granted by the town to the college, being 11,451*l*. 12*s*. 2⅔*d*.

Almost the whole of the remaining productions shall therefore be stated in the order of the several mortifications, as specified in the said bond of 1741, a copy of which bond is already in the hands of the Royal Commission, and is specially referred to, in the view of tracing their origin.

I. Mortification by Robert Brown, merchant in Zamose, Poland, 500*l*. sterling, for two bursars.

The book of Bursaries (which has been produced to the Royal Commission on a requisition in regard to bursaries, and is in this return specially referred to) page 206, contains the act of council 5th May, 1614; but there is herewith also produced an extract of the same act, found among the papers of the college in the town's possession, which must have been extracted at the period of its date. These contain the conditions of the mortification.

II. Mortifications by Sir James M'Lurge, 3000 merks Scots, for one bursar.

The book of Bursaries, page 220, contains a copy of the act of council of 13th May, 1715, and there is herewith produced an extract of the same act, found among the papers of the college in the town's hands. These contain the conditions of the mortification.

III. Mortification by William Tweedie, 2000*l*. Scots.

The act of council, a copy of which is herewith produced, dated 4th January, 1667, authorizes the college treasurer to receive 3000 merks, left by William Tweedie to the college. By act of council, 11th December, 1674, the treasurer of the city informs the council that the 3000 merks mortified by the late William Tweedie to the Regents of Humanity, which was due to him by the sheriff of Bute and his cautioners, and a decree obtained against the executors of Sir Thomas Nicolson and cautioners, were in his possession; but that Sir John Nicolson of that ilk was content to grant a new security, to which the council agreed, and appointed the treasurer to take the same.

IV. Mortification by Bishop Leighton, of 1800*l*. Scots, towards the maintenance of a bursar of divinity.

Ay act of council, dated 14th August, 1685, the town treasurer reported that he had received this sum, and is directed to charge himself therewith in his accounts.

By act of council, dated 25th September 1685, on the petition of the college treasurer, bearing that this sum had been mortified towards the maintenance of a bursar of divinity in the college, and that a bursar had been appointed thereto, and also that the said sum had been paid to the town treasurer, craving that a bond should be granted to him and his successors therefor. This was agreed to.

V. Mortification by J. Penman, of 1200*l*. Scots, for a bursar.

The terms of this mortification are contained in the acts of council, 29th August, 1688, and 18th October and 1st December, 1693, contained in the book of Bursaries, pages 131, 136, and 138. The deed of mortification is dated the 3rd June, 1678, and is recorded in the books of Council and Session, 6th March, 1683, so that an extract can be obtained if required. In the meantime there is produced the other acts of council in regard thereto, viz. act of council, 13th January, 1773—act of council, 26th April, 1815—and an act of council, 6th April, 1815.

VI. Mortification by James Nairne, of 4000*l*. Scots, for two bursars of divinity.

By act of council, dated the 18th March, 1685, a copy of which is herewith sent, it appears, that, in a petition given in by Charles Charters, merchant burgess of Edinburgh, mention is made, that by the latter will of the deceased Mr. James Nairne, wherein Mr. Charters is named his executor, he left the above sum to be mortified for the maintenance of two bursars of divinity, to which the professor of divinity should have the right of nomination—that part of the said sum had been paid—that he was ready to pay the remainder—and that the town should grant bond to the college treasurer to apply the same in manner, and for the use therein mentioned. The town authorized a bond to be granted accordingly. By act of council in the book of Bursaries, page 175, dated 9th March, 1694, the town agreed to take a bond from Bailie Charters, for part of the said mortification not then received, and to grant bond to the college treasurer for 4000*l*. of the said mortification. And again the act of council, dated 9th August, 1695, a copy of which is herewith sent, authorizes the bond granted by Charles Charters to be delivered to him upon payment of the balance of the amount.

VII. Mortification by John Bain, of 600*l*. Scots, for three bursars of divinity.

The act of council, 23rd August, 1695, copied into the book of Bursaries, page 187, contains the conditions of this mortification. The town have no other document on this subject.

VIII. Mortification by Sir Patrick Hepburne, of 1000*l*. Scots, for a bursar.

The act of council, 30th December, 1696, and the excerpt from the inventory on the 195 and 200 pages of the book of Bursaries, contain the conditions of this mortification.

There is produced herewith, an attested copy of the act of bursary and declarations in favour of Lord Aberuchill and Sir Patrick Aikenhead, found among the papers of the college in the town's hands, dated 26th December, 1696, upon their paying up the sum mortified, in consequence of it being impossible to recover it from the funds of Sir P. Hepburne.

IX. Mortification by James Pringle of Torwoodlie, of 1533*l*. 6*s*. 8*d*. Scots, for a bursar of divinity or philosophy.

In the book of Bursaries, page 79, a bond is alluded to as granted by Mr. Pringle to the town; a copy "double" of this bond, dated 28th November, 1694, is herewith produced, where the terms of the mortification of 100*l*. sterling are specified; and on page 181 of the said book of Bursaries, there is the act of council, 27th August, 1703, directing the same to be accumulated, with the annual rents that should happen to be resting at the time of the first presentation.

X. Mortification by Bailie Byrson of Dunbar, of 3066*l*. 13*s*. 4*d*. Scots.

The book of bursaries, page 202, contains the conditions of this mortification, which was under the management of the Presbytery of Dunbar. This mortification was, however, taken up and discharged on the 19th March, 1739, as will be seen by No. 17 of the productions herewith.

XI. Mortification by the lords of session, magistrates, advocates, and writers to the signet, of 3000*l*. Scots, for a professor and six bursars.

A copy of the extract contract among the above parties, dated 1st and 14th March, and 3rd May, 1648, and registered in the books of council and session the 1st of June thereafter, is herewith sent.

769
University of Edinburgh.

XII. Mortification by James Bannatyne, of 66*l.* 13*s.* 4*d.* Scots, for the use of the college.

The only article to be found, in regard to this mortification, is in the council records, 19th July, 1598, a copy of which is herewith sent.

XIII. Mortification by William Couper, of 66*l.* 13*s.* 4*d.* Scots, to help to maintain a student in the college.

The only article in regard to this mortification is to be found in the council records, 23rd December, 1607, a copy of which is herewith produced.

XIV. Mortification by the magistrates, ministers, and kirk-session, of 8100*l.* Scots.

There is transmitted herewith a copy of the contract among the above parties, dated 16th December, 1708.

XV. Mortification by Lord Lindsay, of 1333*l.* 6*s.* 8*d.* Scots.

The only act that can be found respecting this mortification is dated 22nd June, 1610, a copy of which accompanies this.

XVI. Mortification by Charles Sheirar, of 1000 merks Scots, one-half for entertainment of the regents, &c.

By act of council, dated 30th July, 1613 (not as erroneously stated in the bond 1617), a copy of which is herewith produced, the receipt of the above mortification is acknowledged, and the terms thereof specified.

XVII. Mortification by Isobel Allan or Alexander, of 133*l.* 6*s.* 8*d.* Scots, for a professor of divinity.

In the act of council, 17th November, 1658, recorded in the book of bursaries, page 82, will be found an explanation of this mortification. The commissioners are referred to No. L. of this return, as to the remainder of the sum therein specified.

XVIII. Mortification by Hugh Wight, of 1000 merks Scots, for a professor of divinity.

A copy of the act of council, 30th December, 1618, containing the conditions of this mortification, is sent herewith.

XIX. Mortification by Alexander Stobo, for the sustentation of a professor of divinity, of 300 merks Scots.

A copy of the act of council, 15th January, 1619, narrating this mortification accompanies this.

XX. Mortification by Archibald Johnstone, of 1000 merks Scots.

In the book of bursaries, pages 1 and 3, will be found the only information which can be found in regard to this mortification.

XXI. Mortification by Sir William Nisbet of the Dean, 1100*l.* Scots, for a professor of divinity.

A copy of the act of council, dated 2nd June, 1619, herewith sent, contains the conditions of this mortification.

By act of council, 20th April, 1621, the sum mortified is re-amassed to the amount above stated, and a bond granted therefor, as per copy act sent.

XXII. Mortification by Young and Barbara Robieson, of 100 merks Scots, for the college.

The only article regarding this mortification is contained in the act of council, 21st July, 1619, herewith sent.

XXIII. Mortification by William Rig, of 625 merks Scots, to help to maintain a professor of divinity.

A copy of the act of council, 23rd August, 1620, accompanies this, which contains the conditions of the mortification

XXIV. Mortification by Thomas Spears, of 1000 merks Scots, for a professor of divinity.

The accompanying copy act of council, 3rd January, 1621, contains the conditions, and all the information the town has as to this mortification.

XXV. Mortification by John Lawtie, of 100*l.* Scots, for the use of the college.

By act of council, a copy of which accompanies this, dated 19th July, 1622, the college treasurer is ordained to cause buy books to the library of said college, and to pay for the same.

XXVI. Mortification by Walter Balcanquhall, of 733*l.* 6*s.* 8*d.* Scots, to be employed for the sustentation of a professor of divinity.

The act of council, a copy of which accompanies this, dated 30th August, 1622, contains the conditions and amount of this mortification.

XXVII. Mortification by Isobel Brown, of 200*l.* Scots, for the use of a professor of divinity.

The act of council referred to in the bond, as bearing date 29th October, 1622, as the foundation of this bursary, must be erroneous, as there is none such in the council record, nor has it been possible to find the origin of this mortification.

XXVIII. Mortification by Margaret Stewart, of 200*l.* Scots, for the use of the college.

The act of council, 10th December, 1623, a copy of which accompanies this, contains the conditions of this mortification.

XXIX. Mortification by James Ainslie, of 333*l.* 6*s.* 8*d.* Scots, for maintenance of a professor of divinity.

The act of council, 16th January, 1624, contains the conditions of this mortification, and a copy accompanies this.

XXX. Mortification by Michael Finlay, of 320*l.* Scots.

The date of this mortification is not given in the bond, and it has not been found in the council record.

XXXI. Mortification by Margaret Yule, of 333*l.* 6*s.* 8*d.* Scots.

A copy of the act of council, of date 23rd June, 1624, is herewith transmitted, by which the Royal Commission will observe, that the town having supposed that a sum of money had been left by the deceased Alexander Yule, sometime schoolmaster in Stirling, had insisted for production of his settlement; but finding the said legacy noways profitable, but rather burdensome to the town, they discharged the same; but that Margaret Yule had thereafter paid over a sum to the treasurer for the use of the college.

XXXII. Mortification by Margaret Couper, relict of James Masterton, of 333*l.* 6*s.* 8*d.* Scots, for the sustentation of a bursar within the college.

University of Edinburgh.

Appendix. Order X*.

3 April, 1640.

The act of council, 9th November, 1625, contains the conditions of the mortification, and a copy of it is herewith sent. There is also sent copy renunciation by Jean Murray, grand-daughter and heir of James Masterton, with the special advice and consent of James Watson her husband, whereby they renounce their right of patronage of the said bursary, in favour of the town, dated 8th November, 1625; and also copy judicial ratification of the said renunciation, of the same date.

XXXIII. Mortification by Hugh Wight, of 333*l.* 6*s.* 8*d.* Scots, for a bursar.

The act of council, 4th January, 1626, contains the conditions of this mortification, and will be found in the book of bursaries, page 15. There is also sent herewith copy renunciation of the patronage of this bursary by David M'Call, as having right, under the testament of the said Hugh Wight, in favour of the provost, baillies, and counsell, dated 31st December, 1625, copied from the original in the possession of the town.

XXXIV. Mortification by Charles Shearer, of 666*l.* 13*s.* 4*d.* Scots, for a professor of divinity.

The act of council 29th December, 1630, contains the conditions of this mortification, and a copy of it is herewith sent.

XXXV. Mortification by John Byers, of 200*l.* Scots, for the use of the college.

The conditions of this mortification are contained in an act of council, 18th January, 1632, a copy of which accompanies this.

XXXVI. Mortification by Patrick Eleis, elder and younger, of 666*l.* 13*s.* 4*d.* Scots, for a professor of Divinity.

The act of council, dated 14th February, 1634, specifies the conditions of this mortification, and a copy of it is sent herewith.

XXXVII. Mortification by Thomas Muir, of 66*l.* 13*s.* 4*d.* Scots for a bursar.

This mortification is established by the act of council, 6th January, 1636; see book of Bursaries, p. 19.

XXXVIII. Mortification by Bartholomew Sommerville, of 26,000 merks, Scots, 20,000 whereof to entertain a professor of divinity, and 6000 for building a house to him.

There is sent herewith copy act of council, dated 17th December, 1639, bearing the payment and terms of this mortification, and ordaining a bond to be granted therefor by William Dick.

Also copy act of council, 1st May, 1640, stating the giving up of the bond by William Dick for 26,000 merks, Scots, to be delivered to the college treasurer.

Also copy act of council, authorizing the purchase of a house which belonged to Sir James Skene, of Curriehill, for the professor of divinity, &c., dated 11th August, 1641.

The disposition of this house, by Samuel Johnston of Schenes, to the provost and magistrates, is dated 10th December, 1642, and registered in the burgh court-books 2nd June, 1648.

Also act of council, narrating the disposal of the said house, and that a house for the professor of divinity, should be built within the precincts of the college, and agreeing to the disposition presented to them thereof, in the haill heads, articles, and clauses thereof, and ordaining the execution of the same with the masters and members of the college, and others, consenters thereto, dated 21st May, 1656.

Also copy registered discharge by Alexander Sommerville to the town, dated 9th September, and registered in the burgh court-books, 3rd November, 1714, wherein he narrates having raised an action against the town-council for misapplication *inter alia* of the said sums, and for repetition thereof to him as heir of the said Bartholomew Sommerville, and which discharge proceeds thus:—"And now seeing and being sufficiently informed that the said mortified sums were applied to the ends and uses for which they were destinat by the said mortification, and that I have made all enquiry thereanent in prosecuting the same in several processes, and can make appear no misapplication, so that I ought not farther to quarrel their management;" therefore he discharges the said process.

The commission are requested to notice, that in the act of council, dated 7th September, 1789, appointing Dr. Andrew Hunter professor of divinity, which is already in the possession of the royal commission, there is this clause:—"Reserving always, like as the magistrates and council do reserve to themselves and successors in office, full power and liberty to take down the whole or any part of the said house or lodging that may be found necessary, in order to the making a new street for the city's improvement."

The South Bridge act was passed in 1785, authorizing the commissioners therein appointed to obtain the necessary ground. The new college was commenced in 1789, to be built by subscription, and the trustees for the management thereof, on the 18th November, 1789, ordered the professor of divinity's house to be pulled down, in order that the foundations might be dug; and on the 8th March, 1790, Dr. Hunter was allowed by the said trustees, on his own application, 25*l.* per annum for house-rent, which was paid by the said trust, so long as they had money, and has since continued to be paid by the town, as may be seen by their accounts.

Note.—The Lord Provost has been thus particular on this part of the Return, in consequence of reported allegations that this mortification, so far at least as the professor of divinity's house is concerned, had been misapplied, or the same improperly alienated.

XXXIX. Mortification by David M'Call, of 800*l.* Scots.

In the book of Bursaries, page 21, is the act of council, 18th December, 1639, narrating the delivery of the mortification, and containing the deed itself; a copy of that act taken from the records, with the deed engrossed, is also herewith produced: and there is likewise sent a copy of the mortification, dated 2nd August, 1639, copied from the original, found amongst the college papers in the possession of the town.

XL. Mortification by Alexander Wright, of 3333*l.* 6*s.* 8*d.* Scots.

There is herewith produced a copy of the assignation by Alexander Wright, dated 13th, and registered in the burgh court-books, 14th July, 1640, which contains the conditions of this mortification, pages 23-4.

Also copy act of council, dated 1st May, 1640, mentioning the above assignation, and that the bonds therein assigned were delivered into the hands of John Trotter younger, and John Jossie, treasurer to the college; and copy act of council, narrating the recovery of a bond assigned by the above assignation, one half of which amounts to the sum of 3333*l.* 6*s.* 8*d.* Scots, as applicable to the use of the college in terms of the assignation.

771
University of Edinburgh.

XLI. Mortification by James Dalgleish of 4666*l.* 13*s.* 4*d.* Scots.

The act of council, 6th January, 1640, contains the conditions of this mortification, and a copy of it is therefore herewith sent: This mentions the assignation of a bond by Adam Hepburne for the above sum. There is also sent herewith copy instrument of intimation of the above assignation, found among the papers of the college in the town's hands, dated 3d April, 1640.

XLII. Mortification by James Dalgleish of 2666*l.* 13*s.* 4*d.* Scots.

The act of council contained in the book of Bursaries, page 45, and dated 24th May, 1644, contains the conditions of this mortification.

XLIII. Mortification by William Struthers of 2000*l.* Scots.

A copy of the act of council, dated 3rd January, 1645, is sent herewith. It contains the object of this mortification. The acts of council of 28th December, 1653, and 8th February, 1654, contained in the 66th and 70th pages of the book of Bursaries, also contain information in regard to this mortification.

XLIV. Mortification by Robert Johnston, of 12,000*l.* Scots, for the entertainment of poor scholars.

The acts of council, 26th February, 1640, 5th and 14th March, and 3rd September, 1656, in the book of Bursaries, pages 24, 35, 36, and 38, contain the conditions of this mortification, and some particulars. The act of council, 13th October, 1641, herewith sent, also contains an explanation, that in respect there was no possibility of purchasing land so as to produce the annual rent required, the money was agreed to be invested in the hands of the town.

XLV. Mortification by Sir John Buchanan, of 7560*l.* Scots, for training able spirits after their laureation and studies.

By the act of council, dated 22d July, 1646, the amount and application of this mortification are specified. A copy is therefore herewith sent.

In an inventory of the papers of the college, dated 29th January, 1662, there are the following entries—

1. "*Imprimis*, ane contract of mortification betwixt Sir John Buchanan of that ilk, and the good toun of Edinburgh, for the vse of the colledge yairof, daited at Edinburgh, 5th November, 1649, registrat in the buikis of counsell and sessioun, 20th December, yairefter."

2. "Band of relief be Dame Marie Stewart Countess Dowager of Mar, and John Erskin, her sone, as cautioner to Mr. George Monargan, her servand, biring date at Stirling, the penult day of December, 1639 yeirs."

3. "Horning and poynding George Jossie, theasurer of the college, contrar Sir John and Mr. Wm. Erskins, 4 April, 1650."

4. "Item, Horning and poynding renewed againes them be David M'Gill, thesaurer, the 26th January, 1663, with the executions yairof duelie registrat, upon the first Julij, the said yeir."

5. "Item, Supplication David M'Gill, thesaurer, aganis Sir John Erskin, with ane delyverance on the back, daittit 22 February, 1653."

6. "Two copies of two instruments of seasine; the one of ane annualrent of two thousand merks out of the landis and lordship of Alloway, to Sir John Erskine, daited 20 May, 1631; the other of ane annualrent of 1600 merkis, to be lifted be him out of the saids lands, bearing date 17 Julij, 1642."

7. "Decreit of apprysing, David M'Gill, theasurer foirsaid, aganis the said Sir John Ersken, daittit 16 July, 1653, allowed the 18th day of the said moneth."

8. "Chairge David M'Gill thesaurer, chairging the Earle of Marr, superior of the anualrent abone specifiet, to infeft, with the messenger's execution, daitted 24th Julij and 12 August, 1653, respective."

9. "Captione David M'Gill aganes Sir John Arskin, 26th July, 1653."

10. "Defence for the Colledge of Edinburgh and David M'Gill yair, the samen contra Sir John Arskin, 20th December, 1653.

11. "Decreit of preference upon a multiple poynding raised by the tennants of Alloway aganis the Countesse of Marr, Sir John Arskine, and severall other creditors of the Earle of Marr, daittid 19 January, 1656."

12. "Information for the creditors of Sir John Arsken, contra Dame Margaret Inglis his relict, 9 December, 1657."

13. "Information for the Lady Atterstoun and the creditors of Sir John Ersken, contra Sir Charles Ersken, 2nd July, 1658."

By the act of council, dated 26th January, 1676, the council "appoints Bailie Dick, the Dean of Gild, and Bailie Boyd, to speak with the Earle of Marr anent the comprising upon his Lordship's lands, whereunto the college has right by a mortification of the laird of Buchanan, and to report."

By act of council, 26th July, 1676, the committee appointed, reported that they had met with him, and settled for 6000 merks, to be paid at Whitsunday, 1677, and that his lordship had given bond therefor, of which the council approved, and authorized delivery of former security.

It thus appears that the mortification of Buchanan was in part at least an assignation to a debt due by the Earl of Mar, for which see No. LVII.

XLVI. Mortification by Alexander Mitchell, W.S., of 116*l.* 13*s.* 4*d.* sterling, for a Bursar of Philosophy.

In the book of Bursaries, page 226, will be found a copy of the act of council, 26th June, 1723, containing the conditions of this mortification. An extract of that act, found amongst the college papers in the possession of the town, also accompanies this.

XLVII. Mortification by Alexander Wright, of 2381*l.* Scots.

The Royal Commission are referred to the assignation produced with No. XL., and there is herewith sent a copy of the act of council, 24th August, 1642, explanatory of the sum in this article, which is a moiety of Gilbert Mowat and cautioner's bond per 3999*l.* 19*s.* 9*d.*, left equally between the college and kirk treasurer, as stated in the bond 1741.

XLVIII. Mortification by Isobel Richardson, of 800*l.* Scots, to the college.

The act of council, 14th December, 1655, makes mention of this mortification, which is all the information that the town have.

XLIX. Mortification by John Lauder, of 202*l.* 6*s.* 8*d.* Scots.

In the act of council, 23rd January, 1656, transmitted with this Return (No. 3), this mortification is mentioned, which is all the town know of it.

University of Edinburgh.

Appendix. Order X*.

3 April, 1640.

L. Mortification by William Wauchope, of 400*l.* Scots, said to be act of council, 1st July, 1657.

A copy of this act accompanies this Return, but it does not show that the sum specified appertained to the college.

The Royal Commission are referred to act of council, 17th November, 1658, recorded in the book of Bursaries, page 82, in regard to the mortification by Isobel Allan, relict of David Alexander, No. XVII. of this Return, wherein the above sum due by William Wauchope is specified as part of 1000 merks left by the said David Alexander for the help and support of bursars and poor scholars within the college, whereof 400 merks are paid by the said Isobel Allan or Alexander to account thereof.

LI. Mortification by Archibald Johnston, of 2000*l.* Scots, for the maintenance of two bursars—See book of Bursaries, page 3, where the act of council, 29th January, 1658, explains this mortification.

LII. Mortification by John Trotter, of Mortonhall, of 1081*l.* 6*s.* 8*d.* Scots, for a bursar.

The act of council, 6th March, 1663, which is contained in the book of Bursaries, page 91, explains this mortification, to which the Royal Commission are referred.

It will be seen, in the latter part of this act, that certain houses and acres in Dunse were not then secured to the college, "but that the council are to accept of ane security yairof, or of the equivalent stock for annuelrent to be paid into the college yearlie, being 48*l.* be the year, furth of the money due by the good town to the said John Trotter."

That by act of council, a copy of which is herewith sent, dated 10th April, 1663, bonds were granted by the town to the hospital at the foot of Leith Wynd, and to the college, for Mortonhall's legacies, and a discharge prepared to Mortonhall thereof, and a discharge by Mortonhall to the town, of the principal sums and annualrent preceding Martinmas then last. The act of council, 6th May, 1664, accumulates the annualrent of the above mortification, and the maill of the houses and acres in Dunse, and allots the same for the maintenance of two bursars; and a copy is herewith produced.

LIII. Mortification by Bishop Leighton, of 1251*l.* 6*s.* 8*d.* Scots.

The act of council, 7th August, 1663, explains this mortification. It is engrossed in the book of Bursaries, page 100.

LIV. Mortification by Hector Foord, of 8000*l.* Scots, for six bursars.

The act of council, 19th November, 1686, contained in the book of Bursaries, contains the particulars of this mortification. There is also transmitted herewith a copy of the registered mortification itself, dated 26th March, 1678, and registered in the burgh court-books, 16th April, 1679.

LV. Mortification by William Wardrobe, for a Bursar of Philosophy or Divinity, 2000 merks Scots.

By act of council, 30th June, 1725, the conditions of this mortification are specified. This act is copied in the book of Bursaries, page 257, and on page 264 there is an explanation thereof. An extract of the act of council, 30th June, 1725, found among the college papers in the town's hands, is also herewith sent.

LVI. Mortification by William Hogg, of 2000*l.* Scots.

The bond refers to an act of council, dated 12th November, 1729, a copy of which is herewith sent, which it will be seen authorizes the loan of 2000*l.* from the college treasurer, William Hogg; and the Honourable Commissioners are requested to turn to pages 242 and 245 of the record of Bursaries, containing the acts of council 25th September, 1724, and 4th January, 1727, whereby it will be seen that a mortification of 2000*l.*, left by David Christie, periwigmaker in Edinburgh, was paid to William Hogg.

LVII. Mortification by Lord Dun and Mr. Erskine of Grange, of 514*l.* sterling.

The Royal Commission are referred to the documents and observations on Buchanan's mortification, No. XLV.

By act of council, 6th June, 1716, an extract of which found among the papers of the college in the hands of the town, is herewith sent,—the council, considering that the Earl of Mar is due to the college of this city a considerable sum of money, and that there is application made to the Lords of Council and Session for appointing a factor upon the said Earl's estate, they appointed the college treasurer to subscribe the same. By act 13th January, 1736, a copy of which is sent herewith, the council, considering that the college treasurer did pay into the city's cash account with the Royal Bank, the sum of 513*l.* 18*s.* 11*d.*, being the principal sum paid up by Lord Dun and Mr. Erskine, of Grange, to the college, and that he also paid in 1*s.* 1*d.* more to make the sum complete 514*l.*; therefore they granted bond for the said sum to the college treasurer. The principal bond of the same date, found amongst the college papers in the town's possession, is herewith produced, having a marking on the back, "Earle of Marr's debt or mortificatioun."

LVIII. Mortification by Sir Andrew Ramsay, of 555*l.* 11*s.* 1⅓*d.* sterling.

In the book of Bursaries, page 158, is engrossed, from the inventory of the city, the purport of the latter will and testament of Sir Andrew Ramsay, of Abbotshall. The deed itself is now partly lost, but there is little doubt of the statement there given being correct. On pages 162, 165, and 168, are other entries explanatory of this mortification, and there is sent herewith an extract act of council, appointing a bond to be made out to Patrick Manderston, the college treasurer, for 555*l.* 11*s.* 1⅓*d.*, being the 10,000 merks mortified by Sir A. Ramsay to the college, dated 13th December, 1738.

This mortification, it will be seen, is precisely the amount of the sums standing in the list of Bursaries, as mortified by Mr. Andrew Ramsay and Sir Andrew Ramsay.

The Lord Provost has thus endeavoured to give every explanation in regard to the several mortifications specified in the Bond 1741, and to produce copies of such original mortifications or other documents as contained any information in regard to the terms of these several mortifications, as the shortness of the time would allow.

There appear to be a few other mortifications alluded to in the several documents, in regard to which some explanation may be expected, and these the Lord Provost shall now endeavour to give.

Mortification by Sir Thomas Hope, of 1000*l.* Scots, the annualrent thereof, with the yearly maill of the two chambers built by him, to be applied to the entertainment of two bursars, per act of council, 7th January, 1653.

This act is contained in the book of Bursaries, page 60, but the mortification is not included in the bond of mortifications 1741, nor is there any appearance of its ever having been acted on. It is therefore to be presumed that it must have been recalled or otherwise compensated.

773
University of Edinburgh.
Appendix. Order X*.
3 April, 1640.

Mortification by Andrew Beattie.

By act of council, dated 12th October, 1644, in the book of Bursaries, p. 51, it appears that the deceased Andrew Beattie, by his latter will, bequeathed *inter alia* (subject to the liferent of his widow) 1000 merks Scots for the entertainment of a bursar within the college of Edinburgh; and that the widow, having assigned the town into bonds to that amount, they bound themselves to pay her the annualrent, and ordained the treasurer to uplift the sums in the bonds assigned. By act of council herewith produced, dated 19th June, 1646, the council ordains the college treasurer to pay the annualrent of the said sum to the widow of the said Andrew Beattie. There is also produced an act of council, dated 8th April, 1659, bearing that the widow having died, her executor should be settled with, so that they might obtain a title to pursue for the bonds assigned, she only having intromitted with her husband's effects, and not been decerned executor. By act of council, 6th February, 1680, a bond due by and Hugh Kerr his cautioner, for the sum of 100*l.* Scots, being considered a desperate debt, the council granted a warrant to see if any part could be recovered from the cautioner.

It seems very doubtful, therefore, whether any part of this mortification was made effectual.

In the inventory of the college writs before mentioned, dated 29th January, 1662, it appears that the assignation by Alison Skirving, relict of Andrew Beattie, was dated 16th October, 1644, and registered in the burgh court-books upon the 17th of the said month.

That there was a bond by Alexander King of Woodhall, and John King his son as principals, and James Stirling, merchant burgess of Edinburgh, as cautioner, to the deceased Andrew Beattie, for 100*l.* Scots, with interest from Martinmas, 1636, dated the 17th of February of that year. Also a bond by Francis Hay of Arrol as principal, and Thomas Hay of Park, and Gilbert M'Lellan, skinner in Edinburgh, as cautioners, for 300 merks Scots, with interest from the date thereof, which is the 27th July, 1642, registered the last day of June, 1655. Another bond by Alexander Cullen, tailor, burgess of Edinburgh, as principal, for 100*l.* Scots, bearing date 9th February, 1644. Another bond by Janet Masterton, relict of umquhile John Dickson, merchant burgess of Edinburgh, as principal, and Hugh Kerr, parson of Lynn, as cautioner, to the said Andrew Beattie, for the sum of 100*l.*, dated the 29th December, 1640, and registered 30th June, 1655.

Mortification by Robert Deniston.

This mortification is stated in the book of Bursaries page 43, as contained in act of council 10th March, 1643; but as it is not noticed in any of the bonds as due by the town, or otherwise noticed in the council records, it is supposed that it must have been taken charge of entirely by the college-treasurer, to whom it was paid, and that it has probably been incorporated with some of the larger mortifications, as was occasionally done. No farther notice is taken of it however in the council records.

Mortification by David Junkens.

By act of council contained in the book of Bursaries, page 79, it appears that Bailie Junkens or Jenkins, had bequeathed a legacy of 1000*l.* for the use and maintenance of a bursar of divinity, but that his testament being exhausted, the council agreed to accept of a bond for 1000*l.* merks Scots, superseding execution for seven years. By act of council dated 13th February, 1661, herewith produced, the council accepted of a bond granted by John Crawfurd for the said 1000 merks Scots, which was put under the charge of the college-treasurer. This mortification is still amongst the list of bursaries paid by the town.

Mortification by John M'Morrain.

By act of council in the book of Bursaries, dated 18th June, 1673, it appears that John M'Morrain had paid the legacy of 1000 merks Scots for the maintenance of a bursar of philosophy, and the treasurer is ordained to pay the annualrent for the maintenance of the said bursary at the usual terms. By act of council, a copy of which is herewith sent, dated 15th December, 1671, this sum is stated to have been bequeathed by Jacob Barron, and the conditions of the mortification are particularly specified. This bursary is still in existence, the town paying the amount of the annualrent of the mortification to a bursar.

Mortification by Little of Libberton.

This mortification is noticed in the book of Bursaries, page 145, and which states that there was a decree obtained before the Court of Session in regard thereto, of date 22nd January, 1691. A copy of the said decree is produced herewith, by which it will appear that the defender, and the heir of entail of the estate of Libberton, were ordained to pay the sum of 60*l.* Scots yearly in all time thereafter for the maintenance of a bursar to the college of Edinburgh, who is to be presented from time to time by the said heirs; and one bursar is only to have the benefit thereof during his four years' course of philosophy in the said colledge, and then another to be presented from time to time at the end of every four years, or as it happens to vaik by death or otherwise, as the right of taillie, dated 17th May, 1682, at more length contains.

This bursary, it is believed, has been regularly kept up.

Mortification by William Rig, Esq. of Athernie.

According to the book of Bursaries, page 58, it appears, by an act of council dated 6th June, 1649, that a legacy of 5000 merks Scots was appointed to be delivered to the town of Edinburgh for the maintenance of four bursars within their college, they being presented by the said William Rig, his heirs and successors, being young men of hopeful expectation; the town being obliged to pay to every one of them yearly the sum of 100 merks Scots; and the council ordained all possible means to be used for getting payment of the said sum, seeing the same lies unprofitable, and the will of the defunct disappointed.

It does not appear that the town council ever recovered any part of this mortification. By the inventory, dated 29th January, 1662, it appears that an inhibition and arrestment was used at the instance of John Lauder, treasurer of the college, against Thomas Rig of Arthernie, of date 21st August, 1655, and which was executed on the 5th and 7th September of that year, and registered in the general register on the 8th October following—and an arrestment was used in the hands of Robert Dalgleish and Smeaton Hepburn, 3rd September, 1655, and 17th January, 1656. In the same inventory there is also an intimation of loosing of the arrestment in the hands of Smeaton Hepburn, dated 27th February, 1657,—also a summons at the instance of the college treasurer, against the provost, bailies, council and kirk-session of the town of Dumbarton, and also against Thomas Rig of Athernie, and act of litis contestation therein, dated 24th February, 1659, with a summons of wakening

University of Edinburgh.

Appendix. Order X.*

3 April, 1840.

raised thereon, dated 1st January, 1662; but it does not appear, that with all the steps taken, any sum whatever was recovered.

Mortification by Mausie Weir.

By the book of Bursaries, page 39, it appears that there is an act of council, dated 25th February, 1642, narrating, that the said Mausie Weir, relict of Richard Dobie, merchant, and sometime Dean of Guild, had left in legacy, by her latter will and testament, the sum of 1000 merks Scots, to be employed for the entertainment of two bursars within the college,—the annualrent of which sum, Charles Hamilton, one of her executors, had employed to the said use, and that the said deceased Charles Hamilton having left in his will and testament the said sum, to be employed to the use of the said college, compeared Mr. John Charters, who declared that he had paid the annualrent of the said sum for the said uses, and also delivered the said 1000 merks to the treasurer of the college; therefore the council discharged the executors of the said Mausie Weir, and ordained the treasurer to give out the same, that the profit thereof may be applied to such use of the said college as thereafter should be condescended upon by the rector and principal of the college.—This bursary is still acted on.

Besides these, which are all noticed in the book of Bursaries, the town-council, by act bearing date 22nd February, 1609, upon the narrative of having had especial care and regard that the youth may be instructed and brought up in godliness and learning, in the college lately planted by the good town in the Kirk of Field, and for helping a competent rent to be paid to the entertainment, use, and furtherance of that good purpose; and to give others occasion to do the like, thought expedient to doit and mortify, give and dispone, like as they thereby doited, mortified, gave and disponed, the yearly profit and casualties of the public mortcloth of this burgh, gotten fra such persons as require the same to their burials,—to the use and entertainment of the said college, and members thereof, in all time coming, to be uplifted, collected, and inbrought by the persons to be deputed by the provost, bailies, and councill of this burgh for that end, upon count, reckoning, and payment, to be made thereof to the said provost, bailies, and council, to the use of the said college yearly.

Mortification by Thomas Fraser.

A copy of Mr. Fraser's settlement will be found in the book of Bursaries, after the Index.

There is herewith produced a copy of the act of council, 21st September, 1768, containing the particulars of this bequest. A memorial for the opinion of counsel, and the opinion thereon, and another act of council dated 7th December, 1768, narrating the acceptance of the bequest, and the signature of a bond for the principal sum payable to the trustees of the said Thomas Fraser, or a quorum.

Mortification, George Heriot.

All that is known by the town in regard to this, is stated in the book of Bursaries, p. 272-281.

Mortification, James Stewart.

This settlement is also in the book of Bursaries, page 35, after the Index. 603*l.* was paid to the city-chamberlain, 4th April, 1811.

King William's Mortification.

This will be found in the book of Bursaries, page 172; and on page 266 will be found an act dated 1753, in regard thereto, directing the college treasurer to insist upon this mortification being paid over to the town for behoof of the bursars; notwithstanding which, it is believed that it has ever since been paid at exchequer to the bursars themselves.

Mortification by Robert Murray.

This mortification is only noticed in the list of mortifications in Maitland's History, as dated 14th March, 1655, and is said to amount to 3571 merks Scots.

Amongst the mortifications contained in the bond 1741, the Royal Commission will observe one upon the assignation of Alexander Wright; and upon turning to the 37th Mortification, specified in the act of council 23rd January, 1656, it will be found that one of the sums assigned by Alexander Wright is contained in a bond by Gilbert Mowat and his cautioners, per 3399*l.* 19*s.* 9*d.* Scots, and that it was so disposed to *Robert Murray* in satisfaction to him of certain sums due by the town to him: and that *pro tanto*, the college part in principal and annual rent (that is of the sum therein mentioned, assigned by Alexander Wright) extends to 2381*l.* Scots, just the amount of 3571 merks Scots, specified as the amount of the mortification), and the town became debtors to the college for the payment thereof, conform to an act of council of 14*th March*, 1655.

It will be observed, too, upon reference to No. XLVII., being that by Alexander Wright, of the mortifications contained in the bond 1741, that the act of council therein referred to, 24th August, 1642, refers to this very debt, and is of the precise same amount.

Upon the whole, therefore, it is clear that this mortification is erroneously stated in Maitland as that of Robert Murray, it being evidently a part of the mortification of Alexander Wright.

The most anxious search has been made for the original deeds of mortification, but from the terms of the minutes of council, it would appear very few of these ever found their way into the town's hands—the narrative of the different minutes recording the mortifications proceeding generally upon a statement of the wishes of the mortifier, and the payment of the money, or granting bond for the amount, as was more commonly the case.

Copies of all those that could be found have been produced, and the best information that could be procured from the records, in regard to the others, has been taken; but from the difficulty of perusing the records of those early dates, and the number of entries, it is not improbable that there may be omissions. The excerpts that are sent, however, have been carefully collated with the original books and papers.

(Signed) Carlyle Bell, *Conjunct Clerk.*

ORDER X**.—Whether the Kirk-Lands that came into the Possession of the Town of Edinburgh on the Suppression of the different Religious Houses, had been feued out before or after the Grant; and, for that Purpose, to make a Search in the Town's Chartularies, or in those of the Religious Houses to which the Lands formerly belonged.

Return by the Town Council.

The oldest record of charters in the possession of the town of Edinburgh, is without a title, but the latter part of the book bears the following:—"Registrum Collegii Sanctæ Trinitatis prope Edinburgh per Dominum Patricium Spruylle Sacristanum, anno Domini 1562." The first entry, however, in this book, bears date 9th January, 1503, and the last 12th July, 1594.

The next book is titled "A Register of all Few Charteris of the Kirk-lands within and without the Burgh of Edinburgh, now haldan of the Provest, Baillies, and Counsall of the said Burgh, and of all Taks of Teynds."

The first charter in this book is dated 31st August, 1549, and the last 1st July, 1623; but throughout the book there are charters of more early date, apparently copies retained, when the renewals of the investiture were granted.

Besides the above, the town of Edinburgh's first charter-book, commencing in 1580, and ending in 1619, and the first regular chartulary of principal writings granted by the magistrates, commencing 1615, and ending 1660, have been examined, to ascertain if any charters of kirk-lands were inserted therein.

In conformity with the wish expressed by the Commissioners, the reporter begs leave to present the result of his search in these records in a tabular form, and to give, in an Appendix. (*N. B. This enumeration of charters and other deeds is not printed*) a short abstract of the entry, upon the authority of which the lands or other subjects are set down as having been feued out before or after they came into the possession of the town of Edinburgh; and although the books above mentioned contain various renewals of the investitures of the lands, it has been thought sufficient, in general, to refer to the first entry, whether an original charter or a renewal, that clearly ascertains the point.

Order X*.**—To make a search for and produce the Minutes of the Kirk Council, as far as they may be found.

Return by the Town Council.

A book entitled Minutes of Edinburgh Kirk Council, commencing the 21st October 1625, and ending, incomplete, 5th August 1657, was lately found in arranging the books in the session clerk's office. It is now produced. The reporter is not aware of the existence of any more of these minutes and none have been found in any search hitherto made.

The most material entry as to the Revenue of the College, is the following:—

Extract from Minutes of Kirk Council, 20th Junij, 1640.

20th Junij, 1640.

Conveined B. Suittie, D. Cochrane, C. Reid, Trotter Mikiljohne. Compeired Johne Trotter, thesaurer, and produced the wreatts and evidents underwritten, perteining to the Colledge of this burgh, of the rents, annuities, and few-dewties yairin mentionat, viz. Thomas Craig, his valuatione of the dewties of Richartoune, Malcomstoune, Cocklaw, and Burnewynd, Over and Nether Currie perteaning heretablie to him, according to the aggrement past betwixt the said Thomas Johne Smyth and Stephan Boyd, lait thesaurer of the said rents, the teinds being valuat, condescendit, calculat, and allowed be ay^r^ of theme, according to the said Stephan his severall dischairges yairof, the valued dewtie yairof extending yeirlie to the soume of 181 lib, togither also with ane tak dewtie of 17 lib. 10 s. yeirlie; quhilk tak doeth not expyre till Beltane 1647: *Item*, the valuatione of Butland, Over and Nether Currie, with Tempel-land and Butland-hill, and of the lands of Wester Lumphoy, thau pertyning to Lawrence Scott of Clarkingtoune: *Item*, the valuation of Eister Lumphoy, sumetyme pertyning to James Hamiltoune of Kilbrackmonth, now pertyning to Mr. Williame Scott of Clarkingtoune: *Item*, the valuatione of the lands of Warrestoune, now pertyning to Mr. Ar^d^. Jonstoune: *Item*, the valuatione of the lands of Little Currie, pertyning to umquhile Mr. Matthew Lichtoune, and now to his sone: *Item*, the valuatione of the lands of Reidhews, pertyning to Mr. Johne Young: *Item*, the valuatione of the lands of Kirkhill, pertyning to Sir Lwes Lawder: *Item*, the valuatione of the lands of Kilbabertoune, pertyning to umquhile Sir James Murray, Mr. of work: *Item*, the valuatione of the land of Birney and Harlaw, pertyning to James Stirling: *Item*, the valuatione of the lands of Killeyith, pertyning to the airs of umquhile Gilbert Kirkwod of Pilrig: *Item*, the valuatione of the lands of Langhermestoune, sometyme pertyning to umquhile Thomas Fleymeing, now pertyning to Williame Murray: *Item*, the valuatione of the lands of Ballenye, Over and Nether Currie, with the brew-lands of Currie, pertyning to James Hamiltoune of Kilbrackmonth: *Item*, the valuatione of the lands pertyning to the Lord Forrester of Corstorphin: *Item*, the valuatione of the lands of Quhelpsyd, pertyning to Adame Bothwell: *Item*, the valuatione of the lands of Pilmore and Ravelrig, pertyning to Sir Johne Murray, and now to Sir Johne Wauchop of Niddrie: *Item*, the valuatione of the lands of Curriehill, somtyme pertyning to Sir James Skeine, Knicht Barronet, and now to Mr. Samuell Johnstoune of Scheynes, Advocat: *Item*, the valuatione of the lands of Cockburne, somtyme pertyning to Lyndsay of Covingtoune: *Item*, the decreit of augmentatione of the Kirk of Currie, in favor of Mr. Johne Chairtour: *Item*, the valuatione of the lands of Nether Bynnie, pertyning to Johne Cuninghame and Wm. Nisbet, portioneirs yairof: *Item*, the valuatione of the Brewlands of Currie, pertyning to Johne Hamiltoun of Currie, James Quhytheid and Mathew Fynlasone, according to the valuatione: *Item*, ane decreit upone the modifyet stipend of the Minister of Kirkurd: *Item*, ane regrat tak of James Brounes of Quhelpsyd: *Item*, ane tak of Thomas Bailzies of Polkemmet and his cautioner of the vicarage teynds of the Kirk of Levingston, dated the 1st and 3d of Junij 1625: *Item*, ane contract betwixt the good toun and James Stirling, anent the personage and vicarage teinds of the lands of Byrnie and of Harlaw, daited at Edinburt the of Merch 1638: *Item*, ane regrat tak of James Hamiltoun of Kilbrackmonth: *Item*, ane minute of the taks and yair daits: *Item*, ane bill with ane warrand of surceis of all executioun of law againe teinds in generall belonging to the good toun: *Item*, twa acts of counsell, ane forbidding any seasing to be gevin till all ground annuells be first payit, the uther ordaineing no grasome to be taken: *Item*, ane number of rentalls gevin in be the gentrie of the vicarage teinds of the Kirk of Levingstoun: *Item*, ane aggrement betwixt Stevin Boyd and Johne Cunynghame for ane constant pryce of all teind bolls in the parochin of Currie to stand constant: Quhilk wreatts abone writtin, wer instantlie delyverit to John Jowssie, present thesaurer of the said colledge, quhairupon the said John Trotter askit acts and instruments, and ordaine the said John Jowssie to be chairged yairwith in his accompts.

20 June, 1640.

University of Edinburgh.

Appendix. Order X****.

ORDER X****.—To report as to the Site of the High School, and to whom the Ground on which it stands anciently pertained.

Return by the Town Council.

By an act of council, a copy of which is herewith produced, bearing date the 29th January, 1577, the magistrates and council ordered, "That James Ross, the thesaurer, with all diligence possibill cause big the Hie Scole in the Blak Frere Kyrk yaird as place most commodious."

The building then erected continued to be occupied for the High School till the school now existing was built in 1777, in terms of a resolution to that effect, taken by act of council herewith produced, dated 8th March, 1775.

That the present school is built upon the site of the old one, is instructed by an act of council, herewith produced, of date 9th April, 1777, from which it appears that the managers of the Infirmary had granted a piece of ground from their garden for enlarging the area; and a hope was then held out that the Incorporation of Surgeons would yield up, for the same purpose, a small piece of ground from their garden adjoining, which was afterwards obtained.

The ground now occupied by the Royal Infirmary was originally part of that belonging to the Blackfriars, bounded on the west by the grounds of the Kirk of Field, as their title-deeds instruct; and according to Maitland (pp. 181, 182), the Royal Infirmary stands upon the site of the Monastery of the Blackfriars, whose "gardens extended along the town wall from the Kirk of Field gardens to the eastern part of the said wall, by the Cowgate Port; and the place at present denominated the High School Yard was the cemetery belonging to the convent."

The Hie Scole.

xxix^no Januarij, 1577.

29 January, 1577. The quhilk day the Prouest Robert Kar, Alexander Vddert, Jhonne Robertsoun, and Henry Charteris, baillies; James Ross, thesaurer; Lucas Wilsoune, dene of gyld; Andro Sclater, Maister Jhonne Prestoun, Jhonne Achesoun, Jhonne Arnot, Alexander Guthrie, James Guthrie, Dauid Danyelstoun, and Thomas Myllar, of the counsale, the dekynnis of the tailzeouris, goldsmythis, skynnerris, baxsteris, cordineris, fleschouris, furrouris, barbouris, walkarris, websteris, being convenit in the counsalhous of this Burgh, Fyndis and deliueris that James Ross, thesaurer, with all deligence possebill cause big the Hie Scole in the blak frere kyrk yaird, as place most commodeous, And ordanis Maister Jhonne Prestoun, William Lytill, James Ross, and Jhonne Robertsoun, baillie, and Dauid Kinloch to tak the aivse of the maist perfyte craftismen, masonis, and wrychtis, to the situatioun and biging of the said scole, and the expensis debursit be the said thesaurer to be allowit in his comptis.

Act of Council, authorizing the Lord Provost to subscribe Three Hundred Guineas for building a New High School House.

Edinburgh, 8th March, 1775.

8 March, 1775. The city treasurer represented, that after some conversations he had lately with some of the most respectable inhabitants of this city, they agreed to raise a sum, by subscription, necessary for erecting a new commodious school-house for this city, but in the meantime wanted the concurrence of the honourable council; which being considered by the magistrates and council, they, with the extraordinary deacons, did and hereby do authorize and empower the lord provost, in name and behalf of the town-council, to subscribe three hundred guineas towards building the said school-house.

(Signed) JAMES STODART, *Provost.*

Act of Council, authorizing the Chamberlain to pay the City's Donation towards the erection of the New High School.

Edinburgh, 9th April, 1777.

April, 1777. The lord provost produced in council a letter which he had received from Sir William Forbes, in name of the committee of subscribers for erecting a new High School in this city in the room of the present ruinous building, acquainting the council that they had fixed upon a plan, had received from the managers of the Royal Infirmary a grant of a piece of ground from their garden for enlarging the present area, and had reason to hope the Incorporation of Surgeons would, for the same purpose, yield them a small piece of ground from their garden adjoining: That in order to place the new school properly, it will be necessary to pull down the two school rooms to the east of the rector's class; but in order to accommodate properly the masters and scholars who at present occupy these rooms, it is proposed either to divide that part of the common hall which will still remain under the other three school-rooms, into two, or to hyre two apartments in some commodious part of the town untill the new school be compleated: That the committee flattered themselves the measures they have thus far followed will meet with the approbation of the honourable magistrates and council; consequently, that the council will be pleased to give authority to the committee of subscribers to pull down a part of the old school, and issue an order on the chamberlain to pay the city's donation of three hundred guineas to Mr. John Wauchope, writer to the signet, the committee's treasurer, for the purpose of carrying on the building, which it is now proposed to begin as soon as the season will permit; Which letter being read in council, was, on the 26th of March last, remitted to the lord provost's committee, and they to report: But this day, before any report was made, there appeared in council Sir William Forbes and Mr. David Dalrymple, advocate, two members of the committee of subscribers, and delivered a letter signed by Sir William, by appointment and in name of the committee, signifying their sorrow to learn that the council made some difficulty as to the payment of the city's donation, without first receiving certain securitys as to the compleating the work without putting the community to any further expence; and from the other circumstances set furth in the said letter, and what the council heard from these gentlemen in person in their own presence, having the best reason to hope that a sum sufficient for defraying the expence of the undertaking will be obtained by voluntary subscription and other ways, and that the city will be put in possession of a building which may last for ages, at no greater expence than it would cost to patch up and put a roof on the present ruinous incommodious fabrick,—They, with the extraordinary deacons, authorize and appoint the city chamberlain to make payment to Sir William Forbes of the city's donation of three hundred guineas, agreeable to an act of council on the 15th day of February, 1775.

(Signed) JOHN DALRYMPLE, *Provost.*

ORDER XI.—A Statement by whom are the estates of the College of Edinburgh managed, and their Funds and Revenues administered; and the application and expenditure thereof regulated; and if, whether under any, and what controul.

Return by the Senatus Academicus.

The general funds for the support of the college, are managed by the patrons.

The funds for the museum of Natural History, are managed by the Regius Professor of natural history, under the controul of the Barons of Exchequer.

The Senatus Academicus have charge of the Stewart and Macpherson bursaries free from any controul*; and though they have managed also the fund of the college library, the patrons (of late particularly) have claimed the right and power of controul on that branch of expenditure.

The allowances for the support of the botanic garden, are under the direction of the professor of botany, in virtue of his commission from the crown, and both that from the civil list and from the town council are annually and in detail accounted for on oath to the Barons of Exchequer.

Return by the Town Council.

The general funds and revenues of the college are managed and administered by the Lord Provost, magistrates, and council of the city of Edinburgh, and the application and expenditure is by them regulated.

The Senatus Academicus, however, take charge of the fund arising from the matriculation and janitor's fees, but under the controul of the Lord Provost, magistrates, and council. See late Acts of council, 21st August and 11th September, 1811, among the copies sent in answer to the second requisition.

ORDER XII.—A Return of the number of Bursaries at each College, by whom founded, and in whom is the right of presentation; of the Funds attached to the same, and the annual allowance to each Bursar; and what certificates are required from Bursars previous to admission, (See Order XXI.)

Return by the Senatus Academicus.

The Senatus Academicus cannot give a complete answer to this query from their own records. The deeds of the respective mortifications for bursaries are in the possession of the patrons, and from these deeds alone it can be known by whom each bursary was founded, and in whom is the right of presentation, and what are the funds attached to the same, and the annual allowance to each bursar; and what certificates are required to bursars previous to admission.

The Senatus Academicus have often applied to the patrons for copies of these deeds, but copies never have been furnished, though the whole deeds appear to have been collected into one volume, in consequence of a motion made in the town council, and adopted of date 6th September, 1813.

* * * * * * * *

The following bursaries, not in the hands of the town council, are established in the university, and the following tabular view is submitted by the Senatus Academicus:—

Name of the Founder.	Date of Mortification.	Sum Mortified.	Annual Allowance to Bursars.	Patrons of the Bursaries.	Destination and Provisions.
Agnes Nairn	1703	5000 merks, and afterwards of interest that had fallen due, 257*l.* 14*s.* Scots	19*l.* 16*s.* 8*d.*	The Very Rev. Dr. Francis Nicoll	For behoof of a Student of Divinity, Dr. Nicoll appoints a Bursar to hold it for one year only; but if he see cause, he appoints the same Bursar for more years than one, and he gives a preference to the sons of clergymen in small livings and having numerous families.
Thomas Short	1778	275*l.* 3*s.* 4*d.*	11*l.* 8*s.*	Earl of Morton	Destined to a Student attending the Mathematical 2*nd year* for three or four years.
Rev. James Stewart	1810	1000*l.* of 3 per Cent. Consols	10*l.* each to three Bursars	Principal and Professors of the University of Edinburgh.	One Bursar is appointed each year in the second Session of his Course of Languages and Philosophy, and he holds it for three successive years. Candidates are examined by comparative trial previous to appointment, the preference being given in terms of the Mortification to Students of the name of Stewart or Simpson.
Dr. Don. Grant ...	1817	5998*l.* laid out in the purchase of the lands of Ferneyside in the parish of Liberton	100*l.* to each of two Bursars	Sir James Grant, of Grant, Alexander Anstruther, Esq., Advocate-General of Madras, Henry M'Kenzie, Esq., Edinburgh, or their legal representatives; whom failing, the Principal and Professors of the University of Edinburgh.	The Trustees make it a condition of the nomination, that the Students shall give regular attendance at three Classes in the University of Edinburgh during each Winter Session of their respective appointments, and Certificates to this effect are required before their Bursaries are paid.
Sir John M'Pherson	1821	2500*l.* of 4 per Cent. Carnatic Stock	100*l.*	Principal and Professors of the University of Edinburgh.	The Bursary is intended for the benefit of a Student of the Highlands, and who understands the Gaelic language. It is bestowed after a comparative trial on a Student in the last Session of his attendance on a regular course of Languages and Philosophy.

* N.B.—The amount of these Bursaries is stated in Answer to Order XII.

University of Edinburgh.

Appendix. Order XII.

There are bursaries established for students at this university by the governors of Heriot's hospital; and one by the faculty of advocates and by the presbytery of Dunbar; but as they are not in the gift of the university, or under its charge, they are not included in this table.

Also was presented by the Senatus Academicus.

Copy of the Report of Baillie Johnstone, respecting the Deeds of Foundation of Bursaris, and the Regulations incident to each Bursary, 6th Sept. 1813. (Not printed by the Commission.)

Return by the Town Council.

(1.) The accounts which were produced in answer to the ninth requisition, contain full returns annually of the number of bursaries—by whom they were founded, and in whom is the right of presentation—the funds attached to the same—and the annual allowance to each bursar. But to meet the wishes of the Right Honourable Commissioners, a separate return is now herewith sent, certified by the accountant of the city.

The Act of Council 10th March, 1658, being one of those transmitted in answer to the second query formerly put, bears—"That in the admitting of Bursars great neglect had been in trying their qualifications. It is yrfor thoght fit that none thereafter be admitted till they be once resident in the "college, one full q'rter of ane year; and that afterward they promis ane sufficient testimonial from "the Primar and ane or two of the Regents, that they are of guid literature, and hopeful to prove able "students;—and that they be admitted for no longer than during the Counsell's pleasure—and that "the Primar and Master of the College give into them q'rterlie new certificates of their guid behaviour, qualifications, and literature, without which the treasurer is not to pay them their pensions; "Item, that the ministers be spoken, that they may thereafter be careful that none be admitted be the "sessions except such as sall be qualified as aforesaid."

That again, by the Act 25th June, 1658, a copy of which has also been transmitted to the commission, nearly the same regulations are prescribed.

At present, if an applicant for a bursary has attended the college, he produces certificates of his progress from the professors, and such other recommendations as to character and literary acquirements as he may be able to procure. If he has not attended the college, the latter are all the certificates expected.

The Lord Provost has given instructions, that a volume made up in the year 1813 from the council records and inventory of the papers in the charter-house, on the motion of Robert Johnston, esquire, then college-bailie, narrating all the deeds of foundation of bursaries, and the specialties and regulations stipulated by the founders, be forthwith copied, and laid before the Right Honourable Commissioners, as containing the fullest and best information in the possession of the town on the subject of these bursaries, and he has also directed search to be made for the deeds of mortification themselves, and copies of all such as are found furnished to the commissioners. These will accordingly be prepared, and sent as soon as possible. In the meantime, there is sent herewith a copy of the bond granted in 1741, when the whole mortifications for the college were accumulated into one sum, amounting to 11,451*l.* 12*s.* $2\frac{8}{12}$*d.* sterling, and in which all the mortifications and their respective objects seem to be specified.

Bursars on Thomas Frazer's mortification.

The sum mortified was 800*l.* in 1758, bearing an annual interest of 32*l.*, for maintaining two bursars of the name of Frazer, while they finish their courses at the college, and for the space of three years thereafter,—they always making their election within three months, whether to follow divinity, law, or physic.

In the presentation of the Lord Provost, Dean of Guild, and treasurer.

Annual allowance to each bursar, 16*l.*

Bursars on John Penman's mortification.

This mortification is regulated by John Penman's two settlements, of dates, 5th and 9th October, 1764, and decreet-arbitral of Mr. David Dalrymple, advocate, dated 27th June, 1766. The sum mortified extends to 387*l.* 15*s.* $6\frac{6}{12}$*d.*, bearing interest at the rate of $4\frac{1}{2}$ per cent, from 25th November, 1823, per the city's bond in favour of Walter James Little Gilmour, of Libberton and Craigmillar, as nominee of the mortification, and of his heirs; whom failing, to the moderator of the presbytery of Edinburgh for the time, and his successors in office. All of which are particularly detailed in the minutes of council, under date 3d December, 1823.

The annual interest is 17*l.* 9*s.*, and falls to be disposed of thus:—To a divinity student 8*l.*, and to a philosophy student 5*l.* 8*s.*, towards the expense of educating them at the university of Edinburgh;—To a scholar to be educated at the high school of Edinburgh, 1*l.* 16*s.*; and the remaining sum of 2*l.* 5*s.*, after the decease of Isobel and Margaret Little, the life renters thereof, also to be paid to a scholar to be educated at the high school of Edinburgh.

The bursars to be presented to the several bursaries to enjoy the same each for the space of four years respectively.

In the presentation of the heirs of the mortifier's nieces, Grizel and Jean Penman; whom failing, of the heirs of William Charles Little, of Libberton; all of whom failing, the right of presentation devolves upon and belongs to the presbytery of Edinburgh.

Edinburgh, September 23, 1826. ARCH. BRUCE, *Accountant.*

University of Edinburgh.

Appendix. Order XII.

(3.) In making the return to this requisition on the 28th September last, the Lord Provost stated that had given instructions that a volume, made up in the year 1813, from the council records, and inventory of the papers in the charter-house, on the motion of Robert Johnston, Esq. then college baillie, narrating all the deeds of foundation of bursaries, and the specialties and regulations stipulated by the founders, should be forthwith copied and laid before the Right Honourable the Commissioners, as containing the fullest and best information in the possession of the town on the subject of these bursaries; and that he had also directed search to be made for the deeds of mortification themselves, and copies of all such as should be found to be furnished to the commissioners.

N.B.—An abstract of all the deeds is in preparation.

The Lord Provost now sends the volume alluded to, and he begs to refer the Right Honourable Commissioners to the return to a requisition since received, for copies of all deeds of mortification of every description in favour of the college of Edinburgh, for all further information as to the deeds of mortification for behoof of bursars.

In the introduction to this volume will be found the act of council, 1st February, 1813, containing a proposition for making the bursaries more valuable for the bursars, and for making up this volume—Note by Mr. Johnston appended thereto, dated 12th August, 1813—Report to Council, 6th, and approval and motion of thanks to Mr. Johnston by the council, 8th September, 1813.

(Signed) Carlyle Bell. *Conjt. Clk.*

Edinburgh, 23d October, 1826.

The following is the act of council prefixed to the volume regarding Bursaries, referred to in the preceding report, viz.

These curious and important extracts have been collected in consequence of the approval by the council of the following motion:—

Council Chamber, Edinburgh, 1st February, 1813.

[1 February, 1813. Baillie Johnston begs leave to represent to the council, that in order to maintain the patronage of the city, and to do justice to the founders of bursaries, he is induced to propose that a committee should be appointed to meet a committee of the Senatus Academicus, to consider of the propriety of exempting from the ordinary fees such young men as attend the university, enjoying the said bursaries who are in general the sons of clergymen, with small stipends, or sons of poor citizens of Edinburgh, and this he does open the grounds—1st, Because these foundations being some of them near 200 years standing, though considered ample in those days, yet the value of money being, as is universally known, depreciated in a great degree, many of them do not now afford to the holders the means of discharging a single fee;—and 2nd, Because the professors have of late had a great increase to their revenues authorized by the council.

Baillie Johnston would also beg leave to propose, that the same committee be directed to examine the deeds of foundation of the said bursaries, and to report to the council what are the specialities and regulations stipulated by the founders; so that in future both may be rigidly adhered to; and what are the means best adapted for accomplishing these ends.

(Signed) Ro. Johnston, *C. B.*

The former part of this motion went for nothing, as at a conjunct meeting of a committee of the patrons and professors, the latter were not inclined to forego any part of their fees. But it is hoped much benefit will result from following out the latter part, both as it respects the honour of the college, the dignity of the patrons, and the privilege of the students.

Order XII*.—A Return of the Names of the Bursars in the University of Edinburgh as at 8th November 1826, and the Terms of their Entry, under the Management of the Town-Council.

Order XII***.—Return of the Names of Persons holding Bursaries in the University of Edinburgh under the Presentation of the Senatus Academicus.

Return by the Senatus Academicus.

Steuart Bursary.—Mr. John Dunbar, Mr. Robert Cowe, Mr. John Stewart.

The two latter gentlemen will draw for the year concluding 4th April 1827, along with a third student not yet nominated, in place of John Dunbar, whose nomination has expired.

Macpherson Bursary.—Mr. P. M'Dougal.

Andrew Duncan, Jun. *Secy. Univ. Edinb.*

Edinburgh College, 16*th December*, 1826.

Act of Council regarding Bursaries in the College of Edinburgh.

Edinburgh, 6*th December*, 1826.

6 December, 1826.

Read the following report by the College-Committee, Edinburgh, 2nd December, 1826. The College-committee having resumed consideration of the report of the 24th ult. regarding the disposal of the vacant bursaries, and having considered also the statement made by Deacon Maclagan to the council on Wednesday last, as to the great inconvenience to the young men, from the bursaries in general commencing at a period long subsequent to the date at which they are filled up, the committee are of opinion that the following resolutions should be adopted by the council:—

1st, That the several bursaries recommended to be granted by their report of the 24th ult., should (with the exception of that on Ford of Branxton's Mortification, which commenced at Martinmas, 1825), be enjoyed for the space of four years from and after the term of Martinmas last, instead of the term o Lammas next, but with the condition that when the bursars draw the quarter due at Candlemas o each year, they shall produce certificates that they are actually attending the University.

University of Edinburgh.

Appendix. Order XII***. 6 December, 1826.

2nd, That in order to prevent the recurrence of the great inconvenience which has hitherto arisen to the young men on whom the bursaries have been bestowed, from the circumstance that these bursaries have in general commenced at a term long subsequent to that at which they are filled up, the magistrates and council should instruct the accountant henceforward not to report any bursary in the council's presentation as vacant, unless it shall actually have been so at or preceding the term of Lammas, immediately before that of the Martinmas, at which the bursaries fall to be filled up.

3rd, That the persons appointed to such bursaries shall, when they draw the Candlemas quarter, be required to produce evidence of their being in actual attendance at the University.

The Committee have further to report, that it is their opinion that all future applicants for bursaries should be examined by the College-Committee, both in reference to their classical attainments and general knowledge, and as to their capability, from their understanding and habits, to reap benefit from the enjoyment of such bursaries, and for this purpose that the Committee shall be empowered to call in the assistance of the rector or master of the high school, or other qualified person.

Finally, the Committee beg leave to recommend to the council, that for the purpose of carrying the first of these resolutions into effect, and of putting the future appointment of bursars on a distinct and regular footing, the sum necessary to defray the expense of commencing the payment of the bursaries presently filled up from Martinmas last, instead of Lammas next, should be paid from the general funds of the city, and the Committee feel assured that from the urgent claims which the circumstances of the bursars now appointed present, the council in granting this sum, will perform an act of liberality and humanity, no less honourable to the town-council of Edinburgh, than satisfactory to the community. (Signed) Adam Luke, *Preses.*

The magistrates and council approved of the foregoing report, and resolved in terms thereof, recommending to the committee, in filling up future vacancies, to keep in view the terms of the different mortifications.

Rev. James Miller and Spouse	Kirk-Session of Kippen	William Rowand	11th Oct., 1830

Notes.—1st. In this last case the town granted a bond of annuity to the minister and elders of Kippen, for the sum sunk. They appoint the bursar, and though the town pay the money to him, yet they have no control over him, as he just draws the interest of a sum sunk, by virtue of an order from the party to whom, and not to the bursar, the town are bound to pay the money.

2nd. See Note on Philosophy List as to Fraser Bursaries.

Further information respecting Bursaries in the College of Edinburgh.

"The Baptists have two *Exhibitions* for Students to be educated for *four* years, at one of the Universities of Scotland (formerly Aberdeen, now Edinburgh), given them by Dr. Ward, of *Gresham College*."—*Evans's Sketch of the Denominations of the Christian World. Lond.* 1821, *p.* 221.

"Wm. Rigge, of Aitherine, left 5000 merks for the maintenance of bursars in Edinburgh College, and built a fair chamber for their lodging."—*MS. Scott of Scotsturret.*

Bursaries, Edinburgh College, Dunbar.

1. *Ford's Bursary*—Instituted 1678. Hector Ford, of Branxton, mortified in the hands of the town of Edinburgh, 1200 merks Scots, for the education and maintenance of six bursars at the University of Edinburgh; relations of founder, and name of Ford to be preferred; afterwards, young men born or educated at Dunbar or Inverwich, appointed by the *ministers* of these *places*.

2. *Bryson's Bursary*—1702. Thos. Bryson mortified in the hands of the presbytery of Dunbar, 4500 merks Scots, for two bursars; after his own name and kindred, to be applied to young men born or educated at Dunbar.

3. *Hume's Bursary*—1784. Wm. Hume, tenant East Barns, mortified 400*l.* sterling, for maintenance of two bursars, at Edinburgh, or any other college.

Ten bursars in the above.

University of Edinburgh.

Appendix. Order XII***.

27 August, 1827.

Faculty of Advocates' and Heriot's Bursaries.

Edinburgh, 81, *Great King-street*, 27*th August*, 1827.

Sir,—In answer to your letter of the 21st instant, I have to mention that the bursary founded by the Faculty of Advocates in the college of Edinburgh, amounts to an annual payment of 18*l.*, which is drawn from the general funds of the Faculty; and so far as I know, it is subject to neither increase nor diminution of any kind. The present holder of it is Mr. David Gray.—I am, Sir, your very obedient humble servant,

(Signed) A. Bell, *Treasurer of the Faculty of Advocates.*

To the Secretary of the University Commission.

Heriot's Hospital Chambers, 5*th September*, 1827.

5th September, 1827.

Sir,—In answer to yours of the 21st ult., I beg to state, for the information of the Commissioners, that George Heriot, by his will, founded ten bursaries in the University of Edinburgh, for boys unconnected with the Institution, who, upon comparative trial, should exhibit evidence of good scholarship. The amount at present allowed is 80*l.* each, payable at the rate of 5*l.* per quarter for four years. In addition to the above, all boys who, upon leaving the Institution, after an examination by a committee of the governors, are declared hopeful scholars, and fit to follow any of the liberal professions, are entitled to a bursary of 120*l.*, payable in the course of four years, at the rate of 7*l.* 10*s.* per quarter. Of this last class, there are generally about six annually attending the University. There are no deductions on account of fees or allowances of any description. A copy of the regulations relating to the hospital bursaries is herewith enclosed. Any further information that may be wanted will be readily afforded.—I am, Sir, your most obedient servant,

(Signed) Kincaid Mackenzie, *Treasurer.*

Jas. Aitken, Esq., Secretary to the Royal College Commission.

Treasurer's Chambers, George Heriot's Hospital, 22*nd October*, 1829.

22 October, 1829.

Rev. Sir,—In reference to the letter which I addressed to the Secretary to the Royal Commission, appointed to inquire into the system of education pursued in the Scottish Universities, of date the 5th September, 1827, relative to bursaries granted by the governors of George Heriot's Hospital, I have to explain that part of it which is applicable to the words "comparative trial," for the purpose of avoiding misinterpretation, to this effect, that although in some degree the words quoted may apply, yet the application is in a limited sense, the governors reserving to themselves the right of judging of circumstances as well as scholarship of the parties that prefer the application, so far as regards the ten out bursars. I shall suppose, by way of illustration, that there are fourteen applications, and that there is only one vacancy;—a Committee of the Governors meet for the purpose of going over all the petitions for admission, and informing themselves of the circumstances of the parties making the application: being in possession of the latter fact, they select a few of the cases which appear to them to be the most claimant. These they put down for examination in the order of No. 1, 2, 3, 4, 5, 6; having determined this, the Committee meet upon a day subsequent, and examine the scholastic attainments of the youth, No. 1; should these prove to be satisfactory, in that case he is preferred to the vacant bursary. But should it prove otherwise, they then examine No. 2, and so on until the list is exhausted and the Committee be satisfied of the proficiency of the candidate's acquirements as fitting him for college, for without these, to obtain a bursary, is hopeless. I trust that this explanation may not be considered as obtrusive, while I may add that I have nothing to offer as respects those boys in the hospital who being declared hopeful scholars receive bursaries.—I am, respectfully, Reverend Sir, your most obedient Servant,

Kincaid Mackenzie, *Treasurer.*

On the Table of the Commission.—Copy of a Letter from the Very Reverend Principal Baird, addressed to the Lord Provost, relative to the Bond, Bursaries, &c., dated 28th July, 1814. Presented by the Senatus Academicus.

Order XIII.—What is the commencement and duration of the Session at the College of Edinburgh; by what authority has the same been fixed; and, if any alterations have taken place therein, when did the same take place?

Return by the Senatus Academicus.

The Winter Session commences on the last Wednesday of October, and ends the last day of April.

The Summer Session commences the first day of May, and ends the last day of July.

The commencement of each of the classes in the present Session will be seen in the programme herewith sent.

University of Edinburgh, 26*th September*, 1826.

26 September, 1826.

The classes for the different branches of Education will be opened for the ensuing Session, as follows:—

The Very Reverend George H. Baird, D.D., Principal.

I.—Literature and Philosophy.

Classes.	Days and Hours of Opening.	Professors.
Junior Humanity	Wed. Oct. 25. Eleven to one o'clock.	Mr. Pillans.
Senior Humanity	Tues. Nov. 15. Nine o'clock . . . . / Tues. and Thurs. Nine and Two o'clock	Mr. Pillans.
First Greek	Wed. Oct. 25. Ten and one o'clock .	Mr. Dunbar.
Second Greek	Tues. Nov. 14. Eleven o'clock . . .	Mr. Dunbar.
Third Greek (Mond. Wed. Frid. Sat.	Wed. Nov. 15. Two o'clock	Mr. Dunbar.

Classes.		Days and Hours of Opening		Professors.
First Mathematical	Tues.	Nov. 14.	Twelve o'clock	Mr. Wallace.
Second Mathematical	Tues.	Nov. 14.	Ten o'clock	
Third Mathematical	Wed.	Nov. 15.	Nine o'clock	
Logic	Tues.	Nov. 14.	One o'clock	Rev. D. David Ritchie.
Moral Philosophy	Tues.	Nov. 14.	Twelve o'clock	Mr. Wilson.
Political Economy	Tues.	Jan. 2.	One o'clock	
Natural Philosophy	Tues.	Nov. 14.	Eleven o'clock	Mr. Leslie.
Rhetoric and Belles Lettres	Wed.	Nov. 15.	Twelve o'clock	Rev. Dr. Andrew Brown.
Natural History	Tues.	Nov. 14.	Two o'clock	Mr. Jameson.
Universal History	Frid.	Nov. 17.	Three o'clock	Sir. W. Hamilton.

II.—Theology.

Divinity	Mon.	Nov. 20.	Eleven o'clock	Rev. Dr. Will. Ritchie.
Divinity and Church History	Mon.	Nov. 20.	One o'clock	Rev. Dr. Meiklejohn.
Hebrew and Chaldee Languages	Mon.	Nov. 20.	Ten o'clock	Rev. Dr. Brunton.

III.—Law.

Civil Law. Pandects	Tues.	Nov. 14.	Two o'clock	Mr. Irvine.
Institutes	Tues.	Nov. 14.	Three o'clock	
Scots Law	Tues.	Nov. 14.	Three o'clock	Mr. Bell.
Public Law	....	....	....	Mr. Hamilton.
Conveyancing	Tues.	Nov. 14.	Two o'clock	Mr. Napier.

IV.—Medicine.

Dietetics, Materia Medica, and Pharmacy	Wed.	Oct. 25.	Eight o'clock, A.M.	Dr. Duncan, junior.
Practice of Physic	Wed.	Oct. 25.	Nine o'clock —	Dr. Home.
Chemistry and Chemical Pharmacy	Wed.	Oct. 25.	Ten o'clock —	Dr. Hope.
Theory of Physic	Wed.	Oct. 25.	Eleven o'clock —	Dr. Duncan, senior. Dr. Alison.
Anatomy and Pathology	Wed.	Oct. 25.	One o'clock, P.M.	Dr. Monro.
Principles and Practice of Surgery	Wed.	Nov. 15.	Four o'clock —	
Theory and Practice of Midwifery	Tues.	Nov. 14.	Three o'clock —	Dr. Hamilton.
Clinical Medicine (Tues. and Friday)	Tues.	Nov. 14.	Four o'clock.	Dr. Duncan, junior. Dr. Home.
Clinical Surgery (Monday and Thursday)	Mon.	Oct. 30.	Five o'clock —	Mr. Russell.
Military Surgery	Wed.	Nov. 15.	Two o'clock —	Dr. Ballingall.
Medical Jurisprudence (Monday, Wednesday, Friday)	Wed.	Nov. 15.	One o'clock —	Dr. Christison.

Royal Infirmary, at Noon, daily.

During the Summer Session, lectures will be given on the following branches of education :—

Botany, by Dr. Graham.
Clinical Lectures on Medicine, by Dr. Home.
Clinical Lectures on Surgery, by Mr. Russell.

LIBRARY.

N.B.—In consequence of a joint resolution of the patrons and professors of the University, every student, before entering with any professor, must provide himself with a matriculation ticket, for which the fee is ten shillings, including all public college dues. Attendance will be given in the library, every lawful day, from ten till three o'clock, to enrol the names of the students in the *Album*, which is the only legal record of their attendance in the University.

The library will be open for the purpose of giving out books to students, every lawful day during the winter session, from eleven o'clock A.M. to two o'clock P.M., except on Saturdays, when it will be shut at one o'clock precisely.

Students are particularly requested to take notice, that, in applying for books, it is necessary to bring with them a written list of such as they want, and that they present to the librarian their matriculation ticket, with the ticket of some one professor for the present session.

Every book taken out to be returned within a fortnight, uninjured. The same book may be taken out again for another fortnight, if required, unless previously asked for by another person.

Andrew Duncan, Jun. *Secretary.*

Edinburgh College, November 27, 1812.

*** The Senatus Academicus of the University of Edinburgh, in order to be able to ascertain the regular attendance of medical students, have resolved,

I. That every medical student shall matriculate and subscribe his name in the *Album* of the University, in the month of November, unless he obtain special leave, on application to the medical faculty, to enter at a later period.

II. That he shall inscribe his name again in the *Album* in the first week of every month thereafter, till the end of the session.

III. That no certificate of attendance on a winter's session, such as is required for graduation, be granted to any student whose name has not been regularly inscribed by himself in the *Album*, at all the six periods above mentioned.

University of Edinburgh.

Appendix. Order XIII.

IV. That, also, every medical student who matriculates for the summer classes, shall inscribe his name in the *Album* on or before the 15th of May, and thereafter in the first week of every month, as directed for medical students in the winter session.

N.B.—At the time of the first inscription for the session, each student pays the usual matriculation fee of ten shillings; but no fee is paid at the subsequent inscriptions.

By order of the Senatus Academicus,

Edinburgh College, October 2, 1826. ANDREW DUNCAN, Jun. *Secretary.*

ORDER XIV.—A Return of the number of the different Faculties established in the College of Edinburgh; and by what authority, and when issued.

Return by the Senatus Academicus.

There are four faculties, or four sets of professorships, classed together under the name of faculties in this University; namely, the faculties of Theology, Law, Medicine, and Arts; but none of them can be traced to any deed, act, or regulation, constitutive of a faculty, or designing certain classes as making a faculty. The term was originally used in this University to describe the whole body of professors in their corporate capacity. They were called "The Faculty," in the same way that they are now, and long have been, called the "Senatus Academicus." These two terms appear to have been often used indiscriminately for that purpose in the first thirty or forty years of last century; after which the term Senatus Academicus was almost constantly used in speaking of the meetings and corporate acts of the professors.

Long before the period when the term Faculty ceased to be used in the sense just mentioned, it had also been applied to certain sets of professorships, such as those of Theology and of Philosophy, the one being called the Faculty of Theology, the other the Faculty of Arts. But the precise period when any of the sets of professorships, now called faculties, began to take that name, and to be recognised as distinct sections of the Senatus Academicus, does not appear to be anywhere recorded. The progress to this seems, in every instance, to have been gradual and silent, and to have depended mainly on the progressive institution of professorships, capable of being so assorted and distinguished.

For a considerable period, the theological section of the University consisted only of two members, the Principal and the Professor of Divinity. The institution of the class of Ecclesiastical History added a third; and these three came to be considered and recognised by the Senatus Academicus as the Theological Faculty. The Professor of Hebrew and Oriental Languages is always in practice added to this faculty, in virtue of a motion to that effect in the Senatus.

There were no materials for the formation of the Faculty of Law till 1709, when the Civil Law class was instituted, there being before that time no kindred class but that of public law, founded in 1707. Whether these two classes were considered as a faculty, or whether the recognition of a Law faculty in this university did not take place till after the institution of the Scots Law class in 1722 does not appear, there being no notice of such a faculty in any existing records or minutes till some years later than that period.

The class of Conveyancing, soon after its institution, was added to this faculty, upon a motion to that effect from the faculty itself.

Besides the Law classes, this faculty has been generally considered as embracing the class of Universal History. Whether this has happened from the Faculty of Advocates having virtually the appointment of the professor, or from its being at first intended that the professor should lecture on Greek and Roman Antiquities, in aid of the study of Civil Law, there are now no means of judging. It is proper however to observe, that in a classification of the Senatus Academicus occurring in the records in 1785, this class is entered as belonging equally to the Faculty of Arts; and that the present professor has lately claimed admission into that faculty, with the view of having his class inscribed in the curriculum of study for the degree of Master of Arts. The papers on this subject will be found in the Appendix to Return 51.

The *Medical* Faculty, like that of Law, is but of late origin in this University. In 1726, there is an act of the Senatus Academicus, directing all candidates for the degree of M.D. to be examined by the Professors of Medicine. From this it appears, that these professors were then recognised as a separate division of the Senatus; but the term "Medical Faculty" does not occur in any existing records till several years thereafter.

This faculty is held to consist only of those professors who are in their commissions styled Professors of Medicine, or of the Theory or Practice of Medicine; a description which does not include some other professors in the medical department, and who have not therefore been yet added to the Medical Faculty.—(*See Answers to next Query.*)

The Faculty of Arts may be considered, in some respects, as the most ancient of the whole.

Soon after the college was founded, four regents were appointed to teach the different branches of literature and philosophy. These appear to have constituted the Faculty of Arts, or Philosophy, as it was more frequently denominated, and from the first, according to Crawford's statement*, they prepared their respective classes for graduation. A minute account is given by that author of the trials that took place in 1604, of the students in the different classes, of the public disputations on the theses, and of the ceremony of graduation, all of which he says were observed from the first times. "The primitive custom," he observes, "was, that immediately before the act of graduation in the public assembly of the University, the candidates were, by publicly naming of them, called in according to their distinct ranks, to an eminent place before the principal, from whom they received the degree by solemn ceremonie. The trial of the students and the act of graduation were very frequently witnessed by the Chancellor and other Privy Counsellors, the Treasurer and Lords of Exchequer, with the Lords of Session, Advocates and Clerks."

All these faculties are in use to meet separately for the purpose of deliberating upon matters supposed to have some particular reference to them; chiefly upon the subject of degrees, and the studies connected with them; but no resolution of any faculty is of any avail, till sanctioned by the Senatus Academicus, in whose name all degrees are conferred.

The Faculties of *Law*, *Medicine*, and *Arts*, have each a dean or convener chosen by the faculty. The principal is *ex officio* convener of the Faculty of Theology.

* History of the University, p. 57.

789
University of Edinburgh.

ORDER XV.—A Return of the number of Professorships, and of classes in the College of Edinburgh, specifying the date of the institution of each, the Faculty to which each class belongs, the subjects of the course of study, and whether the classes are carried on for more than one Session, and for how many.

Return by the Senatus Academicus.

(1.) The following Table exhibits a view of the Number of Professorships and of Classes in the College of Edinburgh, the Faculty to which each belongs, the Subjects of the Course of Study, and whether the Classes are carried on for more than one Session, and for how many.

Professorships.	Date.	Faculty.	Number of Sessions through which the Course is continued.
Principal—1st Professor of Divinity	1586	Divinity	Does not now lecture
Divinity	1587	Divinity	Four
Humanity	1597	Arts	THREE—one of which at least is required of candidates for a degree in Arts. The second and third are to be considered private classes, leading to higher and higher departments of Roman Literature.
Hebrew	1642	Divinity	Two
Mathematics	1674	Arts	Three—as in Humanity
Botany { By the Town Council / By the Crown }	1676 / Uncertain	Medicine	One
Theory of Physic	1685	Medicine	One
Practice of Physic	1685	Medicine	One
Divinity and Ecclesiastical History	1695	Divinity	Three
Anatomy and Surgery	1705	Medicine	One
Public Law	1707	Law	No lectures now delivered
Greek	1708	Arts	THREE—as in Humanity. Also, one Course required before admission into the Divinity Hall.
Natural Philosophy	1708	Arts	One
Moral Philosophy	1708	Arts	One
Logic	1708	Arts	One
Civil Law { Institutes / Pandects }	1710	Law	One / One
Chemistry and Chemical Pharmacy	1713	Medicine	One
Universal History	1719	?	One
Scotch Law	1722	Law	One
Midwifery	1726	Medicine	One
Clinical Medicine	1741 ?	Medicine	One
Rhetoric	1762	Arts	One
Natural History	1767	?	One
Materia Medica	1768	Medicine	One
Practical Astronomy	1786	Arts	No lectures ever delivered
Agriculture	1790	?	One
Clinical Surgery	1803	?	One
Military Surgery	1806	?	One
Medical Jurisprudence and Police	1807	?	One
Conveyancing	1825	Law	One

Notes.—The only doubt in reference to the Faculty to which the Professorships of Clinical Surgery, Military Surgery, and Medical Jurisprudence belong, arises from the acceptation in which the word Faculty has generally been received in this University. They are always classed with the Medical Department, and are summoned to all the meetings, in which its concerns are discussed, with the exception of matters relative to graduation.

The Professor of Universal History has been generally classed with the Faculty of Law, but after this place is assigned to him in the minutes of the Senatus, of date 1785, a note is added, 'qui est etiam in Facultate Artium.'

Natural History is at different periods stated to belong to the Faculty of Arts and of Medicine.

Several of the Professors, whose course is stated to be confined to one Session, yet treat of several subjects more fully in some than in other Sessions.

With regard to the subjects of the course of study required in this Return, very different views have been taken by different Professors of the requisition made by the Royal Commission; some thinking their subjects sufficiently indicated by the title of their class, and others giving an account of them more or less in detail.

(2.) The lectures given by the Professor of Divinity explain and illustrate the topics, both direct and collateral, suggested by the successive articles contained in the Apostle's Creed, and the topics comprise a connected and entire view of the whole doctrines and duties of the Christian system.

The number of lectures delivered each session may amount to about forty. The number of these lectures the Professor of Divinity is not unwilling to increase, but he is unavoidably restricted by the more laborious but indispensable duty of hearing and criticising the discourses of the students. This exercise he performs at three meetings in the week, which generally consume more than an hour at each meeting, while three or four discourses are delivered before him; and at the conclusion of the whole, he addresses in detail, to the authors of the discourses, such critical and doctrinal instructions as seem to him requisite and suitable in the different cases. His leading object, by means of this exercise, as well as by his lectures in general, uniformly being to impress the knowledge and

University of Edinburgh.

Appendix. Order XV.

influence of the truth of Christianity on the minds of his pupils, and to qualify them for discharging ably and successfully their respective duties, both as ministers of the Gospel, and as members of society.

The Professor of Divinity may add, in explanation of the very great number of discourses alluded to, and of the necessity he is under to hear them, that the number of students enrolled each session has for these five years past been above two hundred; that the law of the Church imperatively prescribes, that each of them shall deliver five discourses, before being taken on trials for license; and that enrolment for five sessions is the longest period of enrolment required, and that many finish their course in four sessions, which the law permits them to do. It is obvious, therefore, that each student must deliver one at least, and that many must deliver two or more discourses in one and the same session, in order to enable them to proceed forward in procuring license as probationers. In every instance, therefore, when the Professor of Divinity would decline to fix a diet for hearing any particular student's discourses, he would manifestly do great injury to the personal interests and the professional progress of the student.

In the Chair of Ecclesiastical History, divinity is taught chronologically. The Divine Revelations to the human race are considered in the order in which they took place, and their effects upon those to whom they were given are delineated.

There is a peculiarity in the attendance of students of divinity on the class of Ecclesiastical History. The General Assembly issued a *Recommendation* to presbyteries and synods, that attendance on that class for four sessions should be made imperative on students before proceeding to their trials;—but a *Recommendation* of the Assembly does not operate as a *Law* of the Assembly. These laws, when regularly enacted, become immediately obligatory on all the inferior judicatories. A *Recommendation*, on the contrary, becomes obligatory on those presbyteries or synods only, who by a resolution of their own body, agree to adopt it as a law within their bounds.

The Recommendation as to attendance for three sessions on Ecclesiastical History has been adopted as a law by the synod of Lothian and Tweeddale, and the synod of Fife; but, so far as the Senatus know, by no inferior judicatory of the church. All those other judicatories, however, require, before admitting a student to trials before them, that he should produce a certificate of having attended the class for at least one or more sessions.

Of the Class of Hebrew, the ordinary business is translation and grammatical analysis. A few lectures are delivered on Biblical Criticism and Jewish Antiquities, and many illustrations of both are intermingled with the ordinary business. The junior students read Hebrew only; the advanced read Chaldée also, and are now taught the elements of Syriac and of Persian, devoting part of the usual hour of meeting to the separate task which they prepare.

The Professor of Civil Law gives two courses of lectures—one on Justinian's Institutes, and the other on the Pandects. As the Institutes give a view, though a short and general one, of the whole of the Roman Law, the lectures on the Pandects necessarily embrace all the subjects which have been considered in those on the Institutes. The Professor is in use, however, in order to render the Pandects Course more useful, to dwell but shortly on those subjects, which have been either fully treated of in the Institutes, or are of less importance from their little relation to the law of Scotland, and to confine his attention principally to those parts which are chiefly useful to Scotch lawyers. These, of course, he considers much more minutely than he does in the previous course of lectures on the Institutes.

The lectures on Scotch Law embrace the civil and criminal law of Scotland.

The lectures on Conveyancing are limited to that important department of legal science and practice which relates to deeds and conveyances, and the other formal writings connected with them. The course embraces a detailed but systematic view of their history, kinds, varieties, structure, and language; pointing out and illustrating their connexion, dependencies, and effects, in all the various modes in which they are applied to the constitution, transmission, limitation, and extinction of municipal or legal rights and obligations.

The lectures delivered from the Anatomical Chair consist of two great branches, viz. Anatomy and Surgery. In the former are explained the structure and position of all the parts of the human body, and that of several of the inferior animals; and at the same time their uses and organic diseases are explained, together with their symptoms and mode of treatment. In the latter part of the course, those diseases which are consigned more especially to the care of the surgeon are considered. Of this department of his lectures, Dr. Munro several years ago published a Syllabus, of which a copy is hereto annexed.*

Practical Anatomy is taught in the University under the superintendence of the Professor of Anatomy and Surgery.

The uncertainty stated in the Table, regarding the date of the constitution of the Regius Professorship of Botany†, arises from the inability to discover copies of the warrants of Mr. James Sutherland and Dr. William Arthur. That such had been issued seems to be shown by the terms of Dr. Alston's Commission in 1716, renewed in 1728. It appoints him King's Botanist in Scotland, and Keeper of the Physic-Garden, with power to set up a profession of botany and the Materia Medica, and to teach the same; and to enjoy the hail fees, casualties, privileges, and immunities of the same, "as fully and freely as the same was enjoyed" by these two persons. And there is a warrant of Queen Anne, in 1703, granting Sutherland a pension of 50*l.* per annum on account, *inter alia*, of the pains he had been at in teaching the knowledge of plants. It is to Sutherland that the first Commision was issued by the town-council in 1676.

The course of study in the Lectures on Botany examines vegetables in general as one of the great kingdoms of Nature, arranges and classes them, and specifies marks for distinguishing individuals. It investigates their formation, structure, and constitution, with the functions of particular parts, their respiration, digestion, irritability, generation, &c. &c. It examines their relation to soil, climate, and

* Printed Syllabus of a Course of Lectures on the Principles and Practice of Surgery. By Alexander Munro, M. D. Presented to the Commission by the Senatus Academicus.

† *On the Table of the Commission.*—1. Representation, by Dr. Robert Graham, Professor of Botany in the University of Edinburgh, on the subject of the said Professorships. Presented 5th October, 1826.

791
University of Edinburgh.
Appendix. Order XV.

altitude—moisture, light, and air. It inquires into the peculiar properties of vegetables, with the purposes medical, economical, and in the arts to which they are applied, and the analogies in regard to properties and functions which subsist between individuals or tribes. It intimately connects botany with animal physiology, and makes known a large portion of the materia medica.

The subjects taught by the Professor of Materia Medica are pharmacology, dietetics, pharmacy, and the art of prescription, connecting these branches on one hand with physiology and natural history, and on the other with general therapeutics and the practice of physic.

The Theory or Institutes of Medicine includes Physiology, or the study of the functions of the living body in health; Pathology, or the study of the alterations these undergo in disease; and Therapeutics, or the study of the action of remedies on the living body.

In the lectures on the Practice of Medicine is given an account of the whole history, causes, symptoms, and treatment of such diseases as require little manual operation in their treatment.

The class of Clinical Medicine has been taught annually for many years past, by such of the Professors of the Medical Faculty as choose to undertake the duty in rotation; wards having been appropriated in the Royal Infirmary in 1741 or 1742, for patients who are placed under their care, and to whose cases these lectures relate. The Clinical Lectures, both medical and surgical, are delivered twice a-week during the whole winter and summer session; the former course lasting six, the latter three months. In clinical lectures, whether medical or surgical, general truths are illustrated by special cases selected for this purpose from the whole patients admitted into the hospital. The origin and progress of the disease is minutely attended to, and the phenomena explained; the relation of each case to others of the same kind is examined, as well as the mutual relation of symptoms to each other. The student is thus taught to investigate disease; and the treatment, with the reasons that led to it, are minutely explained. When a number of similar cases in the hospital give the opportunity, they are contrasted with each other,—the peculiarities of each adverted to, and more general observations made regarding physiological and pathological phenomena. In the wards of the hospital, too, a great number of cases of disease of minor importance, yet of great consequence in practice, are rendered familiar to the student, The patients are visited and prescribed for daily, and reports of the state of their symptoms dictated in presence of the students; and whenever permission is obtained, the bodies of those who die are opened in their presence, and the morbid appearances exhibited and explained.

The Course of Lectures by the Professor of Midwifery is divided into four parts:—

I. The first department relates to the Anatomy and Physiology of the Uterine System, and therefore it includes, besides the anatomical details, a discussion of various physiological questions respecting the infant in utero, and the changes consequent upon birth; also the discussion of Medico-Legal questions in regard to the state of the embryo at the various periods of pregnancy,—its viability, and the proofs of child-murder.

II. The second department comprehends a view of all the varieties of Human Parturition, that is, of all the circumstances which happen during child-bearing in civilized society, and of the mode of treatment to be pursued.

III. The third department is divided into three parts:—

1. In the first, an account is given of all the accidents and the ordinary diseases which occur during lying-in.
2. The second subdivision comprehends a detail of the diseases to which women in the unimpregnated state are liable in common with the other sex, and also of the peculiar diseases to which the female sex is subjected.
3. The third subdivision relates to the diseases which occur during pregnancy.

IV. In the fourth department, a view of the diseases which occur from birth up to adult age, is exhibited.

The Professorship of Medical Jurisprudence and Police was instituted in 1803 by the Crown. The course of lectures has been delivered sometimes in winter, and sometimes in summer. Hitherto the Professor has lectured only in summer, the course extending through the months of May, June, and July, and consisting of sixty lectures. He proposes lecturing in the approaching winter session three days a week, so as to make a course of nearly seventy lectures.

The professorship includes two distinct branches, which are sometimes disjoined in foreign universities, where they are held in greater repute. Hitherto the present incumbent has lectured only on the first branch—Medical Jurisprudence.

The object of the lectures on Medical Jurisprudence is to enable the physician and surgeon to determine all questions in civil and criminal law, which may be submitted to him, either during the preliminary investigations, or on suits and trials. The following is as short a syllabus as the Professor can draw up, of the method in which it is discussed in his lectures. He intends printing a more detailed syllabus before the session commences; and this, if necessary, he will have the honour of also laying before the Commissioners.

His plan includes three great divisions:—

I. In the first are noticed the Causes of Sudden Death. This subject is treated under the eight following sections:—

1. *Natural Death.*—The distinctions between real and apparent death—The causes and signs of natural death, and the mode of determining whether the signs found in the dead body are adequate to infer natural death—The mode of distinguishing real from imitative morbid appearances.

2.—*Death by External Injuries*, or Wounds and Blows.—Under this head are considered—1. The manner in which wounds and blows cause death, and the mode of determining, from the appearances in the dead body, whether they are adequate to account for death; 2. The circumstances which modify the character of injuries in a medico-legal point of view, viz. age, sex, constitution, trade, previous injuries or disease, subsequent injuries or disease, *malum regimen;* 3. The chief points to be attended to in examining the bodies of persons killed by wounds or blows, viz. their seat, their direction, the probable weapon, and probable force used to inflict them; 4. The appearances in the dead body, arising from other causes than violence applied during life, but liable to be mistaken for its effects, viz. imitative hemorrhage, imitative contusions, wounds, fractures, poisoning, &c., appearances pro-

duced either by vital processes, or by putrefaction, or by violence applied after death; 5. The circumstances by which, in the case of death by wounds or blows, a medical man may determine whether they were the consequence of suicide, accident, or the intentional agency of another.

3. *Death by Poisoning.*—This subject is treated very fully in about twenty-four lectures. The professor commences with an introductory dissertation on the physiological action of poisons, and the circumstances by which their action is modified. He then treats of the evidence of *general poisoning*, as derived—1. From the general characteristics of the symptoms; 2. From the general appearances after death; 3. From chemical analysis; 4. From experiments, or actual observation of the effects on animals; 5. From such moral circumstances as are either inseparable from the medical circumstances, or require medical knowledge to judge of them. He next considers all the individual poisons under three classes—Irritants, Narcotics, and Narcotico-acrids. Each class is introduced with an abstract of the symptoms and appearances common to all the poisons comprehended under it, and an account of the natural diseases whose symptoms and morbid appearances resemble those of the poisons of the class. Each genus of poisons, if it is of sufficient importance, is very fully discussed in five sections. The 1st including an account of its physical and chemical properties in its pure state, and the method of detecting it in minute quantities, when it is mixed with solids or fluids; 2nd, Its mode of action and symptoms; 3rd, Its effects as seen in the dead body, and the mode of determining whether the poison, when found in the dead body, has been introduced before or after death; 4th, The treatment; and 5th, A critique on any important trials for poisoning, which illustrate the preceding investigations.

4. *Death by Asphyxia*, or stoppage of the respiration, namely—1. By smothering; 2. By strangling; 3. By Hanging; 4. By drowning. This subject is introduced with an account of the phenomena of death by asphyxia; the physiological cause of death; the appearances left in the dead body; and the mode of treatment in cases of suspended animation. The professor then treats of smothering, the various means of effecting it, and their several signs; next of strangling, the means of effecting it, and its signs; then of hanging, and its signs; and lastly, of drowning, and its signs and treatment. From this investigation he proceeds to notice the imitative signs in the dead body, of death by asphyxia, and the mode of distinguishing them from the real signs. After that, he considers the chief questions regarding death by asphyxia which occur in law courts—1. Whether, when a person is found killed by another, viz. strangling, hanging, drowning, it was the consequence of accident, of murder, or of suicide? 2. Whether, when a body is found with the marks of strangling, the person was strangled before or after death? 3. When a body is found hanging, whether did suspension precede or follow death, and how was death produced? 4. When a body is found in water, did it get there before or after death? if the latter, what was the cause of death?

5. *Death by Burning.*—Effects of heat on the living body—local and constitutional effects—signs on the dead body—spontaneous combustion and preternatural combustibility, whether they are possible, under what circumstances they occur, what is their cause? Effects of heat on the dead body, and medico-legal questions arising out of that subject?—*Appendix.* The *Coup de Soleil*, its mode of operation.

6. *Death by Cold.*—Mode of operation in causing death, the symptoms, varieties according to collateral circumstances, and signs in the dead body.

7. *Death by Lightning.*—The various modes in which lightning causes death, and the signs in the dead body.

8. *Death by Starvation.*—The symptoms and appearances in the dead body.

This concludes the first division of the course. It is followed by an Appendix, containing detailed directions on the mode of framing medico-legal reports, and of conducting medico-legal inspections, together with a Disquisition on the Nature of Medical Evidence.

II. The second division of the Course includes all disquisitions and questions regarding the structure, functions, and changes of the organs of generation. I first treat of the varieties to which the male organs of generation are exposed, and the changes which in the natural state they undergo in the progress of years, together with all questions regarding impotency. I then pass to the progressive changes of the female organs during life, and in the discharge of their proper functions, together with all medico-legal questions arising out of these changes.

Under this head are considered—1. The state of the female organs in their unimpregnated condition, and the characters of simple and violent defloration, followed by a medico-legal inquiry into the nature of the crime of rape, and the medical evidence by which it may be proved or disproved. 2. The changes which the organs undergo in conseqence of conception; signs of pregnancy, superfœtation, duration of pregnancy, signs of recent delivery, and causes whose effects imitate these signs; signs of recent delivery in the dead body; inquiry into the crime of procuring abortion, and the evidence by which it is established; various modes of bringing on abortion, internal as well as external. 3. Changes which the fœtus undergoes in the course of pregnancy, and particularly about the time when it is capable of outliving delivery; means of determining whether it is ripe or unripe, and the degree of its maturity; inquiry into the crimes of exposure of infants, concealment of pregnancy, and child-murder; the evidence by which they are substantiated, and the questions which they give rise to on trials. These questions are chiefly six:—1. Has the prisoner been recently delivered? 2. Has the child arrived at such a degree of maturity as to render it probable that it might have lived? 3. Was it the child of the prisoner? 4. Can she have been ignorant of her pregnancy and labour till after delivery, or till it was too late to call for assistance? 5. Was the child born alive or dead? 6. In either case, what was the cause of death? The discussion of these six questions occupies four lectures; it cannot be analyzed without too protracted a detail for this report. *Appendix.* Mode of inspecting the bodies of new-born children.

III. The third division of the Course respects all questions on the subject of *Disqualifications*, such as for legally disposing of property, for taking care of one's own person, for holding offices of trust, for criminal responsibility, for military service, for matrimony, for insuring life. This subject I consider under two heads—Disqualifications of the mind, and disqualifications of the body. The first of these includes all questions regarding insanity, which is considered as symptomatic, or a part of another disease, and idiopathic, or constituting a disease of itself; and the latter kind is treated as of two kinds, madness and idiocy. The second head, or disqualifications of the body, are considered under three sections:—1. Disqualification for military service, including an account of feigned diseases. 2. Disqualifications for marriage. 3. The diseases which disqualify for insurances on life, or entitle an insurance company to demand an additional premium.

193
University of Edinburgh.
Appendix. Order XV.

The second branch of medicine belonging to my professorship or medical police, I have not hitherto taught; but I have been preparing for a course of lectures, which I should commence whenever the other department becomes more popular.

The object of medical police is the preservation of the public health. The following are the subjects it embraces:—The salubrity of situations for houses, villages, and cities, and the means of improving their healthiness—The selection of proper articles for food and drink, and the means of detecting and preventing their adulteration—The influence of education and profession on the health, and the means of preventing their injurious effects—The mode of excluding and destroying contagious disorders—The regulations for the practice of medicine, surgery, and pharmacy—The erection, maintenance, and management of all public hospitals, for the poor, for children, for the sick and wounded, for soldiers and seamen, and for pregnant women.

In the course I have planned, I propose to form six divisions:—I shall *first* treat of the influence of education on the health; *secondly*, Of the influence of profession; *thirdly*, Of local situation; in the *fourth* place, I shall discuss the subject of contagion; *fifthly*, That of public establishments; and *lastly*, I shall treat of what may be called the police of medicine.

I have already prepared several lectures on the first head of the first division, namely, On the influence of food on the health, and the means of detecting and preventing its adulteration.

29*th September*, 1826. (Signed) R. Christison.

The course of Military Surgery embraces an extensive range of the most important surgical subjects, and especially those accidents and diseases to which soldiers and seamen are peculiarly exposed.

There are now three Classes taught by the Professor of Greek.

In the *Junior Greek Class*, the rudiments of the language are taught, and portions of the Greek Testament, of Xenophon's Cyropædia, Lucian's Dialogues, a few Odes of Anacreon, and part of the First Book of the Iliad, are read and analyzed. The students are examined on the first part of the Professor's Exercises and give up exercises once every week.

In the *Second* or *First Private Class*, extracts from Xenophon, Herodotus, Plato, with a portion of the Iliad, are read by the students, and they are rigorously examined upon every portion of the lessons. The second part of the professor's exercises is also read by the class. The students are required to give up, once every week, translations from Greek into English, and from English into Greek. A portion of these exercises is examined and corrected by the professor himself, who returns them to their respective authors, and they again are directed to examine the rest, and to give up a report to the professor in what manner they have been executed. Subjects for short essays are occasionally prescribed. These are examined by the professor himself, who makes his remarks upon them.

In the *Third* or *Second Private Class*, the higher authors are read, as Demosthenes, Thucydides, the tragic and comic poets, Theocritus, Pindar, &c. Exercises, consisting of translations from English into Greek prose and verse, are prescribed every week. They are examined and corrected in the same manner as those in the second class. Subjects for English and Greek essays are occasionally prescribed; and after examination, the best and most correct of them are read in the class-room in presence of the students.

Lectures are given twice in the week, on the Wednesdays and Saturdays. The Saturday lecture is at an extra hour, and was commenced by the present professor two years ago. The lectures on the Wednesdays are chiefly intended to be connected with the subjects read in the second and third classes. They consist, first, of observations on the nature and laws of epic poetry, with an analysis of and critical remarks on the Iliad of Homer—on eloquence—the history of that art among the ancients and moderns, and a critical analysis of Æschines's speech against Ctesiphon, and of Demosthenes for the Crown—on the origin, history, and nature of tragedy, and a critical analysis of several of the Greek plays. Second, on the antiquities and institutions of the Greeks, and on the Athenian and Lacedemonian constitution and government. Third, on the philosophy of the Greeks; with an account of the tenets and doctrines of the principal sects among them.

These Lectures are generally varied in the course of two Sessions, and are intended to prepare the Students for the Logic and Rhetoric Classes. The lectures given on the Saturdays, for the space of three months, are open to all the Students of Greek indiscriminately, and are entirely new in this University.

They consist of observations on General Grammar, on the Structure of the Greek and Latin Languages, with an Analysis on the terminations of Nouns, Adjectives, and Verbs, and a comparison of them with those of the Sanscrit and Teutonic, with a view of ascertaining their origin, and illustrating the general principle of analogy which has regulated this part of the mechanism of human speech.

The Mathematical* Course is divided into three Classes, each of which generally occupies the attention of the students one year.

In the First Class are taught the Elements of Euclid, Plane Trigonometry, the Mensuratior of Surfaces, and of Heights and Distances.

The Second Class study Algebra, with its various applications, the Calculus of Sines, the Conic Sections, Solid Geometry, Spherical Trigonometry, Dialling, and as many more branches as can be overtaken in the course of the session.

In the Third Class some of the above branches are resumed and extended, but the main object is the Differential Calculus, or doctrine of Fluxions, with its applications.

The Lectures on Logic are divided into four parts. The first part consists of a view of Intellectual Philosophy, or a description of the faculties by which we acquire the elements of our knowledge, the laws which regulate their operation, and the imperfections to which they are liable, with hints for their improvement.

The second part comprehends the Theory of Evidence, and includes a view of Demonstrative

* *On the Table of the Commission.*—Account of the Professorship of Mathematics in the University of Edinburgh, by Professor Wallace, presented 16th October, 1826.

Evidence, of the Evidence of Sense, Consciousness, Memory, Testimony, Experience, Analogy, Mixed Mathematics, and the Calculation of Chances.

The third part includes Reasoning, and explains—1st, Syllogistic Reasoning, with the various abridged modes of it in common use, and the Sophisms or Fallacious Reasonings connected with it; and—2nd, Inductive Reasoning, and a view of the *Prejudices* which are apt to mislead the mind.

The fourth part explains the Analytical and Synthetical *Method* of conducting our reasonings, as well as the Socratic and Controversial Method, and the Principles of Interpreting Written Documents.

The Course concludes with a view of the Theory of Language, or Principles of Universal Grammar.

The Professorship of Rhetoric and Belles Lettres was instituted in order to convert the Art of Criticism, which had hitherto rested on the authority of illustrious names and classical works, into a science, by referring the productions of genius in all the departments of elegant design to those operations and laws of our sensitive and intellectual nature, to which everything that aspires to please must be accommodated.

From the low state of grammatical instruction in this part of the island, and the local and provincial idioms prevalent in the works even of the learned, much of the professor's time was most profitably employed in minute remarks on the choice of words, the structure of sentences, and the errors or inadvertencies which obstructed the perspicuity of composition. The subject has since taken a higher range; and the present professor has laboured, in all the branches of his Course, to keep pace with the progress of improvement.

As the Class was appointed to be a practical School of Composition, as well as a separate department of Philosophical Instruction, the Professor gives out three distinct series of Exercises every year, directly relating to the subjects illustrated in the Lectures. In this part of his duty he has experienced some difficulty. Students attend the Class at those periods of their Philosophical or Theological course most convenient to themselves; and from the diversity in age and progress, it is expedient to leave room for the exercise of choice. In the last series of Exercises the subjects of the Prize Essays are given out; and there are occasional Public Readings of productions of superior merit.

The Professor of Moral Philosophy has not yet published any Synopsis or Prospectus; but at the commencement of each Session he delivers three Lectures, containing a full and minute analysis of his course.

An Historical Sketch is then given of the influence of moral Science on the well-being of States, on the Government, Legislation, Literature, and National Character.

The Nature and the Laws of the Inductive Philosophy, or Baconian Method, are then explained, and an attempt made to shew the difference of its instruments and results, when applied to physical and moral subjects.

The Lecturer proposes to inquire, *first*, into the nature of the Human Being; *secondly*, into the relations in which that Being is placed; *thirdly*, into the duties deduced from that nature and those relations; and, *fourthly*, into the means by which individuals and nations may promote and guard their virtue and their happiness.

Man is considered as a physical, intellectual, moral, and spiritual being.

The influence of his Physical Structure on all his thoughts and feelings is illustrated and analyzed. The Appetites and the Senses are treated of, and a basis laid for the Theory of Perception.

Many distinguished Metaphysicians have represented the Mind as consisting of a great number of separate faculties. That doctrine is opposed, and an attempt made to simplify the action of the Mind.

The Mind is endowed with a perceptive and reproductive and an intellective faculty. It exists also in a state called Imagination, a peculiar combination of thought and feeling. This view is elucidated in a series of Lectures.

From the physical and intellectual nature of Man, the lecturer passes to the moral, and gives an account of all the most celebrated theories of ancient and modern times. In conclusion, he gives his own theory.

From these speculations and discussions on the nature of the moral sense, the moral faculty, the moral reason or conscience, the Lecturer leads his Students to the consideration of the Passions. Here a vast field of inquiry presents itself; and upwards of twenty lectures are allotted to the analysis of the Passions, their influence on virtue and happiness, their extraordinary combination in the same or different minds, and the various forms and characters they present in various states of social life.

Having thus treated of Man as a physical, intellectual, and moral being, the Lecturer concludes the first division of the Course by speaking of his spiritual nature. Here he treats of the Immateriality and Immortality of the Soul.

In the second division of the Course, the Lecturer inquires into the relations in which the human being is placed; and in the third division into his duties. These two divisions are found to run into one. To his Creator he stands in the relation of a creature; and here, therefore, is the place of Natural Theology.

His relations to his fellow-creatures, and the duties belonging to those relations, appear from considering him as the member of a family, and as the subject of a state.

In treating of the duties man owes to his Maker, there is danger of trespassing on the province of the Theologian; and in treating of the duties man owes to man, there is danger of running at too great length into Practical Ethics. Therefore, in the first case, the lecturer confines himself to an elucidation of the argument *a priori* and *a posteriori* in proof of the being and attributes of the Deity—to a refutation of the reasonings of the Sceptics—the existence of evil—and the question of liberty and necessity; and in the other, without neglecting Practical Ethics, he directs his chief attention to the great metaphysical questions that have been debated concerning the grounds of moral obligation. All the chief systems of ancient and modern writers are made to pass in review—their merits and defects pointed out; and finally, the lecturer delivers his own opinion on that subject.

In the fourth division of the course, it is the object of the lecturer to explain the means by which individuals and nations may promote and guard their virtue and their happiness; and here he treats of the power of self-judgment, and of self-control, and of the due regulation and subordination of all the conflicting principles of human nature to the moral laws. With respect to states or communities, he endeavours to explain the origin of governments and societies, the causes which produce different forms of government, and to balance their advantages or disadvantages. He endeavours to trace the

795
University of Edinburgh.
Appendix. Order XV.

rise and progress, and to delineate the character of various institutions influential on the well-being of nations. The theory of Population, the Poor Laws, the Penal Laws, &c., come under review, and many subjects included under the comprehensive term Political Economy.

The Professor of Natural Philosophy distributes his course under twelve heads:—

1. Somatology, or the General Properties of Bodies.
2. Statics, or the Conditions of Equilibrium.
3. Phoronomics, or the Laws of Motion.
4. Physical Astronomy.
5. Mechanics.
6. Hydrostatics.
7. Hydrodynamics.
8. Pneumatics.
9. Photonomics, or the Doctrine of Light.
10. Pyronomics, or the Properties of Heat.
11. Magnetism.
12. Electricity.

In treating these subjects, he avails himself of every occasion to expound the abstract principles, and to throw light on the operations of nature and the practice of the arts. He follows strictly the method of induction, traces the progress of discovery, and having investigated the principles, he draws the great results, which he confirms and illustrates by the exhibition of numerous and choice experiments. The science of physics, however, has become so extensive, that he finds more difficulty every year in comprising the whole in a single course. To comply with custom, he is obliged to treat some of the subjects in a more concise way than their importance would demand.

Syllabus of Lectures on Natural History.

My course of lectures on Natural History embraces general and particular details and views in Meteorology, Hydrography, Mineralogy, Geology, Botany, and Zoology. These subjects are discussed in the following order:—

I. Meteorology.

I. General Observations on the Atmosphere, and its particular Natural History, in the following order:—1. Pressure—2. Height—3. Form—4. Temperature, and as connected with it, general and particular observations on the effects of heat and cold on the physical and geographical distribution of plants and animals—5. Colour—6. Light—7. Transparency—8. Composition.

II. Atmospheric Meteors.

1. Aqueous Meteors, Evaporation, Dew, Fogs, Clouds, Rain, Sleet, Hail, Snow.

2. Luminous Meteors. *a.* Rainbow, Halo, Corona, Parhelion, Paraselene. *b.* Shadows, Looming, Fata Morgagna, Mirage. *c.* Luminous Arch, Aurora Borealis. *d.* Atmospherical Electricity, Thunder and Lightning, St. Elm's Fire or Castor and Pollux. *e.* Fire-balls, and the Stones that fall from the Heavens, Falling Stars, Zodiacal Light.

3. Winds in general—Force, Velocity, Direction, Trade-winds, Monsoon-winds, Sea and Land Breeze, Etesian-winds, Oonithian-winds. *b.* Squall, Hurricane, Typhoon, Tornado. *c.* Sirocco, Solano, Kamsin, Harmattan.

4. The Subterranean and Submarine Atmospheres.

5. Prognostications of the Weather from phenomena of the atmosphere, animals, plants, and minerals.

6. Climate. Climate in general—its different kinds, according to situation and latitude; its effects on animals, especially the human race, illustrated by a reference to the distribution of man, and the characters of many diseases.

Authors noticed.

II. Hydrography.

Observations on the importance of Water in the economy of nature, and to mankind: then detailed descriptions and histories of water in its various states, conditions, and situations, in the following order:—

A. *Ocean.*

* 1. Colour—2. Temperature—3. Luminousness—4. Depth—5. Level—6. Saltness—7. Sea Ice.

* * 8. Motions. *a.* Motion of the Waves. *b.* Motion from east to west between the Tropics, including descriptions of the Gulph Stream and other great currents connected with the great equinoctial current—upper and under currents, &c.—*c.* Whirlpools—*d.* Tides, their phenomena and history. Observations on oceanic scenery and climate, and effects on man.

B. *Springs.*

1. Different kinds of Springs, viz. temporary, perennial, intermittent, periodical, spouting—2. Magnitude—3. Temperature, including account of cold, warm and hot Springs—4. Colour—5. Geognostical Situation—6. Estimate of the annual quantity of mineral matter brought from the interior of the earth by springs, and deposited by them on its surface—7. Constituent Parts—8. Medicinal Springs—9. Theory of Springs.

C. *Lakes.*

1. Different kinds of Lakes—2. Magnitude—3. Depth—4. Temperature—5. Colour—6. Occultation—7. Agitations—8. Water of Lakes, according to which they are divided into fresh water, salt water, alkaline lakes, &c.—9. Formation of Lakes—10. Emptying of Lakes by natural means—11. On Lake Scenery and Climate, and their effects.

D. *Rivers.*

1. Different Classes—2. Direction—3. Fall—4. Velocity—5. Eddies, Freshes, Bore—6. Beds of Rivers—7. Inundations—8. Occultations—9. Magnitude—10. Temperature—11. Cascades—12. Water, its varieties and composition—13. River Scenery and Climate, and their effects.

III. Mineralogy.

This branch of Natural History, which makes us acquainted with the various natural and economical relations of Simple Minerals, is treated in the following manner:—

1. Explanation of the Language of Mineralogy. My Treatise on the Characters of Minerals as text-book.

2. History and account of the Systems of Mineralogy.

University of Edinburgh.

Appendix. Order XV.

3. Description of Simple Minerals, according to the system of my printed works, viz. Manual of Mineralogy, System of Mineralogy, 3 vols.

4. Their various uses in medicine, agriculture, the arts, &c., and in the economy of nature.

5. Physical and Geographical Distribution of Minerals.

IV. Geology.

This branch of Natural History treats of the Structure and Composition of the solid mass of the Earth, and also considers its mode of Formation. The general Cosmical Properties of the Globe, it-connection with the Planetary System, and that of the Universe, are also subjects of interesting diss cussion in my Geological Lectures. The following is the order of the Lectures:—

1. Account of the Physiognomy of the Earth, including descriptions of High Lands and Low Lands, Plains, Groups of Mountains, Chains of Mountains, and Single Mountains—of the different kinds of Valleys, and of the Inequalities of the Submarine Land.

2. Account of the different kinds of Structure observable in the solid mass of the Earth.

3. On the Materials of which Mountain Rocks are composed.

4. Description of the Different Classes of Mountain Rocks, beginning with the deepest seated or oldest, and terminating with the uppermost or newest.

5. Description of the Species of Mountain Rocks, their various natural relations, and their use in the economy of nature and to mankind.

6. On Veins, and as connected with this subject; details in regard to the distribution of Metalliferous Minerals.

7. The Phenomena and Effects of Volcanoes.

8. Descriptions and Arrangement of Soils, or those loose superficial matters that cover the solid strata, and in which plants grow, and many animals live.

9. On Fossil Organic Remains, especially their Geognostical Distribution in the Crust of the Earth, and the connection by their distribution with the state of the Earth during the different periods of its formation.

10. On the Shape, Magnitude, Heat, Electricity and Magnetism of the Earth.

11. On the Formation of Mountains, Valleys and Plains, in reference to the various Phenomena exhibited by the Earth's Physiognomy.

12. Theory of the Earth, as deduced from the facts and views in the previous part of the Course.

13. On the Deluge and Age of the World.

14. On the Earth, as a Member of the Planetary System—Comparison of its Form, Magnitude, Surface, Light, Atmosphere, and Changes, with those which have been observed in other parts of the Planetary System, especially in the Moon and Sun.

15. On the Planetary System, as forming a part of the Milky Way—of the Connection of the Via Lactea, with other similarly constructed parts of the Sideral System, and of the connection of these with the grand framework of the Universe.

a. On the Geognostical Structure of Scotland, England, and Ireland—*b.* Modes employed in searching for useful Minerals—*c.* Mode of conducting Mineral Surveys, and of constructing Geognostical Sections and Maps.

V. Botany.

In the view of Botany given in this Course, the attention is principally directed to those general details and views which are connected with and illustrative of the other departments of Natural History. It is treated in the following order:—

1. General Account of the Structure and Physiology of Plants.

2. On the Physical and Geographical Distribution of Plants over the Globe.

3. On the Fossil Plants met with in rock formations of different descriptions.

4. Comparison of the present Distribution of Plants, with that exhibited in the Fossil Plants.

5. Deductions illustrative of the Gradual Change in the Heat of the Earth, and of alteration in its Climate, as disclosed by the facts in the Physical and Geographical Distribution of Living and Fossil Plants.

6. On the Connection of the Geography of Plants with the Political and Moral History of Man.

7. On the influence which the Phenomena of Vegetation exercises on the Taste and Imagination of Nations.

8 On those grand general relations of the Vegetable Kingdom, which stand in connection with the Animal and Mineral Kingdoms.

VI. Zoology.

This branch of Natural History is considered in the following order. After explaining the systems of arrangement proposed by Zoologists, and stating my own method, I then proceed to treat of the different Classes of Animals, beginning with those which have the most perfect structure, and concluding our Zoological Descriptions and Histories with an account of the least perfect or most simple animals.

As the Human Species stands apart from all the other Animals of the Zoological System we begin with the

Natural History of Man.

1. General view of the Structure of Man.

2. Physiological relations of Man.

3. Man traced through his first period of existence, or from his Monadal State, to the period of his birth.

4. Characters by which Man is distinguished from the lower animals.

5. Division into Male and Female—the general and particular characters of each.

6. There is but one species of Man.

7. The Species Man is divided into Races, Sub-races, Kinds, Families and Varieties. These defined and described.

8. Man considered as to Colour, Stature, Size, Strength, Longevity.

9. Man traced from the period of his birth through the different stages of his second existence, until his career terminates in this Planet.

10. Geographical Distribution of Man.

11. Physical Distribution of Man.

12. Population of the Globe.

13. Age of Man—1. Historically considered—2. Geologically considered.

797
University of Edinburgh.

Animals divided into Vertebrate and Invertebrate.

* Vertebrata.

Class I. Mammalia.—Including Quadrupeds and Cetaceous Animals. 1. Osseous System—2. Muscular System—3. Circulating System—4. Respiratory System—5. Digestive System—6. Urinary System—7. Generative System—8. Organs of the Senses—9. Nervous System—10. Cutaneous System, its varieties and kinds—11. Organs of Locomotion—12. Generation—13. Hybrids—14. Hybernation—15. Longevity—16. Number—17. Uses in the Economy of Nature—18. Migrations—19. Geographical and Physical distribution—20. Domestication—21. Dietetical uses—22. Diseases.

Account of the Characters used in the description, arrangement, and determination of Species.

Then follows an account of the Orders, Genera, and Species, as far as it is necessary for the Student.

Description and History of the different Species of Fossil Mammalia.

Class II. Aves.—1. Osseous System—2. Muscular System—3. Circulating System—4. Respiratory System—5. Digestive System—6. Urinary System—7. Generative System—8. Organs of the Senses—9. Nervous System—10. Cutaneous System—11. Organs of Locomotion—12. Generation—13. Hybrides—14. Hybernation—15. Longevity—16. Number—17. Nidification—18. Pairing—19. Geographical and Physical Distribution—20. Uses in the Economy of Nature—21. Domestication—22. Dietetical Uses—23. Diseases.

I. Account of the Characters used in the description, arrangement, and determination of Species.
II. Account of the Orders, Genera, and Species, as far as is necessary for the Student.
III. Description and History of the Genera and Species of Fossil Birds.

Class III. Amphibia.—1. Osseous System—2. Muscular System—3. Circulating System—4. Respiratory System—5. Digestive System—6. Urinary System—7. Generative System—8. Organs of the Senses—9. Nervous System—10. Cutaneous System—11. Organs of Locomotion—12. Generation. 13. Hybernation—14. Longevity—15. Number—16. Geographical and Physical Distribution—17. Dietetical Uses—18. Uses in the Economy of Nature.

I. Account of the Characters used in the description, arrangement, and determination of Species.
II. Account of the Orders, Genera, and Species, as far as is necessary for the Student.
III. Description and History of the Genera and Species of Fossil Amphibia.

Class IV. Pisces.—1. Osseous System—2. Muscular System—3. Circulating System—4. Respiratory System—5. Digestive System—6. Urinary System—7. Generative System—8. Organs of the Senses—9. Nervous System—10. Cutaneous System, its kinds and varieties—11. Organs of Locomotion—12. Organs of Reproduction—13. Electrical Organs—14. Longevity—15. Number—16. Physical and Geographical Distribution—17. Migrations—18. Uses in the Economy of Nature—19. Domestication—20. Dietetical Uses—21. Diseases.

I. Account of the Characters used in the description, arrangement, and determination of Species.
II. Account of Orders, Genera, and Species, as far as is requisite for the Student.
III. Description and History of Fossil Fishes.

* * Avertebrata.

Class I. Mollusca.—1. Cutaneous System, with Account of the mode of Formation of shells—2. Muscular System—3. Circulating System—4. Digestive System—5. Respiratory System—6. Generative System—7. Organs of the Senses—8. Nervous System—9. Organs of Locomotion—10. Number—11. Physical and Geographical Distribution—12. Uses in the Economy of Nature—13. Domestication—14. Dietetical Uses.

I. Account of the Characters used in the description, arrangement, and determination of Species.
II. Account of the Orders, Genera, and Species, in as far as is necessary for the student
III. Description and History of Fossil Mollusca.

II. Insecta.—1. Cutaneous System—2. Muscular System—3. Circulating System—4. Respiratory System—5. Digestive System—6. Generative System—7. Organs of the Senses—8. Nervous System—9. Organs of Locomotion—10. Number—11. Longevity—12. States of Insects—13. Societies—14. Noises—15. Luminosity—16. Hybernation—17. Instincts—18. Geographical and Physical Distribution—19. Uses in the Economy of Nature—20. Domestication—21. Dietetical Uses—22. Diseases—23. Diseases in Man and other Animals, also in Plants, occasioned by Insects.

I. Account of Characters used in the description, arrangement, and determination of Species.
II. Account of Orders, Genera, and Species, as far as is necessary for the student.
III. Description and History of Fossil Insects.

III. Arachnidæ.—1. Form and Structure—2. Functions—3. Geographical and Physical Distribution—4. Instincts—5. Food.

I. Account of Characters used in the description, arrangement, and determination of Species.
II. Account of Orders, Genera, and Species, as far as is necessary for the student.
III. Description and History of Fossil Arachnidæ.

IV. Crustacea.—1. Form and Structure—2. Functions—3. Geographical and Physical Distribution—4. Instinct—5. Food—6. Relation of the Sexes—7. Dietetical Uses.

I. Account of Characters used in the description, arrangement, and determination of Species.
II. Account of the Order, Genera, and Species, as far as is necessary for the student.
III. Description and History of Fossil Crustacea.

V. Radiaria.—1. Form and Structure—2. Functions—3. Geographical Distribution—4. Instincts—5. Food.

I. Account of Characters used in the description, arrangement, and determination of Species.
II. Account of the Orders, Genera, and Species, as far as is necessary for the student.
III. Description and History of Fossil Radiaria.

VI. Annularia.—1. Form and Structure—2. Functions—3. Geographical and Physical Distribution.

I. Account of Characters used in the description, arrangement, and determination of Species.
II. Account of Orders, Genera, and Species, as far as is necessary for the student.
III. Description and History of Fossil Annularia.

VII. Enthelmintha.—1. Form and Structure—2. Functions—3. Distribution—4. Food—5. Their connection with Diseases in Man and other Animals.

University of Edinburgh.

Appendix. Order XV.

I. Account of Characters used in the description, arrangement, and determination of Species.
II. Account of the Orders, Genera, and Species, as far as is necessary for the student.

VIII. Protozoa.—1. Form and Structure—2. Functions—3. Geographical and Physical Distribution—4. Uses and Importance in the Economy of Nature.

I. Account of Characters used in the description, arrangement, and determination of Species.
II. Account of the Orders, Genera, and Species, as far as is necessary for the student.
III. Description and History of Fossil Protozoa.

PHILOSOPHY OF ZOOLOGY.

2. Their different Modes of Generation, stated with the view of illustrating the Theory of Generation in the Animal Kingdom in general.
3. The Growth of Animals.
4. The Decay and Death of Animals.
5. Duration of Animals.
6. Migrations of Animals.
7. Number of Animals.
8. Instinct in general.
9. Hybernation.
10. Distribution of Animals, both physical and geographical, over the surface of the earth, in the waters of the ocean, in lakes and rivers, and in the air of the atmosphere.
11. The various Revolutions or Changes the Animal World has experienced, from its first creation to the present time.
12. The Connection of the Animal with the Vegetable Kingdom.
13. The Connection of the Animal and Vegetable Kingdoms with the Mineral Kingdom.
14. *Lastly*, The mutual relations that exist amongst all the objects of nature, and those general laws that appear to be common to the whole.

CONCLUSION.

1. Instructions and Demonstrations as to the mode of collecting, preserving, transporting, and arranging objects of Natural History.
2. Collecting of objects of Natural History strongly recommended.
3. Advantages of Travelling.
4. Books in different branches of Natural History recommended.
5. Plans for future Study in Natural History pointed out and explained.

MEMORANDUM.

The progress of the pupils in their studies, is ascertained by conversations in the museum, and by written optional exercises. The professor, still further to secure the attention of the students, and also to afford them the means of becoming practically acquainted with many of the subjects explained during the course of the lectures, makes along with them frequent excursions into the neighbouring districts; and when circumstances allow of it, even to distant parts of the country. These walking and sailing excursions form a peculiar and most useful part of the system followed in the Natural History Class. Although the professor is generally accompanied in his expeditions by the greater number of his pupils, no confusion arises; on the contrary, the information is equally shared by all, and a universal feeling of satisfaction and delight is the constant result of these peripatetic excursions.

ROBERT JAMESON,
Regius Professor of Natural History.

Extracts from the Return of the Professor of Agriculture.

"The Class for Agriculture was instituted by the late William Pulteney (afterwards Sir William Pulteney, Bart.) with the consent and approbation of the Town Council of Edinburgh, and I was admitted professor in 1790. The class was attached to the Faculty of Arts by the Senatus."

"The subjects of the course of study embrace all that relate to agriculture and the management of live stock, with various discussions relating to rural economy. The whole is tried to be completed in one course, but being very extensive, the subjects are in different seasons treated at different lengths—some on crops in agriculture being fuller one season, and others on live stock, &c., fuller in another season. All, to the length possible, are touched on, and the course has often included 140 hours of lecturing, seldom less than 130."

"The salary of the Class for Agriculture, &c., is 50*l.*, from 1250*l.* given by the late Sir William Pulteney, Bart."

"The fees were fixed as a *minimum* at one guinea, leaving those who chose to give more. Two or three guineas were generally given unasked; and in 1812, they were made by the town council four guineas. Ever since they have been four guineas, but not more. (I left students to give what they chose, but never took more than four guineas.) No other fees were asked or given with my knowledge or consent, excepting something to the library. I paid Mr. Wilson for the coal fires, and the students for such were not charged anything."

"All farm servants and young students in divinity, when I knew the attendants to be such, were made welcome to tickets without any payment to myself; and when they paid nothing, I did not think it of moment to return their names to the librarian."

"During thirty-five years I have delivered thirty-one or thirty-two courses, having had several summer courses and winter courses in the same year, and having of late had no summer courses, and in alternate years only winter ones. The reasons for the less frequency have been my unavoidable calls to London in spring on entail exchanges and sales, and other bills before Parliament, and the number of students having become smaller, since agriculture became less flourishing than in former years.

"No preliminary course of study is ordered or deemed requisite. But I have generally wished the students to have attended chemistry, botany, natural history, and mechanical or natural philosophy, *before* coming to the class for agriculture; and many students have taken my advice, and delayed a year

for attending them, particularly the two first-mentioned classes, and all who did so were thankful for my advice to them."

"The lectures are delivered at three, P. M. No examinations of the students; but they have been asked to write on any subject they heard discussed by me, or thought connected with the subject, and I have gotten many good papers; the general nature of which I afterwards mentioned to the class, with any remarks which I deemed requisite. Instead of examining the students, I begged the favour of them asking of me any thing they were at a loss about, and many of them obliged me by doing that very frankly."

"There are no prizes and no funds for prizes mortified, as far as I can state from memory."

"I once had 73 students; for 10 years, 52; for 10 years, 41; and for the last 10, about 30, or a few more who paid fees.

(Signed) "A. COVENTRY."

Return by the Town Council.

PROCEEDINGS OF THE TOWN COUNCIL IN REGARD TO PROPOSED CHAIR OF SURGERY.

Act of Council appointing Dr. Monro to be Professor of Medicine, Anatomy, and Surgery.

Edinburgh, 16th *July*, 1777.

16 July, 1777. The Council having heard read the representation and petition of Dr. Monro, with concurrence of the Principal and all the medical professors of the University, setting furth, that near sixty years ago the magistrates of Edinburgh appointed professors to teach the several branches of medicine, on the plan of the then most celebrated University of Leyden; that in that year 1720, his father was elected Professor of Anatomy, and he, in imitation of the practice at Leyden, then taught, and from that time continued to teach, yearly, anatomy and surgery, in one connected course of demonstrations and lectures, and was universally considered as professor of both branches; that in the year 1754, he was appointed his father's colleague and successor, and from the year 1759 had conducted the whole course of lectures, and assisted and continued to adopt the general plan pursued by his father, comprehending surgery with anatomy; that the teaching surgery has been understood to belong to his office, yet the commission granted to him and his father as joint Professors of Anatomy, makes no mention of surgery, probably resulting from the supposition that it was comprehended under that of anatomy,—and hoping that the magistrates would grant him a new commission, expressly bearing him to be Professor of Medicine, and particularly of Anatomy and Surgery: which being considered by the magistrates and council, and being highly sensible of the great merit of Dr. Monro, and the singular use he has been of to this University, they unanimously elect Dr. Alexander Monro to be Professor of Medicine, and particularly of Anatomy and Surgery, in this University, and that *ad vitam aut culpam*, and appoint their clerks to make out his commission accordingly; but reserve power to the Council and their successors in office to separate the offices of Professor of Anatomy and Surgery at any time after the decease of the said Dr. Alexander Monro, if they shall find it proper, or for the interest of the University, to do so.

Excerpt from Appointment of Drs. Monro, Senior and Junior, as Professors of Anatomy, &c.

Edinburgh, 14*th November*, 1798.

14 November, 1798. All which being taken under consideration, the Council rescinded the aforesaid act of Council, in so far only as respects the appointment of Dr. Alexander Monro, junior, but confirms the said act of Council in other respects, as tending to the getting a greater choice of candidates upon a vacancy; and the Council, in this instance, elect, nominate, and appoint Dr. Alexander Monro, senior, and his son Dr. Alexander Monro, junior, to be joint Professors of Medicine, Anatomy, and Surgery, in the College of Edinburgh, *ad vitam aut culpam*, with the benefit of survivancy to the longest liver, upon the conditions following, viz.—

Primo, That the said Dr. Alexander Monro, senior, or Dr. Alexander Monro, junior, or one or either of them, shall officiate and give regular lectures as formerly, at the usual stated times in the year.

Secondly, It is hereby declared, that the saids Dr. Alexander Monro, senior, and Dr. Alexander Monro, junior, and the survivor of them, shall be subjected and liable to such rules and regulations as the magistrates and council have already made, or may hereafter make, with respect to the said office; hereby giving, granting, and disponing to them, or survivor of them, the fees and emoluments appertaining to the said office; and appointed the clerks to extend a commission in favour of Dr. Monro, senior, and Dr. Monro, junior, in the terms before mentioned.

Report by the College Committee, and Deliverance of Council, regarding the Teaching of Surgery.

Edinburgh, 4*th September*, 1827.

4 September, 1827. The Council, on the 7th of February, remitted to the College Committee, to inquire and report as to the propriety of separating the teaching of surgery from that of anatomy, both these branches of medical instruction being at present taught in the University by the same professor.

The College Committee, in compliance with this remit, have carefully considered this important subject, have consulted the records of the Council relating to the first erection of the Anatomical Chair, and the subsequent changes in its constitution, of which the conjunction of surgery with anatomy in one professorship is the most important.

From the consideration of these documents, from the practice of other medical schools, and from the recorded opinions of professional men who have directed their attention to the subject of medical education, your Committee feel justified in stating, as their opinion,—

1st. That anatomy and surgery each afford ample employment for a separate professor, and that the conjunction of these two important branches must be injurious to the usefulness of the teacher, the interests of the student, and to the advancement of medical science.

It is universally admitted that anatomy, as the basis of medical knowledge, requires the undivided attention of its professor or teacher; and it is not less apparent that surgery, from its extent and importance as a branch of medical science, demands a full and separate course of instruction.

2nd. That different qualifications are necessary for the successful teaching of these respective

University of Edinburgh.

Appendix. Order XV.

branches, more especially of surgery, the principles and practice of which can only be successfully taught by one engaged in its exercise as a practitioner.

From these considerations, your Committee would have deemed it their duty to have recommended the immediate separation of the teaching of surgery from that of anatomy, and the erection of a separate professorship of surgery in the University, had there been no ambiguity in the import of the commission granted to the present Professor of Anatomy, the clause appended to the commission granted to Dr. Monro, the father, in 1777, " reserving to the council, and their successors in office, the " power to separate the offices of professor of anatomy and surgery, at any time after the decease of the " said Alexander Monro, if they shall find it for the interest of the University to do so," not having been repeated in the joint commission granted to Drs. Monro, senior and junior, in 1798.

But your Committee are decidedly of opinion that the council, as patrons of the University, and deeply interested in its welfare and public utility, should now resolve that they will avail themselves of the first opportunity that offers itself, to disjoin the class of anatomy from that of surgery, and to erect a professorship of surgery in the University.

The Committee further recommend, that if the council shall approve of this resolution, the Act of council following thereon shall be communicated to the Royal Commission for visiting the Universities in Scotland.

(Signed) Adam Luke, *Preses.*

Council's Deliverance.

12th September, 1827.

12 September, 1827. The magistrates and council having resumed consideration of this report, approved of the same, and resolved in terms thereof; and in the view of carrying this resolution into effect, they appointed the Lord Provost, the First Bailie, Dean of Guild, and Convener, to confer with Dr. Monro, in order to communicate to him the views of the town council, and to ascertain how far the doctor was disposed to concur in the views of the council.

Minute of Council about proposed Surgery Chair.

Edinburgh, Nov. 7, 1827.

7 November, 1827. Read the following report by the committee appointed to confer with Dr. Alexander Monro, as to the propriety of erecting a separate professorship of surgery:—" Report by the Committee appointed by " the Council to meet with Dr. Monro, on the subject of separating the teaching of Surgery from that " of Anatomy in the University.—In consequence of the remit from the council to the Lord Provost, " Bailie Brown, and Convener Sawers, to meet with Dr. Monro, on the subject of separating the " teaching of surgery from anatomy, and carrying on the former as a distinct class, under a separate " professor, they appointed a meeting with Dr. Monro, and sent him a copy of the minute of council " on the subject to consider. They accordingly met, and stated fully to the doctor the advantages " which they considered would result to surgery, and medicinal science in general, and to this univer- " sity, by carrying on the study of surgery under a separate and distinct course of lectures, instead of " continuing to blend them with the course on anatomy; and that they believed they are borne out in " that opinion by the concurring testimony and experience of those persons who are best able to form " correct views on the subject. The doctor stated, he considered the two branches of study to be so " intimately connected, that it would be improper to disjoin them; moreover, that his lectures were all " formed upon the principle of combining the study of them, and that he had always made surgery form " a prominent part of his lectures, and of his operations upon the subjects on which he lectured;— " that he had a very extensive and expensive set of instruments, for the purpose of illustrating these " lectures: and that he considered it would materially injure his character and interests as a professor, " to consent to any separation of them." (Signed) " W. Trotter, *Lord Provost.*"—" We " think it right to add, that we requested Dr. Monro to state to the council in writing, at his earliest " convenience, any objections he had to the proposed measures." (Initialled) " W. T." (Dated) " *Edinburgh*, 28*th September*, 1827."——The magistrates and council directed a copy of the foregoing report to be transmitted to Dr. Monro, with a request that he would take the trouble to put together in writing, the remarks which he may have to make on the proposed change, and that with his earliest convenience.

Letter from Dr. Monro, in regard to proposed Surgery Chair.

Edinburgh, 7th December, 1827.

7 December, 1827. Sir,—I received your letter of the 29th November last, in which you call my attention to your letter of the 9th November, transmitting the copy of a Report by the committee of council of the 28th September last, regarding the mode of teaching surgery in the university—and requesting that I would put in writing any remarks which I might have to make on the proposed change; and you add, that the magistrates and council will consider themselves entitled to hold, that I admit the accuracy of the statements contained in the Report alluded to, unless I transmit to you the observations which you require.

Such a demand as this I was little prepared to expect; because you will find, in the Report alluded to in your letter, that there is engrossed a part of the answer which I made to the committee.

You will see, from the Commissions recorded in the council-books, that I hold an unqualified commission, *ad vitam aut culpam*, as professor of surgery as well as of anatomy.

Since my appointment, I have given lectures on both these branches, and the number of my pupils has considerably increased for the last ten years.

No one, I apprehend, can be entitled to interfere with, or dispose of the professorship, which I hold for life, under the commission which I had the honour to receive from the town-council, without my authority or consent; and as such consent has never yet been asked, it appears to be premature, to enter upon the discussion of the question brought forward in the Report, or to call upon me to furnish any remarks on the expediency or inexpediency of the proposed separation of the professorship of surgery from that of anatomy. It will be time enough to do so when a vacancy occurs.

Your obedient servant, (Signed) Alex. Monro.

David Beatson, Esq., *Council-Chamber, Edinburgh.*

Order XV*.—Information as to the Reasons for changing the Title of the Class of which Sir William Hamilton is Professor.

Return by the Senatus Academicus.

The Secretary of the University of Edinburgh has been unable to procure any information as to the reason for the change alluded to; but historically he has ascertained the following facts:— 23 October, 1826.

1. The first professor was Mr. Charles Mackay, who was appointed 28th August, 1719, and is styled Professor of *Universal* History. He is enjoined "to give lectures upon the History of Scotland in particular, and upon the Roman, Greek, and British Antiquities."

2. The next professor is Mr. William Wallace, appointed December 23, 1754. He is styled Professor of *Universal Civil* History, and Greek and Roman Antiquities.

3. The denomination of all the subsequent professors is the same, with the exception of Sir William Hamilton, who is styled Professor of *Civil* History, and Greek and Roman Antiquities; but the reason for this change, whether it arose from a clerical omission, or was intentional, does not appear.

Andrew Duncan, Jun.

College of Edinburgh, Oct. 23, 1826. *Sec. Un. Ed.*

Order XVI.—A Return of the Professorships in the College of Edinburgh, under which no Duty is performed, and no Lectures delivered; of the Salary or Emoluments, if any, attached thereto; and the Period when the Duty of the Class was discontinued.

Return by the Senatus Academicus.

ON THE TABLE OF THE COMMISSION.

Commission to Dr. Robert Blair, Professor of Astronomy in the University of Edinburgh, 28th September, 1785. 28 September, 1785.

1st. Practical Astronomy.—The salary of this Chair is 100*l.* a-year. The Professor has never lectured, for which he has assigned as a reason, that there is no observatory.

2nd. Public Law.—The salary is 280*l.* or 290*l.* a-year. The present incumbent has not delivered any lectures on public law. His predecessor gave a course of lectures in the year 1780 or 1781: but the study of that branch of law having fallen into neglect, he gave it up; and though in 1795 he resumed the subject, yet the result being the same, he, after giving a few lectures, desisted, so that there has been no regular course for about forty-six years.

Order XVII.—Is there any, and what general Course of Study, or Order, for the Attendance of Classes, prescribed for Students entering at the College of Edinburgh?—See Order XXXIII.

Return by the Senatus Academicus.

(1.)—There is no general course of study or order for the attendance of classes prescribed for students entering at the said college. But the attendance upon certain classes is necessary for certain professions, or acquiring certain academical degrees.

The course of preparatory study for those who are to become students of divinity, is fixed by the laws of the General Assembly. They must attend the Greek, Logic, Moral and Natural Philosophy classes four years, and each of these classes must be attended during a separate session. When they become students of divinity, they must attend three years regularly, and one occasionally; or two years regularly and three occasionally; or one regularly and five occasionally. No academical regulation on the subject.

The Society of Writers to the Signet require their apprentices to attend two classes, one of which shall be Humanity, before entering into indentures; and they require them to attend three courses of law, one of which shall be conveyancing, before being received on trial.

The courses of study for acquiring academical degrees are mentioned in return to Order XXXIII.

(2.)—Copy of the Regulations of the General Assembly with respect to Attendance at Divinity Hall.

Edinburgh, May 31, 1813.—*Sess. ult.*

The Report of the Committee appointed to class returns to overtures was produced and read; and now, finding that there is a majority of Presbyteries approving of the overtures anent licensing of probationers, the General Assembly did, and hereby do enact the said overture into a standing law of the Church. 31 May, 1813.

Act respecting the Licensing of Probationers.

The General Assembly having taken under their serious consideration the great danger to which the interests of religion and of this church may be exposed, by licensing any to preach the Gospel who are not duly qualified for that important trust, do hereby enact and ordain, that in all time coming the following regulations shall be strictly observed:—

I. It is hereby enacted, that no student shall be entered upon the roll of any professor of divinity, unless he shall produce to the said professor a certificate from the minister of the parish in which he has his usual residence; or in his absence, or during a vacancy in said parish, from some neighbouring minister, bearing, that his character is suitable to his views; together with a diploma of Master of Arts, or certificates from the several professors of philosophy under whom he had studied, from which it may be clearly ascertained that in some university or universities he had gone through a full course of philosophy in some winter sessions of college preceding that in which the certificates are produced.

University of Edinburgh.

Appendix. Order XVII.

31 May, 1813.

II. The General Assembly do likewise hereby ordain, that all students who have been enrolled by professors of divinity, in the manner prescribed by this act, shall continue to prosecute the study of divinity for the term of six sessions; provided always, that if any student hath given regular attendance in the Divinity Hall,* during three sessions, his course shall be considered as completed in four sessions; and that if he hath given regular attendance in the Hall during two sessions, his course shall be considered as completed in five sessions. And the Assembly do further ordain, that in each of these cases, students shall be enrolled by the professors during the several sessions of their respective courses, and deliver in the Divinity Hall, in the manner hereinafter provided, an exegesis in Latin on some controverted head in divinity, a homily in English, an exercise and addition, a lecture on some large portion of Scripture, and a popular sermon, together with such other exercises as the Professors shall think proper to prescribe. And the Assembly further enact and declare, that a student is entitled to apply to the Professor for his certificates, that he may be proposed for trials, and that the preliminary steps may be taken by the Presbytery, during the currency of the last session of his course, as above described; with this limitation, that if the said last session is to be claimed as a session of regular attendance, he shall, toward the conclusion thereof, obtain a new certificate of his attendance during its currency, and produce the same to the Presbytery or Synod.

III. Professors of Divinity are required to attend, as much as circumstances may permit, to the conduct of such students as are under their care; and, as far as they find it practicable, to insist that every student shall deliver his first discourse some time during his second session at the latest, and the remainder of his discourses at such periods as may enable him to deliver the whole of them before the end of January of the last session of his course.

IV. When a student is proposed to any presbytery, in order to be taken upon trials, the presbytery shall be alone, and the motion for that purpose shall lie upon the table till their next ordinary meeting. In the mean time, the presbytery shall appoint the member by whom the student has been proposed to lay before the said meeting the certificate or certificates in favour of the student that are specified in the third paragraph of the fifth section of this act, to desire him to attend the same, and to inform him that, previously to the meeting, he ought, as far as circumstances may permit, to wait on such ministers of the presbytery as have not formerly had an opportunity of conversing with him in private.

V. When the time appointed for considering the motion is arrived, the presbytery shall strictly observe the following regulations:—

1st. The presbytery shall be alone while they are employed in discussing the several preliminaries respecting students who are proposed for trials.

2nd. They shall require satisfying evidence, that every student who is proposed for that purpose has completed the twenty-first year of his age.

3rd. No student shall be admitted to trial unless he produces to the presbytery a certificate or certificates from the professor or professors of divinity under whose tuition he hath studied, bearing that he hath prosecuted his studies and delivered his discourses in the manner prescribed by this act; and that his conduct, as far as it consists with the knowledge of the said professor or professors, has been in every respect suitable to his views in life. And the General Assembly do likewise hereby enact, that the presbytery shall record, at full length, the said certificate or certificates in their minutes; and it is hereby enacted and declared, that the student, having lodged such certificate or certificates, shall be entitled to obtain extracts of the same, if demanded.

4th. No presbytery shall receive any student upon trials unless they are satisfied that he is of good report, sound in his principles, pious, sober, grave, and prudent in his behaviour; of a peaceable disposition, and well affected to the happy establishment of this kingdom, both in church and state; and that the presbytery may proceed with all due caution in a matter of such peculiar importance, they shall not agree to the motion in behalf of the student, unless his residence, during the year preceding, has been chiefly within their bounds, or he shall produce sufficient testimonials from the presbytery in whose bounds his residence has chiefly been during that term, bearing that his character is such as has been described in the immediately preceding sentence of this paragraph, and recommending him in those respects to the presbytery before whom the proposal is made, as a proper person to be entered upon trials.

5th. The presbytery shall not agree to the motion in favour of the student, unless they are satisfied that he has made a competent degree of proficiency in those several branches of knowledge which are necessary to enable him to be an useful preacher of the gospel; and the General Assembly ordain, that the presbytery, in order to procure full information in this respect, shall examine the student strictly and privately on his knowledge of the Greek and Latin languages, and of Philosophy and Theology.

6th. If, after these preliminary steps have been taken, the presbytery shall be of opinion, that the student is duly qualified in these several particulars, they shall record this opinion in their minutes, and order their clerk to write letters to the several presbyteries within the bounds of the provincial synod two calendar months at least before the meeting of the same, informing them of the presbytery's intention to take the student upon public trials; and bearing, that the certificate or certificates in his favour, which are required by this act, have been regularly laid before them; but it is hereby provided, that within the bounds of such synods as meet only once a-year, a student may be entitled to have these circular letters written half a year sooner than would be otherwise competent.

VI. The General Assembly do likewise hereby enact and declare, that at the request of the student, it shall be competent to any presbytery to transfer the receiving of the public trials, or any parts thereof, certifying to the presbytery to which the transference is to be made, that the various preliminary steps have been taken according to the directions of this act; and that such parts of the public and private trials as have been already gone through have been received with approbation.

VII. If a student have studied, either in whole or in part, in Protestant Universities, which are not within the bounds of this church, he shall, when he is proposed to any presbytery for trials, be required to produce satisfying testimonials from the professors of divinity in said universities; and the time which these professors shall certify to have been employed by him in studying divinity under their tuition, shall be computed in the same manner as if he had prosecuted his studies in any of the universities within the bounds of this church: but it is hereby provided, that no student in such circumstances shall be admitted even to those private trials, which are appointed to be taken before the writing of the circular letters, sooner than six calendar months after his arrival in Scotland.

VIII. The General Assembly ordain, that if a presbytery propose to take a student upon public

* On the Table of the Commission.—Letters from Drs. Baird and Buist, in regard to the regulations of Scotch Universities in convention, as to attendance at Divinity Hall, &c., and scrolls of several papers in relation thereto, 1827.

trials, and have, with that view, written the circular letters, as is herein required, public intimation thereof shall be made at some diet of the next meeting of the provincial synod, which shall not be the last diet thereof: and the presbytery-clerk is hereby required to transmit to the synod-clerk, an extract of the certificate or certificates laid before the presbytery in favour of the student, in order that the same may be produced at this diet of the synod. And it is likewise hereby ordained, that at some subsequent diet of the synod, particular inquiry shall be made whether any of the members of the court has any objection to offer against the student being entered upon public trials: and that the synod then, taking into consideration the extract produced, and the whole of the case, shall judge of the expediency of allowing the presbytery to admit the student on trials: or, if in any case the presbytery-clerk shall fail to transmit the extract of the certificates above mentioned, the student may produce to the synod, by himself, or by any member of the court, the extract of the same, which by this act he is entitled to obtain.

IX. If the synod shall allow the student to be taken upon public trials, the presbytery shall proceed therein with all convenient speed; and the Assembly appoint the following trials to be taken of the student, and in the order herein mentioned:—1st. Catechetic trials on Divinity, Chronology, and Church History; 2nd. A trial on the Hebrew and Greek languages; 3rd. An Exegesis in Latin on some controverted head in Divinity; 4th. A Homily in English; 5th. An Exercise and addition; 6th. A Lecture on some large portion of Scripture; 7th. A popular Sermon; it being understood, that if the presbytery see cause, they may examine the student upon the subject of these several discourses.

X. The student having gone through the several trials which are mentioned in the immediately preceding section of this act, the presbytery are ordained to proceed in the following order:—

1st. They shall deliberately and seriously take a conjunct view of the whole trials; and if they shall be of opinion that the student is not properly qualified to perform the duties incumbent upon a preacher of the gospel, they shall by no means grant him a license in his present circumstances.

2nd. If, upon this review of the trials, the presbytery are fully satisfied therewith, they shall record this opinion in their minutes.

3rd. The presbytery shall then propose to the student the questions that are appointed to be put to all who pass trials by Act 10, Assembly, 1711, and require him to subscribe the *formula*, which is prescribed by the said act. And the General Assembly strictly prohibit all presbyteries from licensing any student to preach the gospel, who shall not give explicit and satisfying answers to these questions, and subscribe the said *formula*.

4th. The presbytery shall order the act of Assembly, 1759, against simoniacal practices, to be read to the student in their presence.

Lastly. The presbytery shall appoint their moderator to license the student to preach the gospel, and ordain their clerk to furnish him with an extract of his license.

XI. For the better observance of this act, the General Assembly ordain—1st. That it shall be printed among their other printed acts; 2nd. That it shall be printed by itself in some convenient form; 3rd. That a copy of this separate edition shall be transmitted to each professor of divinity in the Universities of Scotland; and that the said professors shall read the same in their respective halls, once at least during every session, and at such times as they have reason to expect the attendance of the greatest number of students for that session; and *lastly*, That a copy of the same edition shall likewise be transmitted to the clerks of each synod and presbytery within the bounds of this church, and that the said clerks shall keep the same along with their minutes, and bring it up to each meeting of their respective courts, for the use of their members.

Overture as to the Course of Study to be pursued by Students of Divinity, 2nd June, 1823, which it is understood has since become a Law of the Church.

That it be enacted, with concurrence of the majority of the presbyteries of this church, that, in future, all students of divinity shall give at least one year of regular attendance; and that such year of regular attendance shall be the first, the second, or the third year of the course; the present law regulating the attendance remaining in other respects without alteration.

Order XVIII.—A Return of the Hours of teaching of each Professor in the College of Edinburgh; of the Manner in which his Class is taught, whether by Lectures or by Examinations; and, if partly by both, whether the Examinations take place during the same or extra Hours.

Return by the Senatus Academicus.

CLASSES.	Number of Hours in the Day.	Lecture or Examination.	Separate Hours for Examination.
Divinity	One; 5 days in the week; 6 months.	Lecture and Examination.	None.
Divinity and Ecclesiastical History	One; 5 days in the week; 6 months.	Lecture and Examination.	Usual meeting prolonged.
Hebrew	One; 5 days in the week.	Chiefly Examination.	None.
Civil Law — Institutes	One; 5 days in the week;	Lecture and Examination.	None.
Civil Law — Pandects	One; 4½ months.	Lecture and Examination.	None.
Scotch Law	One; 5 days in the week; 5 months.	Lecture.	
Conveyancing	One; 5 days in the week; 4½ months.	Lecture.	
Anatomy	1¼; 5 days in the week; 4 months.	Lecture and Examination.	One hour on Saturdays, during 6 months. The examinations in Latin or English.
Surgery	One; once in the week, for 4 months; 8 hours in the week, for 2 months.	Lecture and Examination.	
Chemistry	One.	Lecture.	

CLASSES.	Number of Hours in the Day.	Lecture or Examination.	Separate Hours for Examination.
Botany	One; many extra lectures; 5 days in the week; 3 months.	Chiefly Lecture.	None.
Materia Medica	One; 5 days in the week; 6 months.	Lecture.	
Theory of Medicine	One; many extra lectures; 5 days in the week; 6 months.	Lecture.	
Practice of Medicine	One; many extra lectures; 5 days in the week; 6 months.	Lecture and Examination.	One, frequently, but irregularly.
Clinical Medicine. Winter	One; twice in the week; 6 months.	Lecture.	
Clinical Medicine. Summer	One; twice in the week; 3 months.		
Clinical Surgery. Winter	One; twice in the week; 6 months.	Lecture.	
Clinical Surgery. Summer	One; twice in the week; 3 months.		
Midwifery	One; 5 days in the week; 6 months.	Lecture.	
Medical Jurisprudence	One; thrice in the week; 5½ months.	Lecture.	
Military Surgery	One.	Lecture.	
Humanity	Six months.	No return, the Professor being abroad in bad health.	
Greek. Junior Class	Two; 5 days in the week; 6 months.	Chiefly by Examination.	None.
Greek. 1st Private	One; 5 days in the week; 5½ months.	Lecture and Examination.	One on Saturday.
Greek. 2nd Private	One; 3 days in the week during the course, and 4 days for nearly 3 months.	Lecture and Examination.	One on Saturday for three months.
Mathematics. 1st Class	One; 5 days in the week; 5½ months.	Chiefly by Examination.	None.
Mathematics. 2nd Class	One; 5 days in the week; 5½ months.		
Mathematics. 3rd Class	One; 5½ months.	Almost entirely Lecture.	
Logic	One; 5 days in the week; 5½ months.	Chiefly Lecture.	None.
Rhetoric	One; 5 days in the week; 4 months.	Lecture.	
Moral Philosophy	One; 5 days in the week; 5½ months.	Lecture.	One on Saturdays for criticising Essays.
Political Economy	One.	Lecture.	
Natural Philosophy	One.	Chiefly Lecture.	One on Saturdays
Natural History. Winter	One; 5 days in the week; 5 months.	Chiefly Lecture.	None.
Natural History. Summer	One; 5 days in the week; 3 months.	Chiefly Lecture.	None.
Universal History	One.	Lecture.	
Agriculture			

In all the classes of the Theological Faculty, in Humanity, Greek, Mathematics, Logic, Rhetoric, Moral and Natural Philosophy, exercises or essays are occasionally required to be prepared at home, and delivered in writing to the respective professors.

The classes of Anatomy and Surgery, of Chemistry, Botany, Materia Medica, Midwifery, Military Surgery, Natural History, and Natural Philosophy, are taught by demonstration or exhibition of specimens, preparations, experiments, &c., as well as by lecture; and those in midwifery and natural history are occasionally at extra hours. The Professor of Natural History occasionally accompanies his class, and the Professor of Botany, a few of his most attentive pupils, to demonstrations in the country.

An extra hour is occasionally given by the Professor of Medical Jurisprudence during part of the course to the practical instruction of his pupils in the method of detecting various poisons.

In the classes of Clinical Medicine and Clinical Surgery, besides the two lectures delivered in each weekly, there is a daily visit of the patients in the Royal Infirmary, commonly lasting above an hour.

Examinations have been attempted in various other classes than those specified in the Table, but relinquished on account of great reluctance on the part of the students.

2105

University of Edinburgh.

Appendix. 4 Order XIX.

ORDER XIX.—Are any of the Examinations of the Students in the different Classes public Examinations? Do any such Examinations take place before all the Professors, or the Principal, or before the whole University?

Return by the Senatus Academicus.

There are no public examinations in the University.

ORDER XX.—Is there any public General Examination of the Students at the Commencement of each Session of the Classes of Greek, Latin, Philosophy, and of the Theological Classes in the College of Edinburgh? and if so, are such Examinations had in the presence of the Principal, and all the Professors?

Return by the Senatus Academicus.

There is no public general examination of the students at the commencement of each session.

ORDER XXI.—Is any Examination required by the Charters, Rules, Statutes, or Laws of the College of Edinburgh of the Candidates for Bursaries, or any of them at the said College? Who are appointed Examiners? and, if any such Examination is prescribed, is it in practice observed?

Return by the Senatus Academicus.

The Stewart Bursary, under the management of the University, is conferred by competition upon candidates who must be students in the second year of their study. By the will of the donor, a preference is given to the name of Stewart and Simpson.

The Macpherson Bursary, under the management of the University, is also granted by competition among candidates who must have a knowledge of the Gaelic language.

With regard to the other bursaries under the management of the town or private individuals, the Senatus beg leave to copy the answer sent by the Honourable Patrons:—"The Acts of Council "herewith transmitted contain some regulations on the subject referred to. There does not appear "to be anything on this point in the Charters. No such examination is in practice observed."—See Query 12.

ORDER XXII.—Have any Classes been transferred from one Faculty to another, and the Objects and Subject of the Course of Study of any of the Classes changed? and if so, by what Authority?

Return by the Senatus Academicus.

The Professor of Hebrew being commonly a clergyman, is personally admitted into the Faculty of Theology by the authority of the Senatus.

In 1762, the subject of rhetoric was separated from logic, and made the department of a distinct Regius Professor.

The Professor of Anatomy was not at first a physician, and he was not styled Professor of Medicine in his commission, nor authorized by the Patrons to examine candidates for the Degree of M. D. until 1757, when the two Drs. Monro received a new commission from the Patrons, appointing them Professors of Medicine as well as Anatomy, after which they became members of the Medical Faculty, although no distinct record of that change appears in the minutes of the Senatus.

The Professor of Botany was not a professor of medicine or member of the medical faculty till 1738, when Dr. Alston was appointed by the Patrons Professor of Medicine and of Botany.

The professorship of materia medica was separated from that of botany on the resignation of the former charge by Dr. Hope, and the appointment in 1768 of Dr. Francis Home, first by a Royal Commission as Professor of Materia Medica, and then by the Commission from the Patrons as Professor of Medicine and Materia Medica.

Both professors, *i. e.* of botany and materia medica, have since continued members of the medical faculty.

The Professor of Midwifery received a commission as professor of medicine, midwifery, and the diseases of women and children, from the Patrons, and thereafter became a member of the medical faculty in 1824.

The professors of the theory and practice of physic have always, at least since 1705, been authorized by the Senatus Academicus to examine for medical degrees. Until 1776, the commissions of these professors were similar, and they in general delivered lectures alternately on these subjects; but since that time the commissions have been different, and each professor has confined his lectures to one subject.

ORDER XXIII.—At what Period was each Professor limited to one particular Department? and when was the Practice of each Professor or Regent carrying forward one Class for the whole Period of the Course of Study, through all the Sciences, discontinued?

Return by the Senatus Academicus.

The practice of each professor or regent carrying forward one class for the whole period of the course of study was discontinued in the year 1708, and each professor was then limited to one particular department.

University of Edinburgh.

Appendix. Order XXIV.

ORDER XXIV.—Are there any Prizes in the different Classes of the College, or any Prizes open to Competition to all the Students at the University? and by whom are the Subjects prescribed? and by whom, and in what manner are such Prizes awarded and conferred?

Return by the Senatus Academicus.

No prizes in the College of Edinburgh are open to competition to all the students at the University. The sum of 10*l.* sterling has been annually given, for some years, by the Honourable Patrons for prizes in each of the following classes:—In the humanity, Greek, mathematics, natural philosophy, logic, rhetoric, moral philosophy, and Hebrew.

The subjects are proposed, and the prizes generally awarded by the professor, who commonly adds some prizes at his own expense.

In 1825, Dr. Fellowes, of Reygate, in Surrey, instituted a prize of 30*l.*, and another of 20*l.*, with a gold and silver medal, for the more advanced students of the natural philosophy class, or those of the second year's standing. To give full operation to these prizes, they are deferred till next year. The same gentleman has offered the sum of 75*l.*, with gold and silver medals, to the authors of the two best treatises on comets. The competition to be open to all who have finished their studies at Edinburgh within the last twelve years. The same offer will probably be repeated; but the terms are not yet adjusted.

Dr. Hope, in spring 1825, presented to the Senatus Academicus 700*l.*, the produce of a course of popular lectures on chemistry, as a prize-fund for the encouragement of the cultivation of chemistry; but no arrangement has yet been made by him respecting the management and distribution of the fund.

Many years ago, prizes were given to the botanical class, whether regularly or occasionally is not known. The present incumbent has revived the practice, and, from the benefits resulting, has gradually increased their number. The subjects are prescribed by the professor, and the prizes are awarded by him.

ORDER XXV.—Have the Students any Voice in the Appropriation of the Prizes? and if so, on what Authority is that Regulation founded?

Return by the Senatus Academicus.

In the Greek classes the students are allowed to give their votes in favour of a few who may have distinguished themselves by their superior talents and progress. This rests solely on the authority of the professor.

The Professor of Humanity is detained by sickness on the Continent; but it is believed that he follows the same rule.

In some of the prizes of natural philosophy students have a voice.

In two of the four prizes given in the Hebrew class, the students have a voice, by the indulgence of the professor.

In the other classes, where prizes are given, the students have no voice in their appropriation.

The Society of Writers to the Signet have lately founded a prize of a gold medal, of the value of ten guineas, to be given annually to the best Latin scholar of the senior humanity class. Five competitors for the prize are chosen by the class, by ballot, and the prize is awarded by the professor, to the individual of the five chosen, whom, after a comparative trial, he shall think best entitled to it.

ORDER XXVI.—Have any Funds been mortified or otherwise appropriated for Prizes, and in what manner are the same managed and distributed?

Return by the Senatus Academicus.

No other funds have been mortified, or otherwise appropriated, for prizes, than is mentioned in answer to Query 24.

On the Table of the Commission.

(1.)—Letter from Mr. Alexander Nisbet, student, in regard to the subject of prizes, and of degrees.
(2.)—Anonymous Letter, in regard to a Public Distribution of Prizes. Printed 2nd April, 1827.

ORDER XXVII.—Are any Students admitted to Attendance at any of the Classes in the College of Edinburgh, without paying Fees? and if so, is such Exemption matter of Right or of Indulgence by the Professors individually?

Return by the Senatus Academicus.

It has been already stated, in answer to Query 8, that the students of theology pay no fees.

All medical officers, of whatever rank, in the service of his Majesty, or of the Honourable East India Company, whether on full or half pay, are admitted gratuitously to military surgery; and this is a matter of indulgence by the professor.

Students of divinity are admitted gratis to the natural history class by the indulgence of the Professor of natural history.

A few students, at least three annually, are admitted gratis to attendance on the classes, which constitute the faculty of arts, making on the list of the faculty from twelve to fifteen each session. This is done after an examination by the faculty to ascertain their qualifications. The exemption is no matter

807

University of Edinburgh.

Appendix. Order XXVIII.

of right. A considerable number of other students are admitted by the special favour of individual professors to their respective classes.

No students are admitted to the lectures of any of the professors of the faculties of law and medicine, as a matter of right, without payment of fees; but several are admitted every year as a matter of indulgence at the discretion of each professor.

It is the usual practice to admit students gratis, who attend the same course of lectures for the third time.

ORDER XXVIII.—Is there any regulation requiring the Professors, as a body, or with their respective classes, to attend Divine Service on Sunday, in any Church or Chapel connected with the College, or in any particular place of worship, and is the same in observance; or, if not, how long has it been in non-observance? And is there any accommodation appropriated for the use of the Students generally, or of any particular Students in any particular place of worship; and is there any regulation applicable to Students not of the Established Church?

Return by the Senatus Academicus.

It was directed by the earliest laws of the college, that the students should walk on the Sabbath to church as a body, with the four regents at their head, and the hebdomadar following in the rear of the procession. The Academiæ Disciplina was digested by Principal Rollock cum avisamento ministrorum, many years before 1644; and, after many regulations therein prescribed had been in observance from that time, they were sanctioned by the town-council in 1701. The words of this enactment are as follows:—"Die Dominico, privatis lectionibus finitis, ad secundum pulsum eant in Templum, qua-"tuor Regentibus præeuntibus et sequente hebdomadario. Dimissâ concione a meridie redeant ordine "ad scholas suas, ubi a regente exigitur ratio utriusque concionis et matutinæ lectionis."

The practice described in the above extract appears not to have been very long continued with regularity, for at least two formal resolutions are inserted in the university minutes as anew, enjoining it from time to time.

It was resolved, December 11, 1733, "That the professors should attend Lady Yester's church by turns, in the following order:—1st. Messrs. Gaudie, Scott, Dawson; 2nd. Stewart, Bain; 3rd. Crawford, Drummond, Erskine; 4th. M'Kie, M'Leod, and Monro; 5th. Sinclair, Plummer, Watts; 6th. Rutherford, Dundas, and Stevenson."

And November, 16, 1738, "That on Sabbath morning next, all the masters of the university shall meet in the Guard Hall in order to walk in a body to the college loft in Lady Yester's kirk; and the janitors are enjoined to take care that none but students possess seats in the college loft."

There is no record or even tradition known to the S. A. when these resolutions ceased entirely to be observed. In practice they are not observed at present.

Immediately after the foundation of the university, there was accommodation provided for the students on the Sabbaths in St. Giles's church. At a later period, they were transferred to the Trinity College church, and after the building of Lady Yester's church in 1655, in the vicinity of the college, there was a gallery appropriated in it, to their use. This gallery will contain about 200 persons, and there is a full and regular attendance of students.

There is no particular regulation on the point applicable to such students as are not of the Established Church.

(See also Petition of Students, pp. 204—206 of this Appendix.)

ORDER XXIX.—A Return of the number of Students matriculated at the College of Edinburgh, for the last fifty years, specifying the numbers for each year, and of the numbers entered for the different Faculties respectively.

Return by the Senatus Academicus.

Previous to 1791, each professor matriculated his own class, and therefore it happened that the same student, although he paid the matriculation-fee but once, was returned oftener, and the aggregate number of students is erroneously stated by the sum of the whole, as in the annexed table. After this, the total number is nearly correct, with the exception of the Students of Divinity, who ought to be added, but of which a list will be found in the Return to 30.

In 1791, and till 1810, the students attending the literary and philosophical classes enrolled themselves in one continued list, as did also the students attending the Scots and civil law classes.

The medical students, previous to 1763, matriculated with each professor they attended; and from this period till 1810, all the medical Students were annually enrolled in one alphabetical list.

From 1811 till the present time, all the students annually enrol themselves in one continued list, and describe themselves as literary, medical, or law students.

Years.	1775.	1776.	1777.	1778.	1779.	1780.	1781.	1782.	1783.	1784.	1785.	1786.	1787.	1788.	1789.	1790.

University of Edinburgh.

Appendix. Order XXIX.*

Previous to this date, the total number of the Literary and Philosophical Students that have matriculated cannot be accurately known, from the circumstance of the greater number of them attending more than one Class in the same Session.

The Students are now matriculated according to Faculties, and the number attending each is as follows:—

Year.	Literature and Philosophy.	Medicine.	Scots and Civil Law.	Total.	Year.	Literature and Philosophy.	Medicine.	Scots and Civil Law.	Total.
1791	262	427	68	757	1811	636	716	123	1475

N.B.—The matriculation of Students was not so strictly enforced before 1809, as it has been since that time, so that the numbers before stated, before 1809, are probably somewhat less than were actually in attendance.

The following Table was drawn up by the late Dr. Gregory, showing the proportion of Students from different parts of the world, attending his Lectures on the Practice of Physic in the five years preceding 1790.

Average number for these five years	215
Average number from Scotland, nearly	91
Ditto, from England	55
Ditto, from Ireland	35
Ditto, from the West Indies	12
Ditto, from North America	12
	205

The remaining 10 of the average 215 were chiefly foreigners, from Portugal and Brazil, France, Italy, Germany, Poland, Switzerland, Geneva, and Flanders, and a few of English extraction from the East Indies. But the foreigners, whose native language was not English, have not been one-twentieth of the whole number of Students.

Order XXX.—A Return of the proportion of Medical Students at the College of Edinburgh, during the same period; distinguishing the number from the different parts of the United Kingdom, and those from Foreign Countries.

Return by the Senatus Academicus.

A RETURN of the number of Medical Students at the University of Edinburgh, for the last fifty years.

Clinical Lectures.—Since 1818, a Summer Course of Clinical Lectures has not been received as qualifying for the Degree in Medicine; the Statuta Solennia of that, and subsequent years having required a six months' course, although this regulation was not allowed to operate retrospectively. This is the reason of the diminution of the number of Pupils attending the Clinical Lectures in summer since that time.

Clinical Surgery.—The Professor states, that from some circumstances connected with his private lists, he must begin by giving the number of Students attending the Class of Clinical Surgery in the Summer Course of the year 1815.

Midwifery.—Prior to Session 1824-25, the Professor gave three Courses annually; and the number stated in the return is the sum of the number attending each Course; and as many of the Pupils attended the three Courses, they were reckoned two or three times over.

Military Surgery.—The return embraces the whole period during which the Chair has been held by the present Professor, which is also the whole period that it has been taught as a separate Course, and within the walls of the University.

RETURN of the number of Students attending each Class, from 1812 to 1830.

DIVINITY.—The Students at the Divinity Hall not being obliged to matriculate in the General Library Book, the record of their numbers there is very incomplete, and the list kept by the former Professor of Divinity cannot be recovered.

CHURCH HISTORY.—The present Professor has not preserved the lists of his Students; but during the earlier period of his incumbency, the number attending fluctuated between 30 and 40; for the last twelve years a return has been made.

NATURAL PHILOSOPHY.—Professor Leslie reports that the number of Students who attended the Natural Philosophy have been increasing slowly, from 1818, to the present time, from about 150 to 160.

MORAL PHILOSOPHY.—The present Professor of Moral Philosophy has not kept a regular and accurate account of Students at his Class each Session. It varies from 140 to 160.

* N.B.—The Professor of Anatomy kept no accurate list of the Students attending his Class for Session 1828–29, but has made a return to the Library of 131 Students.

No returns of the Students who attended the Classes of Practical Anatomy and Practical Chemistry were called for until 1828, when the Regulations for Degrees in Medicine, requiring attendance on these Classes, came into operation.

The Students attending the Class of Natural History average 200 each year. This number includes Students of Divinity, admitted by the Professor *gratis*.

University of Edinburgh.

Note, by Dr. Brunton, Edinburgh.—Those Students who, according to the present law, are deemed *regular*, after attending for three Sessions *regularly*, are bound to enrol their names for a fourth. In the above list, they appear as *irregular* Students for this fourth Session, as they are not bound to give attendance in the course of it. Upon an average, I should suppose the number of such Students, each Session, to be at least 30; which will materially affect the result of any calculation founded on this list.

Note.—The average of the total number of Students attending at the Divinity Halls of all the Colleges and Universities of Scotland, annually from 1821–22 to 1825–26, is 819—the average of the *regular*, 483—and of the *irregular*, 336.

ORDER XXXII.—In what Faculties are degrees conferred? And by whom are the same conferred?

Return by the Senatus Academicus.

Degrees are conferred in this university in the faculties of Divinity, Law, Medicine, and Arts; but all degrees are conferred by authority, and in the name of the Senatus Academicus.

ORDER XXXIII.—What are the qualifications required of Candidates for degrees in regard to attendance, and course of study or curriculum, at the College of Edinburgh? And at what period and by what authority were the same fixed?

Return by the Senatus Academicus.

(1.) Degrees in theology and law being merely honorary, no particular *curriculum* of previous academic attendance is required, but they are never conferred, but on individuals distinguished by literary and scientific attainments, or by very eminent personal merits.

The qualifications required of candidates for degrees in medicine in this university have always been regulated by the Senatus Academicus exclusively. The first regulation, under the title of *Statuta Solennia*, prescribing, *inter alia*, a course of study, was in 1767; prior to which time, the fitness of candidates for the degree was judged of by examination only. In 1777, another regulation, explanatory of the former, was promulgated by the Senatus; and in 1783, the *Statuta*, were translated into English, and published in the newspapers with explanations. In 1787, 1790, 1813, 1818, and 1823, certain alterations were made on the *Statuta*, but without any additional course of study being imposed; and in 1825 a new edition of them was published, containing greater alterations, and imposing, except in certain cases, an additional year's study, and in all cases additional attendance on lectures, and on hospitals. These are the regulations now in force, as to all who have commenced, or may commence their studies, subsequent to their promulgation. But those gentlemen, who may have commenced their studies previously, are held to be entitled to become candidates for graduation on complying with the regulations as to the course of study contained in the former *Statuta*.

Copies are annexed of the original *Statuta* in 1767—of the explanatory resolution of 1777—of the translation and explanation of them in 1783—and of the successive editions of the Statuta in 1811--13--14--18--23, and 1825.—(See Documents at the end of this Paper.)

It is to be observed that when alterations have been made by the Senatus on the qualifications required by candidates for degrees, the usual practice of the university has been to enforce these alterations on such gentlemen only as should commence their studies subsequently to their enactment, and to allow those who had commenced their studies before their enactment to become candidates for the

degrees, on complying with the regulations as to qualification, which were in force at the time of their commencing their studies. This rule has been followed, at least in all the following cases:—

1st. In that of the attendance on Mathematics being required of Students of Divinity in 1810.

2nd. In that of the attendance on Rhetoric being required of Candidates for the Degree in Arts in 1813.

3rd. In that of persons, under 21 years of age, and persons under apprenticeship to surgeons, being prohibited from taking the Medical Degree in May, 1813.

N. B.—As the reason of this last statement has been assailed by the College Committee of the Town-council in their Report of 26th October, 1825, it is necessary to add here an extract from the minutes of the Senatus Academicus of the 2nd December, 1813.

"The Medical Faculty stated that doubts had arisen as to the time when the recent enactment, "requiring a certain age in candidates for the Medical Degree should begin to take effect. The Senatus "were of opinion that the statute should not be enforced till September, 1815."

There were at that time two graduation terms in the year, in June and September; so that, by this Resolution of the Senatus, all who had commenced their medical studies prior to the enactment of this new regulation in May, 1813 (*i. e.* who had become medical students in 1812), had an opportunity of becoming candidates for graduation in June, 1815, before these new regulations were allowed to take effect.

4th. The same principle was followed in the course of the alterations in the course of study for medical degrees, qualified by the Senatus in the *Statuta Solennia* of 1825.

Candidates for the degree of Master of Arts must have attended a university during four regular sessions, and in that time must have attended the classes of Humanity, Greek, Mathematics, Logic, Rhetoric, Moral and Natural Philosophy. During the period when the business of the university was conducted by four regents, each of them laureated his students at the end of four sessions.

The regulations appear all along to have been enacted by the Senatus Academicus, having been generally printed and circulated, and on some occasions published in the newspapers by their authority. (See Order III.)

(2.) Regulations for Conferring Degrees in Arts.

May 26, 1735.

26 May, 1735. This being the day appointed for taking into consideration the overture and regulations as to conferring the degree of Master of Arts, the said overture, which had been drawn up by a full committee of the university a considerable time ago, and had been read several times formerly in university meetings, were this day read again; and after mature consideration, the meeting judged them reasonable and fit to be made standing rules in conferring the degree of Master of Arts, and appointed them to be observed the next session of the college and in time coming; and recommended to the principal and professors Gowdie, Stewart, Bayne, Maclaurin, or any of them, to lay the said overtures before the Honourable Patrons of the university; of which overture and rules the tenor follows:—*Primo*, 'Tis agreed by the committee that whoever shall enter to the Magistrand Class who has not been in any of the inferior classes before, if he intends to take the degree, he shall be certified by the professor of that class that he cannot have it unless he bring a certificate from a credible hand of his good behaviour, and under whom he was taught the other parts of learning. 2do. That no stranger from without the bounds of Scotland and entering to the Magistrand Class shall have y^e^ degree in Arts before the first free day after the March vacance, and shall be oblidged to have studied here at least four months before they get the degree. 3tio. That the ordinary time for graduating the Scotsmen, shall not be before the last week of Aprile, and that none of these shall be admitted to that degree, unless they have studied three years in Philosophy, either here or in some other university, which is to be by him duly certified, during which time they shall be obliged to have attended on the Mathematicks and Moral Philosophy, as well as the Semis and Magistrand Class for one year at least; and that strangers who have attended the Magistrand Class three months may have the degree at that time. 4to. That the candidates for the degree shall be carefully examined upon their Greek, and all the parts of Philosophy in y^e^ Common-Hall, by at least two masters of y^e^ Faculty in Arts to be named by the university meeting, and that in presence of at least two or three more of the professors, and that none of the candidats shall obtain the degree, except he approve himself to the majority of y^e^ meeting. 5to. That y^e^ university meeting shall enjoin the Professor of Divinity, that after the 10th of October next he receive no new students of Divinity, nor consider them as schollars under his care, who cannot produce a certificate of their having got the degree in Arts: and withall, declair such as are already inlisted students of Divinity shall (the Professor of Naturall Philosophy having proposed y^e^ same) have the degree gratis, they paying y^e^ ordinary fees to y^e^ library and servants, and that they should recommend to y^e^ reverend the Professor of Divinity, to advice such students to take the degree for a good example in y^e^ mater.

30th November, 1738.

30 November, 1738. The Report of the Faculty of Arts, with respect to what might be altered in the act of the university meeting, agreed to the 26th May, 1735, anent conferring the degree of Master of Arts, being read and considered by this university meeting, was unanimously approven, with the alterations mentioned in the said Report, and the tenor of the foresaid act, as now amended, follows:—

Primo, It's agreed that whosoever shall enter to the Magistrand Class, who has not been in any of the inferior classes before, that if he intends to take the degree of Master of Arts, he shall be certified by the professor of that class, that he cannot have it unless he bring a certificate from a credible hand of his good behaviour.

2do. None shall be admitted to the degree of Master of Arts, unless they have studied three years in Philosophy, either here or in some other university—during which time, they shall be obliged to have attended on the Mathematics and Moral Philosophy, also well as the Semis and Magistrand Class, for one year at least, which is to be by them duly certified; and unless they undergoe a publick examination after this manner, viz. the candidats are to be carefully examined upon their Greek, and all the parts of Philosophy, in the Common-Hall, by at least two masters of the Faculty of Arts, to be named by the university meeting, and that in presence of at least two or three more of the professors, and that none of the candidates shall obtain the degree except he approve himself to the majority of that meeting.

3tio. As to strangers comeing from w^t^out the bounds of Scotland, who may happen not to have brought with them certificates of their three years standing, they may be admitted to the said degree,

University of Edinburgh.

Appendix. Order XXXIII.

30 November, 1738.

provideing they shall subject themselves to a more strict and solemn examination, to be performed in the Common-Hall by four examinators, and in presence of ane university meeting.

4to. That there shall be ane common fixed term for conferring the degree of Masters of Arts once in the year, viz. some day in the last week of Aprile.

5to. All these who incline to take the degree shall, if they please, before they enter on their public examinations, previously confer with two masters of the Faculty of Arts who are to be annually chosen by the university meeting, in the beginning of the session, for that purpose.

6to. That the university meeting shall enjoin the Professor of Divinity, that after the 10th of October next, he shall receive no new students of Divinity, nor consider them as schollars under his care who cannot produce a certificate for having got the degree in Arts: and withall, declair such as are already listed students of Divinity shall (the Professor of Naturall Philosophy having proposed the same) have the degree gratis—they paying the ordinary fees to the library and servants, and that they should recommend to the reverend Professor of Divinity to advise such students to take the degree for a good example in this matter.

It was recommended to the Principal, after reading of the college laws, to read publickly, in the Common-Hall, this act anent conferring the degree of Master of Arts. As also, it was recommended to the Principal and Mr. Ker, to make ane abstract of the said act, in order to be insert in the public papers.

February 4, 1778.—Present at an university meeting, Principal Robertson, Professor James Robertson, John Robison, Dalziel, Hill, Dugald Stewart, and Bruce. There was transmitted from the Faculty of Arts, the following proposals concerning the graduation of Master of Arts.

The publick annual Graduation of Masters of Arts, will be holden in the publick hall or library, on the last Tuesday of March, previous to which it is required:—

I. That the candidates for this degree shall make application to the professors before the last Tuesday of February.

II. That there shall be first a private and then a public examination of the candidates.

III. That the private trial shall be held in the Guard-hall before the Faculty of Arts, each professor examining the candidates on his own branch of literature or science.

IV. That the publick trial on the day of graduation shall consist of a short Latin Thesis or dissertation on some point of literature or science, to be recited by the candidate before the university.

V. That the Thesis shall be accompanied with short propositions in the form of annexa, upon all or any of the branches of learning taught by the professors of the Faculty of Arts; and that these annexa shall be subjects of public examination.

VI. That a fortnight previous to the publick exhibition, each candidate shall deliver to the Dean of the Faculty of Arts, a copy of his Thesis, with annexa, to be inspected by the professors, who are to judge of the propriety of the publick recital.

These having been read and considered by the Senatus Academicus, they unanimously approve of the same, and appoint Professors Dalziel and Hill to translate the same into Latin, that they may be hung up in the publick library, in order that all the students may have knowledge of them.

December 21, 1814.—Professor Christison, from the Faculty of Arts, read a Report upon the classes to be attended in order to obtain a degree in Arts, and in conformity to the said Report, the Senatus determined them to be Latin, Greek, Mathematics, Logic, Rhetoric, Moral and Natural Philosophy.

The general Report as to the mode of conferring degrees in Arts was read again, approved of and ordered to be engrossed in the minutes, and a fair copy to be hung up in the library.

The Resolutions were:—

1. That except on extraordinary occasions afterwards specified, Masters of Arts to be made twice a-year only.
2. That the candidates for the degree give in their names to the Dean two weeks before the 3rd of December, or the last Saturday of March.
3. That they be examined privately by each member of the faculty, a week at least before the faculty recommend them, if they be found qualified, to the Senatus Academicus.
4. That the members of the faculty meet in the upper library at noon, on the third Saturday of March, annually, to determine which of the candidates shall be recommended to the Senatus Academicus, as qualified, in their opinion, to obtain the degree of Master of Arts.
5. That no one be admitted a candidate, till he has attended a university four years.
6. That a regular course of literature, comprehending Latin, Greek, mathematics, logic, rhetoric, moral and natural philosophy, be required.
7. That candidates from other universities produce certificates of having attended the requisite classes.
8. That extraordinary cases be first referred to the Senatus Academicus, before the candidate be examined by any of the faculty of arts.

On the 8th March, 1825, the following regulations, approved by the faculty, were submitted to the consideration of the Senatus, and were by them referred back to the faculty for further deliberation:—

"The faculty took into consideration the proposition concerning the time and mode of granting the degree in Arts, which was brought under their attention on the last Saturday of February, 1824; and after deliberating on the same, agreed to submit the following additional clause to the regulations already in force, for the sanction of the Senatus Academicus:—'That degrees in Arts shall be conferred only on the second Saturday of April, excepting in particular circumstances which may require indulgence; that the candidates shall give in their names and their certificates of attendance on the requisite classes to the Dean of Faculty, on or before the 1st day of March; and that before they are recommended to the Senatus, they shall be appointed to translate a few paragraphs from some English author into Latin

and Greek, to demonstrate a proposition or solve a problem in mathematics, and to answer such question as may be put to them by members of the faculty.' "

University of Edinburgh.

Appendix. Order XXXIII.

Regulations as to Bursaries and Attendance.

I. *Stewart Bursary.*—Candidates for the Stewart Bursary must lodge their petitions, stating their claims, and their places of residence, with the secretary, at the library, on or before the first Saturday of December.

Candidates must be in the second year of their academical studies.

The bursary is granted after a comparative trial of proficiency in the Latin and Greek languages.

By the deed of mortification, preference is given, *first*, to candidates of the name of Stewart; and, *secondly*, to those of the name of Simpson.

II. *Certificates of Regular Attendance.*—Those who expect certificates of regular attendance on the literary and philosophical classes, must take out their tickets before the 1st day of December, unless they be prevented by sickness, or some other unavoidable cause of delay.

No certificates of regular attendance will be given before the end of the first week in April, unless to those who satisfy their professors that they are under the necsssity of leaving college sooner.

No certificates will be granted, unless at the close of the session for which they are required.

III. *Gratis Tickets.*—Students who apply to the Faculty of Arts for gratis tickets, must bring with them, from their parish minister, certificates of their character and pecuniary circumstances, and must lodge them with the Dean on or before the third Saturday of November. They shall be examined by the Faculty of Arts as to their proficiency in Greek and Latin, on the Monday thereafter, at three o'clock, and such only as are found duly qualified shall receive tickets.

They shall be examined also on the first Monday of April in each session; and if they are not found to have made due proficiency in their studies, they shall be cut off from getting gratis tickets again.

IV. *Students of Divinity.*—Those who mean to enrol as regular students of divinity must attend the literary classes, mathematics, logic, moral philosophy, and natural philosophy, during four sessions; and in no one session can any two of the following classes, viz., Greek, logic, moral philosophy, and natural philosophy, be taken together *for the first time.*

Edinburgh College, August 4, 1763.

4 August, 1763.

The Principal and members of the Divinity Faculty, in consequence of the remit to them of January 21st, 1763, having met, and considered what rules might be proper to be exacted and observed by this University in proceeding to confer the Degree of Doctor of Divinity, did agree to propose the following plan, submitting the same to the judgment of the University:—

I. That proposals to confer the above said degree shall be made to the University only by the Faculty of Divinity, in case they shall be willing to make the same.

II. That in order to know whether they are willing, any member or members of the University who may desire to have any person created a Doctor in Divinity, shall first confer privately with the said Faculty, or shall desire and obtain that the University's authority may be interposed for the meeting of said Faculty, in order to hear the proposal, and to judge whether they will adopt it and lay it as theirs, or as approved by them, before the Faculty.

III. That in case the said Faculty shall not agree, or a majority of them, to make such proposal, or support it, that it shall still be the privilege of any member or members of the University to make it openly in the Faculty of the University.

IV. But if the consent of the Faculty of Divinity, or a majority of them, shall not be obtained to any such proposal, that the University shall not confer the degree foresaid, except in the method, and under the conditions following:—1st. That the candidate be required to undergo a private and public examination as when other kinds of degrees are conferred. 2ndly. That he publish and sustain a thesis on some head of divinity to be appointed him by the Faculty of Divinity. 3rdly. That he lodge at the time of proposing him, or at least before any resolution be taken in his favours, a certificate or certificates of his character, and also of his having been graduated at some University a Master of Arts. 4thly. That he be at least thirty years of age at the time of his being proposed as a candidate for the Degree of Doctor in Divinity.

V. That in case the candidate or person proposed shall have acquired reputation, or a distinguished character for learning, particularly in the science of theology, by his publications, the above injunctions to subject him to an examination, or to the publishing or sustaining a thesis in Latin, may be dispensed with; and by parity of reason, one who having undergone in another University the above course of trial, may in this, without undergoing them anew, receive a degree, *ad eundem.*

VI. That in no case the degree be conferred (only when it is given *ad eundem*), except a compliment, not under ten pounds sterling, be made by the candidate to the library of this University; and the accustomed dues, as in former times, paid to the library-keeper and servants of the University, or such dues as shall now be judged competent to be established in their favour.

Report of Committee as to Regulations to be observed in conferring Degrees, 15*th February*, 1823.

15 February, 1823.

1mo. Respecting the Degrees in Divinity and Laws:—

a. When either of the Faculties of Divinity and Law wish a degree to be conferred, they shall communicate their wish to the Principal, who shall call a meeting of the Senatus Academicus, for the purpose of receiving the proposal. This proposal shall be considered at a subsequent meeting, to be held after an interval of not less than eight days.

b. When any individual professor shall wish one of these degrees conferred, he shall communicate his wish to the Principal, who shall transmit the proposal, with the necessary documents of character, &c., to the Faculty to whose department the degree belongs, for their consideration. The Faculty shall, with as little delay as possible, meet and report their opinion to the Principal, who shall lay the pro-

University of Edinburgh.

Appendix. Order XXXIII.

posal, and the Report of the Faculty, before the Senatus Academicus, who will decide upon it at a subsequent meeting, as already directed.

If the Faculty make no Report within the period of one month, or shall report unfavourably, it shall still be competent for the individual professor who wishes the degree conferred, to bring the proposal before the Senatus Academicus.

c. The billet, calling the first of the above-mentioned meetings, shall state that it is for the purpose of receiving proposals for conferring the degree of D.D. or LL.D., as the case may be, and the billet calling the second meeting, that it is for the purpose of considering such proposal.

d. The name of the person on whom it is proposed to confer a degree shall not appear in the records of the university, in the event of its not being conferred.

2do. Respecting Degrees to be conferred in Medicine and Arts:—

The existing statutes enjoining particular courses of study and examinations, as well as the mode of application to the Deans of the different Faculties, &c., shall continue in force till there appear cause for altering them.

(Signed) G. H. Baird.

No. (1.)—Extract from the Minutes of the Senatus Academicus.

De Diebus Solennibus et Exercitiis Requisitis ad Doctoratûs in Medicinâ Gradum, &c.

Feb. 1767.—Statut. 1mum, Nemo, qui Doctoratûs in Medicinâ gradum cupiverit, ad eundem promoveri poterit, nisi duobus diebus Solennibus, duodecimo nempe mensis Junii et duodecimo Septembris, vel diebus mox sequentibus, pro numero candidatorum.

II. Nemo in candidatorum numerum ascribi potest, priusquam studiorum cursum in omnibus, quas Scientia Medica complectitur, disciplinis, in hac vel in aliâ Academiâ penitus absolverit.

III. Tribus saltem mensibus ante dies prædictos, quicunque honores Medicinæ ambiverit, consilium Facultatis Medicæ Decano aperiat, ut Facultas, questione privatim habitâ de profectu ejus in literis, præcipuè Medicinæ studio, certior fiat, antequam ad ulteriora peritiæ tentamina eum admittat.

IV. Candidatus dissertationem de re Medicâ, a se ipso compositam, alicui Medicinæ Professorum, in, vel ante diem primum mensis Aprilis vel Julii, tradere debet, ut is eam perlegat, si opus fuerit emendet, et emendatæ Syngrapham suam apponat.

V. Candidatus, a Facultate, Medicâ admissus, in primum diem Maii vel Augusti Decano tradat dissertationem suam, de re Medicâ a seipso compositam, ab aliquo Professorum Medicinæ perlectam, et Syngraphâ ejus notatam, Facultatis Medicæ judicio subjiciendam, priusquam ad cætera exercitia pro gradu obeunda pergat.

VI. Sexto die Mensis Maii vel Augusti, Candidatus, coram facultate Medicâ a duobus Professoribus interrogatus, progressum suum in Anatomiâ, Chemiâ, Arte Medicamentorum, Botanice et Materiâ Medicâ, vel quacunque Medicinæ parte quæ iis placuerit, ostendat.

VII. Candidato hactenus probato tradendi sunt duo Hippocratis Aphorismi, ab illo explicandi et illustrandi, isque eos sic illustratos in diem Maii vel Augusti decimum sextum professoribus reddat, eosque, eorundem mensium die decimo octavo, coram Facultate Medicâ defendat.

VIII. Si post hoc secundum tentamen candidatus promoveri mereatur, illi tradendæ sunt duæ morborum historiæ cum questionibus subjunctis, quas scribendo illustrat, et questionibus commoda responsa reddat. Deinc quæ scripserit Candidatus, in primum diem Junii vel Septembris Professoribus proponentibus tradat, et die tertio eorundem mensium omnia quæ scripserit, præsente facultate medicâ, defendat.

IX. Candidato, si in primo examine sexto die Maii vel Augusti probatus fuerit, dissertationem suam prælo subjicere licebit, et ejusdem accuratè excussæ, paginâ titulum et Academiæ auctoritatem præferente, excepta sex exemplaria Facultatis Medicæ Decano, in tertium diem Junii vel Septembris, reddat; et ne dissertationes Medicæ inemendatæ in lucem prodeant, statutum est ut Academiæ Typographo eas excudendi solum permittatur privilegium, quamdiu is, ad arbitrium Facultatis Medicæ, omnia ad operis ornatum et perfectionem spectantia minimis impensis fieri curaverit.

X. Si Candidatus, dissertatione jam excussâ, se, tertiâ etiam vice, honoribus Medicinæ dignum ostenderit, Facultatis Medicæ Decanus tum demum omnia quæ gesta sunt, Senatui Academico renuntiabit, cujus approbatione et auctoritate Candidatus dissertationem edere, eandemque in comitiis Academicis publicè defendere jubebitur, diebus antea Statutis, duodecimo nempe die Junii vel duodecimo Septembris: jam si Senatui placuerit, laboris tandem et Studiorum prœmium, summos in Medicinas honores, gradumque nempe doctoralem, more solenni, auferet.

XI. Facultas Medica, quo major sit solennitas in omnibus his examinationibus, semper inter Academiæ pomœria diebus prædictis conveniet.

XII. Exercitia omnia anteadicta Linguâ Latinâ peragenda sunt.

The Senatus Academicus having maturely considered the above regulations and exercises prescribed to candidates for a degree in medicine, unanimously approved of them, and appoint and ordain that they shall be punctually and regularly observed for the time to come.

No. (2.)—Alteration of the Statuta Solennia in 1777.

Extract from the Minutes.

1777. 1*st November*, 1777.—The Faculty of Medicine presented to the Senatus Academicus the following alterations relating to a degree in medicine. Some doubt having arisen among candidates for degrees concerning the meaning of "omnibus quas Scientia Medica complectitur," Law 2nd; that is now explained, and the law runs thus—"et omnibus quas Scientia Medica complectitur disciplinis, scilicet Anatomiæ et Chirurgiæ, Chemiæ, Botanices, Materiæ Medicæ et Pharmaceutices, Medicinæque Theoreticæ et Practicæ, et Prelectionibus Clinicis, apud ægros in Nosocomio Regio decumbentes habitis, operam dederit."

817

No. (3.)—*Extract from the Statutes of the University of Edinburgh, respecting the conferring of Degrees in Medicine, produced by Principal Robertson, approved of by the Senatus Academicus, and ordered to be published.*

University of Edinburgh.

Appendix. Order XXXIII.

8 December, 1783.

8th December, 1783.

I. No person shall be received as a candidate for a degree in medicine, until he has applied, during three complete years, to the study of medicine in this or some other university. It is expected of Candidates, to attend the university of Edinburgh at least one of those years, that the professors may be acquainted with their character, conduct, and diligence in prosecuting their studies.

II. Every candidate for a degree in medicine must signify his intention to the Dean of the Faculty of Medicine, at least three months before one of the two stated days of public graduation in each year, and shall then undergo, in the house of one of the professors, the first and most private examination in all the branches of medicine, viz. Anatomy and Surgery, Chemistry, Botany, Materia Medica and Pharmacy, Theory of Medicine and Practice of Medicine, each of the professors proposing questions to him in order.

All the professors consider themselves bound in honour not to divulge the unfavourable result of an examination; a candidate may be remitted to his studies in this stage of his trials, without injury to his reputation or interest.

III. Each candidate, six weeks before one of the stated days of public graduation, shall deliver to one of the professors a dissertation on a subject in medicine, that it may be revised by the professor, and then subjected to the consideration of the Faculty of Medicine.

IV. The candidate shall then undergo a second examination upon all the branches of medicine, in the library of the University, particularly with respect to points not touched upon in his former examination.

V. An aphorism of Hippocrates is selected, of which the candidate is to deliver an explanation and illustration in writing; at the same time a question in medicine is proposed to him, to which he shall return an answer in writing, illustrated with a commentary; and with respect to both these he is examined in the library by the professors.

VI. The cases of two patients, with questions relative to them, are given to the candidate, which he is required to illustrate in writing, with proper solutions of the questions.

VII. Upon a report from the Medical Faculty of all these proceedings, with their approbation of the candidate, his Dissertation is published by authority of the Senatus Academicus; he is required to defend it in the common hall of the University against the professors appointed to impugn it; and then, by act of the Senatus Academicus, he is promoted to the highest academical honours with the usual solemnities.

VIII. All these different exercises are performed, and each part of the trials carried on in the Latin tongue.

The public will judge with respect to the degree of accuracy and strictness in conducting these various parts of trial, from being informed that there is seldom any year in which more than one candidate is not remitted to his studies. At the same time the professors mention with much satisfaction, that it is not uncommon for candidates who have been found unqualified, to apply afterwards to their studies with such diligence and success, that they have acquitted themselves with great applause in a subsequent examination, to which they cannot be admitted till an year elapse from the time of their former trial.

Though a person may offer himself as a candidate for a degree in medicine, after applying to the study of that science during three years in this or in some other University, it is to be observed that a considerable proportion of the graduates in the University of Edinburgh attend the Colleges of Medicine several years beyond that period.

Besides the lectures on the various branches of medicine in the University, clinical lectures are delivered each year by two of the professors of medicine, on the cases of certain select patients in the Royal Infirmary, entrusted to their care by the governors of the hospital, whom the professors visit, and for whom they prescribe in the presence of the students. No person is admitted as a candidate for a degree in medicine unless he has attended the clinical lectures.

(No. 4.)—*Q. F. F.Q. S.*—Statuta Solennia de Doctoratûs in Medicinâ Gradu in Academiâ Edinburgenâ capessendâ, a Facultate Medicâ proposita, et in posterum, jubente Senatu Academico, observanda.—1811.

1811.

1. Nemo ad Doctoratûs in Medicinâ Gradum promoveatur, nisi Duobus Diebus Solennibus XXIV^{TO} nempe mensis Junii, et XII^{MO} Septembris, vel diebus proximè sequentibus.

2. Nemo Candidatorum numero adscribatur, priusquam triennium, in hac aut aliâ Academiâ, Medicinæ studio impenderit, et omnibus quas Scientia Medica complectitur Disciplinis, scilicet, Anatomiæ et Chirurgiæ, Chemiæ, Botanicæ, Materiæ Medicæ et Pharmaceuticæ, Medicinæque Theoreticæ et Practicæ, et Prælectionibus Clinicis à Medicinæ Professoribus habitis, de ægris in Nosocomio decumbentibus, operam dederit.

3. Quicunque honores Medicinæ ambierit, ante diem XXIV^{UM} Martii vel XII^{UM} Junii, alicui Medicinæ Professorum tradat Dissertationem Medicam Inauguralem a seipso compositam, ut Professor eam perlegat, si opus fuerit emendet, et perlectæ scriptam suam testificationem, notato simul die quo eandem acceperat, apponat.

4. Tum, ad vel ante diem XX^{UM} mensis Aprilis vel Julii, Medicinæ Honores ambiens consilium suum cum Facultatis Medicæ Decano communicet, et simul Dissertationem suam inauguralem (adjectâ Professoris qui perlegerat testificatione) illi tradat, Facultatis Medicæ judicio subjiciendam.

5. Postea Quæstio a Facultate Medicâ, vel vivâ voce vel scripto habenda est, ut nemo, nisi literarum et Medicinæ scientia probè imbutus, Candidatorum numero adscribatur.

6. Dei XVIII^{VO} mensis Maii vel VI^{TO} Augusti, Candidatus, coram Facultate Medicâ à duobus Professoribus interrogatus, progressus suos in variis Disciplinis Medicis, supra enumeratis, ulteriùs ostendat.

7. Candidato hactenus probato proponatur, ab aliquo Professorum, unus ex Aphorismis Hippocratis; et simul, ab alio Professore, Quæstio Medica; quorum priorem a se ipso explicatum et Commentario illustratum; posteriorem, unà cum Responsione idoneis argumentis confirmatâ, die XXVIII^{VO} mensis Maii vel XVI^{TO} Augusti, Professoribus proponentibus Candidatus reddat; suumque demum Commen-

University of Edinburgh.

Appendix. Order XXXIII.

tarium et Responsionem, XXX^MO die mensis Maii vel XVIII^VO Augusti, coram Facultate Medicâ defendat.

8. Si, his ritè peractis, Candidatus promoveri merebitur, illi tradantur, a duobus Professoribus, duæ Morborum Historiæ, cum Quæstionibus subjunctis, ut Scripturâ illas illustret, his commoda Responsa reddat; tum Historias ita illustratas, unà cum Responsis suis, die XII^MO mensis Junii vel I^MO Septembris, Professoribus proponentibus tradat, atque easdem, die XV^TO Junii vel III^TIO Septembris, coram Facultate Medicâ defendat.

9. Candidato, si, post primum periculum, die XVIII^VO mensis Maii vel VI^TO Augusti factum, probatus fuerit, Dissertationem suam inauguralem prelo subjicere liceat, cujus accuratè excusæ octo exemplaria, Facultatis Medicæ Decano, XV^TO mensis Junii vel III^TIO Septembris, tradat.

10. Si Candidatus, Dissertatione jam excusâ, tertiò a Medicinæ Facultate fuerit probatus, ejusdem Facultatis Decanus omnia quæ gesta fuerint Senatui Academico renunciabit; cujus approbatione et auctoritate Candidatus Dissertationem suam edere, eandemque in Comitiis Academicis, diebus antea statutis, XXIV^TO nempe Junii vel XII^MO Septembris, defendere jubeatur: tum, si Senatui placuerit, laboris tandem et studiorum præmium, summos in Medicinâ Honores, Gradum nempe Doctoralem, more solenni, consequatur.

11. Facultas Medica, quo major sit horum omnium solennitas, semper intra Academiæ pomœria, horâ nonâ ante meridiem, diebus supradictis, conveniet. Et si quis Candidatus, sine gravi causâ, horâ abfuerit statutâ, occasione neglectâ, ei, hac vice, vel ad ulteriora pericula progredi, vel Gradum Doctoralem assequi, non licebit.

12. Exercitationes omnes anteadictæ Linguâ Latinâ peragantur.

(No. 9.)—*Q. F. F. ℣. S.*—Statuta Solennia de Doctoratûs in Medicinâ Gradu in Academiâ Edinburgenâ capessendo, in posterum, jubente Senatu Academico, observanda.—1825.

I. Nemo ad Doctoratûs in Medicinâ Gradum promoveatur, priusquam Quadriennium in Academiâ Edinburgenâ, aut in aliâ Academiâ, ubi alumni ad Summos in Medicinâ Honores promoveri soliti sunt, per sex saltem menses quotannis, Medicinæ studio impenderit; nisi 1825.

1. Qui jam evectus fuerit ad Gradum Magistri Artium in Academiâ quavis Scoticâ, vel ad parem Gradum in aliâ Academiâ, operâ quadriennium Literis et Artibus prius deditâ, quam ad Medicinæ studium se contulerit;

2. Qui, præter studia sua medica in Academiis,—alio insuper anno,—Nosocomium quoddam publicum, ubi ægri octoginta vel plures decumbere solent, per sex saltem menses frequentaverit—et curationi a Medicis vel Chirurgis ibi institutæ adfuerit;

3. Qui per spatium unius saltem anni in re medicâ Exercitûs, vel Classis Britannicæ, vel Societatis mercaturas in India Orientali facientium, occupatus fuerit.

Illi autem qui quamlibet ex his conditionibus absolverit, Gradum Doctoratûs consequi liceat, postquam triennium in hac aut aliâ Academiâ supra definitâ, Medicinæ studio se dederit.

II. Nemo Exercitationes ad Gradum Doctoratûs capessendum subeat, qui non testimoniis idoneis ostendat,

Primo, sequentibus, quas Scientia Medica complectitur, Disciplinis, sub Medicinæ Professoribus in hac aut aliâ Academiâ supra definitâ, semel vel sæpius se operam dedisse, scilicet,

ANATOMIÆ ET CHIRURGIÆ . . .	Per curriculum Sex Mensium;
CHEMIÆ	
MATERIÆ MEDICÆ ET PHARMACEUTICÆ .	
MEDICINÆ THEORETICÆ . . .	
MEDICINÆ PRACTICÆ	
REI OBSTETRICÆ, ET MORBIS FŒMINIS INFANTIBUSQUE PROPRIIS . . .	
MEDICINÆ CLINICÆ, scilicet Curationi ægrorum in Nosocomio Publico decumbentium, a Medicinæ Professore institutæ, et Prælectionibus habitis de iisdem ægris .	Per curriculum Sex Mensium, vel, per bina curricula Trium Mensium;

duabus ex his vel pluribus, singulis annis, et etiam,

BOTANICÆ	Per curriculum Trium Mensium;

Secundo, Duabus saltem ex sequentibus etiam Disciplinis (a seipso, prout sibi maximè conveniant, eligendis) in hac aut aliâ Academiâ supra definitâ se operam dedisse, scilicet,

ANATOMIÆ PRACTICÆ	Per curriculum Trium Saltem Mensium;*
HISTORIÆ NATURALI	
MEDICINÆ LEGALI	
CHIRURGIÆ CLINICÆ	
CHIRURGIÆ MILITARI	

Tertio, Præter curriculum Medicinæ Clinicæ jam præscriptum,—alio insuper anno,—per sex saltem menses, Nosocomium quoddam publicum, hic aut alibi, se frequentasse, ubi octoginta ægri decumbere solent, et curationi a Medicis vel Chirurgis ibi institutæ adfuisse.

III. Nemo Gradum Doctoratûs consequatur, qui non, unum saltem annum, in Academiâ Edinburgenâ, modo jam præscripto, Medicinæ studio impenderit.

IV. Quicunque honores Medicinæ ambierit, ante diem XXIV^um Martii, de consilio suo Facultatis Medicæ Decanum certiorem faciat, et illi tradat,

1. Autographum his verbis, "Ego —— —— gradum Doctoratûs in Medicinâ ambiens, seriò et

* Medicinæ autem Clinicæ et Chirurgiæ Clinicæ, uno eodemque tempore operam dare non licebit.

University of Edinburgh.

Appendix. Order XXXIII.

sanctè Medicinæ Professoribus et almæ Academiæ Edinburgenæ assevero, et hoc scripto meo testatum cupio, me unum et vigesimum ætatis annum jam complevisse (vel, si ita res se habuerit, ante diem proximum solennem esse completurum) et me esse liberum, scilicet nullius Chirurgi, aut Pharmacopolæ, aut alius cujusvis artificii Magistri servitio addictum, ut Discipulum, vel Tironem, vel Ministrum, qualis Anglicè dicitur *an Apprentice;*"

2. Descriptionem Studiorum suorum, tum in Literis et Artibus, tum etiam in Medicinâ, atque de his testimonia;

3. Dissertationem Medicam Inauguralem, a seipso linguâ Latinâ compositam, ut Professor aliquis, a Decano designandus, eam perlegat, et perlectæ scriptam suam testificationem apponat.

V. Ante quam tentamini de re medicâ subjiciatur Candidatus, Facultati Medicæ, conventu speciali et privato, ostendat, se linguâ Latinâ jam satis esse doctum; quod si non ita sit, exercitationes pro Gradu Doctoratûs, hac linguâ præcipuè peragendæ, non habeantur. Sin autem Professoribus de hac re satisfaciat, tunc Quæstio, vel vivâ voce vel scripto, statim habenda est, de variis quas Scientia Medica complectitur, disciplinis.

VI. Si quis, hac quæstione privatim habitâ, Candidatorum numero retineri dignus non existimabitur, duabus saltem ex supradictis (Sect. II.) disciplinis, sub Medicinæ Professoribus in hac aut aliâ Academiâ supra definitâ, per alium insuper annum operam det, antequam exercitationes iterum subeat.

VII. Si Candidatus, quæstione privatim habitâ, promoveri merebitur, illi statim tradantur duæ Morborum Historiæ, cum Quæstionibus subjunctis, ut, commentis, linguâ Latinâ scriptis, illas illustret, his commoda responsa reddat; tum historias ita illustratas, una cum Responsis suis, post decem dies, Professoribus proponentibus tradat, atque eadem, die VI^to^ Julii, coram Facultate Medicâ defendat.

VIII. Candidato, si, post primum periculum factum, probatus fuerit, Dissertationem suam inauguralem prelo subjicere liceat, nec tamen imperetur: dissertationis cujusque excusæ quadraginta exemplaria, Facultatis Medicæ Decano, die VI^to^ Julii, tradantur.

IX. Si Candidatus iterum a Medicinæ Facultate fuerit probatus, ejusdem Facultatis Decanus quæ gesta fuerint Senatui Academico renunciabit; cujus approbatione et auctoritate Candidatus Dissertationem suam in Comitiis Academicis, die XI^mo^ Julii, linguâ Latinâ, defendere jubeatur: tum, si Senatui placuerit, laboris et studiorum præmium, summos in Medicinâ honores, Gradum nempe Doctoratûs, more solenni, XII^mo^ Julii, consequatur.

X. Facultas Medica semper intra Academiæ pomœria, horâ decimâ ante meridiem, diebus supradictis, conveniet: et si quis Candidatus, sine gravi causâ, horâ abfuerit statutâ, huic, occasione neglectâ, nec ad ulteriora pericula progredi, nec Gradum Doctoratus hac vice assequi, licebit.

N. B.—*Hæc sunt Statuta de Studiis, pro Gradu Doctoratûs, omnium qui posthac ad Medicinæ studium se conferant. Eorum autem qui jam Medicinæ studiosi sunt, studia dirigenda sunt Statutis Solennibus jam editis.*

Representation by the Faculty of Arts to the Senatus Academicus, as to a Course of Preparatory Education for the Candidates for the Degree of M.D.

22*nd October*, 1824.

Adjourned Meeting.

22 October, 1824.

Present,—The Principal, Rev. Dr. Andrew Brown, Drs. Alison, Ballingall, Hope, Christison, Home, Monro, Graham, Sir William Hamilton, Professors Russell, Wallace, Jameson, Dunbar, Pillans, Bell, and Dr. Duncan, junior.

The Senatus next proceeded to inquire, whether any additional studies should be recommended or rendered imperative; and it was resolved that the subject of general studies should be considered before that of additional medical studies.

On this subject Professor Dunbar read a report from the Faculty of Arts, and Professor Wallace moved that the report be inserted in the minutes, which was agreed to. Professor Dunbar moved that the conclusions of the report be adopted, which was seconded by the Rev. Dr. A. Brown; but, on being put to the vote, was negatived.—The report is as follows:—

"*Report from the Faculty of Arts.*

"As this University and the public at large are both deeply interested in the qualifications necessary to make the degree of M.D. respectable, the Faculty of Arts imagine that they will not be thought to exceed the bounds of their duty, if they submit to the Senatus some observations upon the preliminary studies which they conceive to be indispensible for every graduate. It would have been far more agreeable to them had the Medical Faculty, in the regulations proposed respecting the studies of medical graduates, comprehended a more general plan of education; but as no proposition of the kind has been made, they feel it to be a duty they owe to the University and the public, not to allow the present occasion to pass without endeavouring to render the degree more respectable and more dignified than it has hitherto been; and now that the Senatus, in their boundless liberality, have agreed to accept of certificates of attendance on self-constituted teachers, they will not, it is presumed, be less indulgent to the radical professors in Universities, who were originally constituted to lay the foundations of general knowledge, and to prepare the youth for all the learned and liberal professions. Until the present period, the classes which graduates have been obliged to attend, have been purely medical, and their knowledge of literature and philosophy they have been allowed to pick up in the best manner they could. Many of them, it is well known, entered upon their medical studies with little or no previous acquaintance with general literature and science, and possessed but a very inadequate knowledge of the Latin language, although their examinations for a degree were conducted in that tongue, and they were also required to write a Latin thesis. When the previous education of many was thus so limited and imperfect, and the classes they found it necessary and expedient to

attend, when they came to the University, were numerous, and the time limited, they were obliged to put themselves under the tuition of grinders, who are understood to furnish them both with the language in which answers to questions must be made, and with theses, either written entirely with their own hands, or corrected to such an extent as to prove the inability of the candidates to prepare them so as to pass the revision of the medical professors. The Faculty of Arts are of opinion, that such a practice is neither creditable to the University itself, nor satisfactory to the public. They have no objections to the plan of substituting examinations in English, if it should be thought expedient; but they are unanimously of opinion that every graduate ought to possess such a knowledge of the Latin language, as shall enable him to write his own theses; and the only, at least the best criterion of his ability to do this, they judge to be a certificate from the Professor of Humanity in any of the British or Foreign Universities.

If the majority of medical students are deficient in a knowledge of the Latin language, they are still more so in that of the Greek. It is, in fact, believed, that not ten out of a hundred have the slightest acquaintance with that language. This surely must appear very extraordinary, when it is considered that the science of medicine owes, as far as it can be well ascertained, its origin to Greece; that several medical works of distinguished merit were written in that language; and that some of the Aphorisms of Hippocrates form a part of the trials of medical graduates. As the science of medicine owes its origin to Greece, so the language of that country has furnished it with almost all its terms, whether of a simple or compound nature. The Greek language is so intimately blended with the science of medicine, whether it appears in a Latin or an English dress, that it must be thought surprising to have been so generally neglected by any class of medical students, and still more so by those who aspire at the highest honours. If such as are intended for the profession were previously to acquire a competent knowledge of it, they would be able to understand at once the import and application of the numerous terms they must hear in every lecture, and read in every treatise. As it is, they have to learn at the same time the terms of a strange language, which they never can thoroughly comprehend without a knowledge of its principles, and the theory and practice of their art, a thorough and distinct understanding of which must greatly depend upon an accurate knowledge of the terms employed to communicate it. Besides, not an instrument is invented—not a discovery made, but recourse is had to the Greek language to characterize them. The Faculty may, therefore, with the utmost propriety, give it as their decided opinion, that without a competent knowledge both of the Greek and Latin languages, acquired, or at least improved, in those seats of learning where certificates of qualifications can be availing, no person ought to obtain the degree of M.D.

They are also of opinion, that an accurate knowledge of the powers and faculties of the human mind, with the various modes in which they are affected by external objects, and by particular habits, pursuits, and associations, is as necessary to an accomplished physician, as an acquaintance with the bodily organs, and the diseases to which they are liable. To preserve the "mens sana" in the "corpore sano" requires the knowledge of the philosopher with the skill of the physician, and many fatal mistakes, it is apprehended, are daily committed through the ignorance of medical men, in discovering and applying proper remedies to the diseases of the mind. The effect of strong mental feelings and excited imaginations upon the bodily health, as well as of various bodily diseases in breaking down and subduing the powers of the mind, can neither be well understood nor counteracted by one who has not devoted a good deal of his attention to mental operations. The Faculty, therefore, apprehend that attendance upon the class of logic would be of infinite importance and absolutely necessary for a well-informed and useful physician. He ought, it is presumed, to be able, from the facts presented to his view, to draw legitimate conclusions, and to follow out a train of reasoning in a strict and logical manner. To know the faculties of the mind and their various modes of operation, to apply them to the investigation of objects, and from the facts and evidence produced, to form right and sound judgments, to trace the different branches of an argument, and state it with precision and force, can only be effected by one whose mind has been disciplined in the study of philosophy, and exercised in the use of its faculties in the practice of logic.

Besides these branches, the Faculty of Arts think it necessary also to recommend the classes of mathematics, natural philosophy, and natural history:—the first, as the best study for inducing close habits of attention, and training to severe and strict modes of reasoning, and the other two as unfolding the laws of nature, explaining causes of various phenomena, the forms and appearances of natural objects, and the instincts, habits, and pursuits of the inferior creation. There are other branches of science which medical students ought to attend with great advantage, but the Faculty are unwilling to recommend more classes than are deemed essentially requisite.

The Faculty of Arts are impressed with the fullest conviction, that, independent of the knowledge to be acquired from attendance upon the classes recommended to form a part of the education of a physician, the discipline he must previously undergo, in being trained to habits of thought and reflection, and in having the powers of his mind exercised in a variety of ways, must be of essential benefit. By such a previous education he must come to the study of medicine with more enlarged ideas, with a far greater fund of knowledge, and with faculties trained to the art of reasoning, to the investigation of truth, and to the application of all his previous acquirements, to the business of his profession. No idea can be more erroneous, none more in opposition to all experience, than that these studies will render a physician hesitating and undecided, and disqualify him for the prompt execution of his duty. On the contrary, by being accustomed to reason and to judge, he will perceive more readily, and decide more rapidly upon whatever ought to be done on any emergency.

Besides, from the improved state of science, and the general knowledge which persons educated at an University are supposed to possess, a physician whose information is confined, in a great measure, to the details of his profession, must sink below the level he is expected to hold in the estimation of the world, and bring discredit upon the degree he has obtained. Though the public will always be disposed to place confidence in a skilful physician, they will do it the more readily, when they find him well informed and intelligent in other matters. From the extension of the British empire to distant countries and unknown regions, where much new and important information is to be acquired, no class of men is more likely in the exercise of their profession to visit them, and from none is a description of the nature of the country and its different productions sooner expected. If they happen to be ignorant of literature and science, if they know little of natural philosophy and natural history, it cannot be supposed, however rich and inviting the field, that they will be able to collect that species of information, or communicate it to the public in the manner which would be expected from them.

The Faculty of Arts are also of opinion, that such a course of study, as they have now pointed out to

University of Edinburgh.

Appendix. Order XXXIII.

22 October, 1824.

the Senatus Academicus, would create a material distinction between the physician and the surgeon, a distinction of vast importance to the former, and of great consequence at the present moment to the University. From all the information they can collect, it does not appear that there is any difference, or at most but a very trifling one, between the medical education of a physician and a surgeon; and in practice apparently none. No higher qualifications are expected from the one than from the other. Hence it has happened, that the physician has sunk in the scale of general estimation, while the surgeon has risen to his level. The Faculty can perceive no other plan more effectual, none more generally expected by the public, than by enlarging the qualifications of the physician, by obliging him to obtain that literary and scientific education which will give grace and dignity to his medical acquirements, and which appears essentially necessary to every one obtaining the highest honours an university has to bestow.

It may be apprehended, that if these branches already pointed out should receive the sanction of the Senatus, and the course of study, of consequence, should be prolonged, many young men, especially from England, would be deterred from taking their degree. The Faculty are perfectly aware, that for some time the number of graduates would be diminished, but they do not consider the circumstance as a very serious evil; on the contrary, they hold that as the degree would be rendered far more respectable, it would add to the dignity of the University, and increase the reputation of the medical school. It would convince the world that no views of private interest influenced the minds of the Senatus Academicus, but that they were willing, when salutary reforms were called for, to sacrifice everything for the public good and the dignity of the University. In England, no professional man, especially with a Scotch degree, is held in much esteem, if he happen to be deficient in classical literature. The want of a previous enlarged education has always been objected to the graduates from Scotland, and not without reason. It may, perhaps, be retorted, that the want of a medical education at the English Universities is a more serious evil, and it must be admitted to be so. The Faculty conceive that, by uniting literature and science with medical knowledge, the Senatus will give to the degree of M.D., conferred by this University, a paramount claim to distinction in every country; and while such an extended plan of education may deter some from aspiring at the highest honours of the profession, it will be the means of inviting others, with more advantages and better qualified to render the degree more respected.

Supposing, then, that the plan the Faculty have proposed should be adopted by the Senatus, the next consideration is, in what time could it be accomplished? The Senatus are aware, that intending students of Divinity must attend different classes in the University during four different sessions, before they can enter the Divinity Hall, and that the Society of Writers to the Signet require an attendance of two sessions from their apprentices before they are admitted into their offices. The former class of students must attend the Divinity Hall four sessions besides; and the latter serve an apprenticeship of five years, with attendance on the Law classes. The Faculty would not wish to impose any unnecessary hardship upon medical graduates; but they see no reason why they should be more favoured than other students, especially as they have the prospect, at the termination of their studies, of obtaining an honorary degree, on which to found claims of confidence and distinction. They are, therefore, of opinion, that the medical students could not do justice to the classes recommended under a period of two sessions. In the first session, Latin, Greek, Logic, or Mathematics, might be attended. In the second, along with any of these again, might be joined Logic or Mathematics, whichever was not attended the preceding session, and Anatomy. The whole period of study they would recommend to be five years, and in any of the three last, chiefly devoted to the study of medicine, may be included Natural Philosophy and Natural History; and they are of opinion that a summer course of attendance on this latter class might be allowed.

In thus stating their opinions to the Senatus Academicus, upon this most important question of the qualifications necessary for obtaining a degree in medicine, the Faculty of Arts have no other end in view than how to support, according to the best of their judgment, the respectability and dignity of the University. When changes are to be made, they should be made to meet the circumstances of the times, and the reasonable expectations of the public, without endangering the constitution or hurting the reputation of the body. The experience of all ages shews that learned communities have suffered far more from too great laxity in discipline, and a facility in conferring honours, than from strict rules and high qualifications. In proportion as honours have been more difficult of attainment, they have been the more eagerly sought after.

The following Paper was presented on the 18*th of August*, 1829, *and ordered to be printed.*

18 August, 1829.

As far as my observation goes, the degree of M.D. from Edinburgh is not held in the same estimation with the same degree from Oxford or Cambridge, and I am assured by persons of competent authority, who are not biassed by prejudice, that it is not without reason this distinction is made.

Graduates from Oxford and Cambridge have in general the advantage of possessing a better preliminary education, and they are obliged to devote a greater number of years to study before they can be admitted Doctors of Medicine.

Many graduates from Edinburgh are well-educated, well-informed men, not inferior in general acquirements to the Oxford and Cambridge physicians. But the majority, I fear, are of a different description. The persons, to whom I allude, may be sufficiently qualified to practise physic, though even in that respect they are not superior to the greater part of the young men destined to be general practitioners. But they are deficient, and often lamentably deficient, in attainments not strictly required for the exercise of their profession.

The natural result of this disparity among Edinburgh graduates is to lower the whole body in public estimation, and to bring down the better-educated and better-informed to the level of the persons of inferior education and acquirements, in whose company they are found. This is unjust to the higher class of graduates, and of little or no benefit to the lower. In every part of the kingdom, and in the metropolis itself and its vicinity, one meets with Edinburgh graduates, acting as surgeons or as general practitioners, having dropped their title of M.D., and put their diplomas in their pockets. While they remain in this situation, it is obvious that their medical diploma can be of little or no use to them. In truth, the only advantage they derive from it is the privilege, in country towns, of affixing their initials to a prescription, and the vanity of boasting, if they are so inclined, that they have their degree from the same university with Dr. Holland or Dr. Babington. When advanced in life, and retired from practice as apothecaries, it is in their power, indeed, to reassume, like the nobles of Bretagne, their honours which had lain in abeyance, and take precedence of their *quondam* associates, who with the

same education, had not exercised the same foresight. But it will hardly be thought, that these little gratifications of vanity are legitimate reasons for prostituting the highest honour it is in the power of a medical man to derive from his profession.

It is argued, that the demand for the highest rank in medicine is limited, and that to many the possession of it is of no value. Granted. But is that a reason for increasing the supply? Is that a reason for sending forth doctors by hundreds every year? Is it not unreasonable to argue, that because the demand for medical men of the highest rank is limited, the university of Edinburgh ought therefore to have the privilege of conferring that rank with a facility that multiplies the number beyond the demand, and degrades the distinction it is meant to convey? One would suppose, from this line of argument, that Edinburgh College had been so chary of the honours it has to bestow, that, small as the existing demand, it was not effectually supplied from Scotland. But the case is precisely the reverse. The complaints against the Scotch universities are—that they supply a greater number of doctors than the wants of society require—that they manufacture a baser article than Oxford and Cambridge—affix the same stamp to it—and introduce it in such quantities into the market that the whole cargo is depreciated—and when their coinage happens to be of sterling worth, that its value is lessened by the plated and Brummingham articles that have issued from the same mint.

But defective as the system pursued at Edinburgh, it is perfection in comparison with the practice of some of the other Scotch universities, which have been in the use to make doctors on affidavits, and like John Doe and Richard Doe of forensic renown, to be pledges for every applicant, who complied with the forms, and could afford to pay the fees of court.

If it be desirable to maintain in the medical profession a class of persons enjoying higher rank and greater consideration than ordinary practitioners, why take so low a standard, as that used in the Scotch universities, for the highest title a medical man can obtain? Why confer it on multitudes, who are in no respect superior, in medical skill or professional knowledge, to the common run of general practitioners, and whose attainments and education are confessedly inferior to graduates from the English universities, who of necessity have the same title, because no higher title can be bestowed?

To what extent the demand of higher qualifications for medical honours at Edinburgh College might affect the pecuniary interests of its professors, I am not prepared to say; but I am sure it would raise the value of their diplomas, and settle beyond a doubt the real merit of their School of Medicine. I am far from wishing to underrate the Edinburgh professors; but I must be permitted to remark, that under their present system of conferring degrees, the number of students that flock to them for instruction, is no more a test of the value of their lectures, than the resort of young couples to Gretna Green is a proof of the piety of the blacksmith who gives them his nuptial benediction. While the metal which they transmute into doctors is suffered to have more alloy in its composition than is permitted in England, and is sold at a cheaper rate, it will be in greater request, on the same principle that there are more purchasers of plated candlesticks than of silver ones.

But though some men go to Edinburgh in order to obtain a rank in their profession, which they could not otherwise acquire, and to which, from the deficiencies of their education and the mediocrity of their attainments, they have no right to pretend, the great majority of students go to learn their profession; and where they are well taught, there will they go, whether they expect to be decorated with degrees or not. If the Edinburgh professors do their duty, and in comparison with other teachers are duly qualified to afford instruction, they may lose graduates, but they will not lose students by the change.

It is said that physicians of first-rate education and of great attainments, are often without patients, while men comparatively of small acquirements are in the highest practice. To this it may be answered, that they are grievously mistaken, who expect that learning or academical honours alone will inspire confidence or ensure practice; that many other requisites are necessary for success in the medical profession; that attention, patience, good sense, quick discernment of character, promptitude and decision of judgment, equally remote from rashness and obstinacy on the one hand, and from unsteadiness and hesitation on the other, are qualities as necessary as learning and professional knowledge to the success of a medical practitioner. But the question is, not by what process doctors may be created, who shall step at once into practice, and without any other qualifications than their certificates, obtain the confidence of the public; and for this plain and obvious reason, that no laws or regulations of universities can produce such a result. Medicine is a practical art, and those who are considered, whether justly or not, to be the most skilful practitioners, will have the greatest practice. More confidence will be placed in an old apothecary than in a young physician; and if, as not unfrequently happens, their medical education has been the same, the public will not be much in the wrong. That an apothecary who has been in extensive practice for thirty years, and at the end of that time becomes a consulting physician, should carry away the practice of a country town from a learned physician, his neighbour, who has passed a long life in study, without having seen a patient out of the precincts of his own family, is not at all surprising, nor, to say the truth, very unreasonable. It is a misfortune, distressing, no doubt, to the physician, and yet impossible, I fear, to remedy. But it is not to the consideration of these grievances that our attention is called. On the supposition that a higher and better-educated class of medical practitioners is wanted, to a certain but to a limited extent, we are asked, how is that class to be supplied? What sort of education is to be required from those who aspire to it; ought there to be a different standard in Scotland from that which is used in England; ought, in short, the Scotch professors to be suffered, at their discretion, to enrol natives of Lilliput and Brobdignag in the same regiment, and send them with certificates to London, testifying that they are of the same size, and qualified to serve in the same company?

Though medical degrees were of more difficult attainment, medical students would not study a jot the less. Men study not to get a degree, but to learn a profession by which they are to gain their livelihood. Between those who mean to graduate, and those who have no such intention, there is no perceptible difference in assiduity and application to their studies. Industrious and idle persons are to be found in both classes. Many an ignorant and idle student have I known at Edinburgh, who qualified himself for graduation by taking lessons from a grinder, and learning by rote to answer the questions usually and necessarily put to candidates by their examiners. Many a graduate have I known who could not have distinguished one disease from another; and if taken to the bedside of a patient, and told what was his complaint, who could not have ascertained from the symptoms what was wanted for the cure.

Some of the Edinburgh professors, conscious of the defects of their present system, have proposed, that where graduates are possessed of higher qualifications than common, the title of *Philosophiæ Doctor* should be added to that of M.D. in their diploma. But while the title of M.D. continues the

University of Edinburgh.

Appendix. Order XXXIII.

18 August, 1829.

highest medical honour, the objection will still remain, that this highest honour is prostituted by the Scotch universities; and the inconvenience must still subsist, that a Scotch degree will be held in less repute than one obtained from Oxford or Cambridge.

The innovation introduced by the Dublin College is too minute to be practically useful, and seems purposely contrived that it may be imperceptible to vulgar eyes.

If it be desirable to raise the character of Scotch degrees, there is no remedy but one, which is to compel the Scotch Universities to exact higher qualifications from their candidates.

The improvement recently adopted by the Edinburgh College is calculated in a considerable degree to produce the desired effect. By including midwifery in their course of study, it will be no longer possible for an Edinburgh graduate to be unacquainted with the peculiar infirmities of women and children; and by extending their term of study from three to four years, it will be in the power of their candidates to acquire a more competent knowledge of their profession in all its branches. But these innovations are not enough. Men who aspire to the highest honour in their profession ought to know something more than what is required from a practising apothecary. *That* additional knowledge ought to be supplied by the University; and besides qualifications strictly medical, an examination should be instituted, to ascertain how far the candidate is instructed in such other branches of science as he is expected or ought to be expected to possess.

To enable a young man to acquire those branches of knowledge within the four years prescribed to him for his education, I should recommend the following lectures to be delivered at Edinburgh in the summer vacation, and that all persons who were candidates for graduation should be compelled to attend them.

Summer Classes.

1. Botany and Vegetable Physiology.
2. Zoology and Comparative Anatomy, with the Functions of Animals.
3. Chemistry—its General Doctrines, with a particular application to the Products of the Animal and Vegetable Kingdoms.
4. General Physics—Fundamental Doctrines of Mechanics, Hydrostatics, Hydraulics, and Pneumatics, without entering into minute details—Elementary Principles of Optics, with their application to Vision—the principal Facts in Galvanism, Electricity, and Magnetism.
5. External Perception—Association—Volition—and other general Doctrines of Mind.

Students having no previous knowledge of mathematics, and for want of that preliminary information unable to follow the demonstrations necessary in the course of lectures on general physics, ought to have a class of elementary mathematics provided for them, in which, beginning with algebra, and learning geometry through algebra, they might in six months acquire a sufficient knowledge of mathematics to follow the Professor of General Physics in his demonstrations of the elementary principles of that science.

Winter Classes.

1. Anatomy
2. Surgery.
3. Institutes of Medicine.
4. Practice of Medicine.
5. Midwifery.
6. Materia Medica and Pharmaceutical Chemistry.
7. Clinical Medicine.

Every one agrees that surgery should be taught separately from anatomy, and that it should be taught by a practical surgeon. It may not be absolutely necessary that the teacher should be still an operative surgeon, though I think it would be of advantage if he were. But of one thing I am clear, that no man can teach operative surgery well who has not been at one period of his life an operative surgeon.

A distinct and complete course of surgery, delivered by a practical surgeon, will render useless and unnecessary the separate establishment of a professorship for military surgery.

Clinical lectures on surgery must lose a great part of their value, when the Professor has no patients of his own, and must comment on the practice of other persons.

The Professor of Anatomy, when relieved from his lectures on surgery, will have more time to direct the attention of his students to the anatomy of the nervous system, in which great progress has been made of late years, and still greater progress may be expected. He will also have an opportunity of enlarging his lectures on those parts of physiology and pathology more directly connected with anatomy. The improvements recently made in pathological investigation have been immense, and the careful manner in which discussions are now conducted may be expected every day to throw additional light on the nature and progress of disease.

The suggestion of two Clinical Professors instead of one, having separate wards for patients and lecturing at the same time, should be adopted. But the Clinical Professors ought, if possible, to be men in extensive practice; and if that is not attainable at present in Edinburgh. they ought to be young men who have some chance of getting into practice. The situation ought to be permanent, and should no longer be permitted to circulate among professors, destitute, or nearly destitute, of private practice. Such persons can do justice neither to their patients nor to their pupils. To the latter they can impart no information but what they have themselves derived from books; and from want of experience in actual practice, they have neither the quickness of perception, nor decision of judgment requisite for the management of a difficult case, and indispensable in the treatment of an acute disorder.

Medical jurisprudence might be rendered a valuable source of instruction, if the lectures were accompanied, as at Paris, with experiments, shewing the effect of poisons on living animals; but as a mere course of lectures, the information to be derived from it cannot be greater in extent, or so accurate in degree as what, is afforded by books accessible to all the world.

There ought to be two distinct examinations for the degree of M. D.

In the first, or preliminary inquiry into the qualifications of the candidate, the Examiners ought to be the five Summer Professors, with the Professor of Humanity, or a substitute in his stead, approved of by the other Professors. The examination should begin by ascertaining whether the candidate had a competent knowledge of Latin, by making him construe and translate, in presence of the Examiners, a page of Virgil, and of the Orations or Philosophical Works of Cicero, taken at random; and that point having been established, each Professor should then examine him in his particular science, adapting his examination to the instruction given in his summer course of lectures.

This preliminary examination might take place at any interval before the second or final examination, and the candidate, who acquitted himself to the satisfaction of the Examiners, ought to receive

827

University of Edinburgh.

Appendix. Order XXXIII.

18 August, 1829.

from them a certificate to that effect; the production of which should entitle him, when qualified by age and length of study, to be examined for the degree of doctor of medicine.

The fees for this examination ought not to exceed one guinea for each Examiner.

The second examination ought to be a strict and minute inquiry into the knowledge possessed by the candidate, in all the different branches of his profession, and might, with advantage, be divided into two stages—the one comprising anatomy, surgery, and midwifery; and the other medicine and materia medica.

The examinations ought to be in English; but the candidate should be made to give sufficient proof of his familiarity with medical and pharmaceutical Latin, by translating into Latin, in presence of the Examiners, a medical prescription and pharmaceutical process, dictated to him in English by one of the Examiners.

Chemistry and botany are not more directly connected with medicine than natural philosophy or zoology. They ought, therefore, to be no longer considered as medical professorships. But as many students might wish to acquire a more extensive knowledge of chemistry than can be obtained in a summer course of lectures, they ought to have the choice of attending either the winter or summer course of chemistry.

If the term of study required for graduation could be extended from four to five years, it would be a great improvement; but if that extension of time is thought too great a change, coming immediately after the late regulation, which requires four years in place of three, a provision might be introduced, declaring that the years of study for classes strictly medical should not begin to be counted till the student was 18 years of age, or within months of 18 years complete. By this regulation, no person could receive the degree of M. D. till he was 22 years of age, or thereabouts.

If it were any gratification or advantage to the Edinburgh Professors, they might be allowed to decorate with academical honours an inferior class of students, who had made adequate progress in their professional studies, but possessed not general learning or attainments sufficient to entitle them to the highest honours in their profession. If such persons, after due examination and a shorter course of study, were entitled to diplomas, with some distinctive appellation, it would mark their proficiency in medicine, and elevate them above the general practitioner who had no title appended to his name. Persons so qualified might be authorized, without further examination, to become general practitioners, that is to say, to act as practising apothecaries, surgeons, and men-midwives, and to keep and prepare medicines for their own patients. Three years' attendance on medical and surgical lectures, with due attendance on hospitals and midwifery wards, would be a sufficient course of education for such persons.

I have thrown out this hint as one deserving consideration; but whatever may be thought of it, I am clear, that while the rank of M. D. exists, and is considered as the highest in the medical profession, it ought to be confined to men of liberal education, and general acquaintance with all the sciences connected with medicine; and that Scotch graduates should be raised as nearly as possible to a level with those who come from Cambridge and Oxford. I have said as nearly as possible, because, from the difference in their preliminary education, the Scotch graduates must, in general, be inferior in scholarship to those who issue from the English Universities. But that deficiency, I apprehend, will be more than compensated by the early period of life, at which they usually commence the practical study of their profession.

A physician, as the highest member of the medical faculty, ought to be acquainted with all the branches of his profession; and as far as his physical powers will admit, he ought to be able to practise them, if necessary. Nothing, therefore, can be more preposterous than the late Apothecaries' Act, which prohibits a physician from supplying his own patients with medicines, unless he submits to an examination, and receives a license from a company of trading apothecaries, who exact from the persons to whom they grant certificates, a much less complete education than he has already received. This anomaly ought to be corrected; and every graduate from an University, and every person who has received a diploma qualifying him to act as surgeon and apothecary, from the College of Surgeons in London, Edinburgh, or Dublin, or from any University authorized to grant such a diploma, should be permitted to act as a general practitioner, without a license from the Apothecaries' Company of London. It is quite enough for such a body to have the power of granting licenses in their own trade to persons who have not diplomas from higher quarters.

General practitioners ought to be allowed to charge their patients for attendance, and not compelled, as at present, in order to have an adequate remuneration for their trouble, to deluge their patients with drugs which are never tasted.

There is still a lower class of persons connected with medicine, called retail chemists or druggists. Such persons ought to be put under regulation, and not suffered to open shops for the sale of medicines, without an examination as to their knowledge of pharmacy, and of the doses at least, and general effects of drugs. They are too often the only persons to whom the poor can have recourse for medicines and advice, and as it would be great cruelty to put down their practice, so care should be taken, that besides knowing how to prepare a prescription, they have also some notion of the effects of medicines, and of the doses in which they may be safely administered.

The following Documents, relating to Medical Degrees and Education, were presented to the Commission, and lay upon their Table.

(1.) Printed Memorandum from the Army Medical Board. Given in by Dr. Alison, during his examination, 24th October, 1826.

(2.) Extract from the Edinburgh Medical and Surgical Journal, No. 87, 1st April, 1826, in regard to the Medical Officers of his Majesty's Naval Service. Given in by Dr. Alison, on the same occasion.

(3.) Printed Paper, "On the Qualifications of Medical Officers for the Army." Printed 26th January, 1827.

(4.) Petition of the Senatus Academicus of the University of Edinburgh, in regard to the Act 55 Geo. III., cap. 194, commonly called the Apothecaries' Act. Given in by Dr. A. Duncan, jun. during his examination, 26th October, 1826.

(5.) Paper, titled, "School of Physic in Ireland, instituted by Act of Parliament, for the Instruction of Students of Medicine, Surgery, and Pharmacy." Given in by Dr. A. Duncan, jun., on the same occasion.

University of Edinburgh.

Appendix. Orders XXXIII.

(6.) Letter from Dr. Monro, enclosing printed copy of Mr. Lawrence's Introductory Lectures to a Course of Surgery. Printed 11th November, 1826.

7. Printed Circular of a private association of physicians in London, in regard to a plan of improving the state of the medical profession.

8. Printed Representation from Mr. Peter Reid, on the Present System of Medical Education Printed 3rd October, 1826.

ORDER XXXIV. By whom are Candidates for Degrees examined, and what is the Form and Course of Examination? Are any of the Examinations for Degrees public, and do the same take place in Presence of the whole University? And if Examinations in public have been discontinued, at what Period were they so discontinued?

Return by the Senatus Academicus.

Candidates for Degrees in Arts are examined by the Faculty. They are required to wait upon each professor belonging to the Faculty, who examines them if he thinks it necessary, and reports to the next meeting of the Faculty. There does not seem to have been any regular public examination since 1708. For a short time, theses were prescribed, which were also publicly defended.

Candidates for Medical Degrees are always examined by the professors of the Medical Faculty exclusively; that is, by those who hold commissions from the Patrons, authorizing them to examine candidates for such degrees, and to whom all such candidates were directed to be referred, by the resolution of the Senatus Academicus in 1726. The form and course of examination now in use are explained in the Statuta Solennia of 1823. An alteration to a small extent will take place when those Gentlemen, who commence their studies in or after 1825, come forward as candidates, as will be seen by the Statuta 1825. The examination on the thesis, the day before the graduation, is public, but is not attended by the whole University.

Formerly this examination took place in the same day with the graduation, and the whole professors were summoned to it, but were not in the habit of attending. Since 1818, in consequence of the increased number of graduates, the examination on the thesis and the graduation have been held on different days, and the other professors have not been summoned to attend the examination. The Senatus beg leave to refer to a short memorial on the subject of the appointment of the examiners for the degrees granted by this University.

It appears to the Senatus Academicus very important to bring under the view of the Royal Commissioners the different modes in which examiners for degrees have been appointed to this University.

The appointment of these examiners, as well as the regulation of the studies for degrees, seems naturally to belong to the body on whose responsibility the degrees are granted, *i. e.*, the Senatus Academicus.

Accordingly, it appears by the College records, that after the division of the classes in 1708, the Senatus was continually in the practice of appointing certain professors examiners for degrees in arts, and of changing these very frequently, and of their own authority. Before 1726, it appears also from the College records, that candidates for the degrees in medicine were ordered by the Senatus to be examined by the single Professor of Medicine then existing in the College, with the assistance of two Fellows of the Royal College of Physicians, there having been at that time no mention of degrees in medicine, nor of examiners for such degrees, in the records of the Town Council.

Twenty-one graduations of persons, who had been exaamined in this manner, took place before 1726. In that year four new professors of medicine were appointed by the Town Council; and to these, for the first time, a power was given by the Patrons to examine for medical degrees. This power was confirmed by an act of the Senatus, 12th October, 1726, directing that, in future, "all candidates for "the medical degree be recommended to the medical professors in their own University for examina- "tion." Since that time additional professors of medicine have been appointed, in 1738, 1757, 1768, and 1824; and in all these cases the new professors of medicine have become immediately examiners for the medical degree, without any special act of the Senatus on the subject. It seems very desirable that it be now definitively fixed whether this power is to reside in the Patrons or in the Senatus, or whether, as may be held to have been the case, as to medical degrees, since 1726, the authority of both bodies should be exercised in the appointment of all such examiners.

ORDER XXXV.—Are any Degrees conferred by the University of Edinburgh without the examination or attendance of the persons on whom such degrees are conferred? Is this the case, or has it been the case, within the last 50 years, in regard to graduation in the Faculty of Medicine; and, if there has been any alteration in this respect, when did the same take place?

Return by the Senatus Academicus.

Degrees in arts are never conferred without attendance or examination, except on Students who have gone through a regular course at this University, and whose qualifications are well known to the Faculty.

The Degree of D.D. is conferred by the University of Edinburgh without the examination or attendance of the persons on whom such degree is conferred. There are one or two instances about 1733 of candidates for D.D. being subjected to examination by the Theological Professors individually*, at their respective houses. Such examinations have been discontinued since that time, but the Degree

* Inaugural Dissertations were published. *See* Rotherham.

829

University of Edinburgh.

Appendix. Orders XXXV.

is conferred on those only who are personally known to the members of the Theological Faculty; or whose high respectability of private character, or eminent attainments, are evinced either by published works, or by unquestionable evidence laid before the Senatus Academicus, through some of the members.

The Degree of LL.D. is conferred also without the attendance or examination of the person on whom it is bestowed.

No Degree in Medicine has been conferred for the last fifty years without the personal attendance and examination of the candidates. Nor has any such graduation taken place since 1726, except in one instance in 1752, when a Graduate of the University of Rheims was admitted, *ad eundem.*

ORDER XXXVI.—Are any of the Degrees conferred by the University of Edinburgh honorary degrees? and if so, in what Faculties?

Return by the Senatus Academicus.

The Degrees of D.D. and LL. D. in the Faculties of Theology and Laws are Honorary Degrees.

The Degree of LL.D. has always been confined, only as a compliment from the University, to eminent individuals.

About half a century ago, a few Honorary Degrees in Arts were conferred. None have been conferred of late years.

ORDER XXXVII.—A Return of all the Persons who have graduated at the University of Edinburgh, during the last 50 years; distinguishing the number obtaining degrees in the different Faculties, and in the Faculty of Medicine, specifying the number (if any) who have obtained Medical Degrees, during the same period, who had not attended any Classes in the University or were not personally examined at the time of graduation; the number who had carried on part of their medical education at other Universities; and also the number of medical graduates from the different parts of the United Kingdom, and those from Foreign Countries.

Return by the Senatus Academicus.

(1). Return for the last fifty years of the names of—1st, Graduates in the Faculty of Arts; 2nd, Graduates in the Faculty of Divinity;—3rd, Graduates in the Faculty of Laws.—*Not printed by the Commission.*

(2). Return of the Medical Graduates at the University of Edinburgh during the last fifty years, distinguishing the number from the different parts of the United Kingdom, from British Colonies and from Foreign Countries.

1823	93	63	4	22	3	1
1824	109	65	16	19	5	4
1825	140	92	7	27	7	6
1826	118	77	3	27	4	7*

* Two of the above gentlemen in this last column attended the Class of Botany at Edinburgh, in the three months immediately preceding their graduation.

The proportion of Graduates who had carried on part of their medical education at other Universities prior to 1821, cannot now be ascertained, nor can the number who had studied before that time wholly at other Universities be stated; but this last number was certainly extremely small, not more than one in four or five years till lately. In the English translation and explanation of the Statuta Solennia, published by order of the Senatus Academicus in 1783, it was stated that attendance on this University for one Session at least was expected from all candidates for graduation, in order that the Professors might acquire some knowledge of their character and conduct: And by the Statuta published in 1825, attendance for one Session on the University of Edinburgh is made imperative on all commencing their studies in 1825 or subsequently.

It may be observed that a large proportion of the Medical Graduates of this University have received a part of their medical education independently of any attendance on Universities, by apprenticeship to medical and surgical practitioners—by attendance on hospitals—or by attendance on lectures in Edinburgh, London, and elsewhere, unconnected with Universities. The certificates of such extra-academical education are presented by the candidates for examination, and examined by the Faculty; but they do not diminish the amount of University attendance required, excepting that by the regulations of 1825, attendance for six months on a great hospital, in addition to three years of University Education, and attendance on all the requisite lectures, is held equivalent to the additional Session of University study there imposed, and a similar allowance is made for a year's service in the Medical Department of the Army or Navy, or East India Company's Service, or for having, previous to commencing their medical studies at the University, obtained the degree of A.M.

ORDER XXXVIII.—What offices or situations, exclusive of Church livings, are in the gift or appointment of the Senatus Academicus, or of the Principal, or any particular professors, *ex officio*? And what are the duties, perquisites, and emoluments of the same?

Return by the Senatus Academicus.

No offices or situations, exclusive of church livings, are in the gift or appointment of the *Senatus Academicus*, or of the principal or any particular professors, *ex officio*, except the following:—

1st. The secretary has always been appointed by the Senatus Academicus. In one instance the right of appointment was contested by the patrons, but conceded.—(*See Papers*).

The duties of the secretary are to attend the meetings of the Senatus Academicus, and to minute their proceedings,—to conduct the correspondence of the University,—to superintend the matriculation of the students—to issue University certificates, and to make out and authenticate the diplomas or degrees granted in all the faculties. For this he has no salary; and his perquisites are 5*s.* for each certificate of university attendance to students; 15*s.* for each degree in arts; and 1*l.* 1*s.* for the degrees of theology and medicine. The degrees in laws are issued without the payment of fees, and he has no other perquisites or emoluments whatever.

2nd, The under librarians are appointed by the librarian. They attend in the library every lawful day during the year from 11 o'clock A.M. till 3 o'clock P.M.

The first under librarian receives a salary of 105*l.* per annum from the Joint Matriculation and Janitor Fund, by order of the Senatus Academicus.

He also has a free house in the college.

The second under librarian has a salary of 84*l.* a-year, 30*l.* of which is the salary allowed by the Honourable Patrons to the principal librarian, but paid over by him as part of the under librarian's salary; the remaining 54*l.* were ordered by the Senatus Academicus from the Joint Matriculation and Janitor's Fund, to render his salary more proportionate to his labours.

Besides these, a third assistant librarian has been employed in the college for several years by the librarian, in compliance with an injunction in the commission granted to him in 1809, to prepare forthwith two new catalogues of the library, but without specifying any salary, or intimating how the work was to be paid. The Senatus have granted this gentleman 40*l.* per annum out of the Joint Matriculation and Janitor's Fund.

The under librarians are inadequate to the discharge, with sufficient quickness, of the duties allotted to them; and the curators of the library have ordered trial to be made of another at the wages of 1*l.* 1*s.* per week.

3. The regius keeper of the museum of natural history also nominates his assistant.

4. The professor of botany has also the sole nomination of the curator and gardeners in the royal garden.

The curator has a salary of 100*l.* per annum paid out of the allowance granted by the Crown and town-council for the support of the garden, and 5*s.* from each of the students of botany. The allowance to the gardeners is from the same fund, and varies with the rate of wages.

University of Edinburgh.

Appendix. Order XXXVIII.

5. The conservator of the anatomical museum is named by the Patrons, but is removeable by the professor of anatomy.

6. The porter is nominated by the Senatus Academicus, in consequence of the great increase of labour devolved upon the janitor, both from the additional number of students, and the extent of the new buildings. Their several duties were fixed by the Senatus on 14th November, 1812.

The porter's salary was formerly 30*l.*, but has lately been raised to 40*l.* by the Senatus Academicus. It is paid out of the Joint Matriculation and Janitor Fund, and he has a free house in the college.

ORDER XXXIX.—Have the members of the Senatus Academicus any, and what power, privileges, or immunities in the towns, in which the College is situated, either in regard to burghal taxations or burdens, or as to exemption from the jurisdiction of the ordinary magistrates within the same?

Return by the Senatus Academicus.

The members of the Senatus Academicus of the University of Edinburgh have not at present any powers, privileges, or immunities in the town, either in regard to burghal taxations or burdens, or as to exemption from the jurisdiction of the ordinary magistrates within the same.

ORDER XL.—Have the professors individually, or the Senatus Academicus collectively, or any of the office-bearers in the College, any jurisdiction as magistrates within the city, in which the College is situated, either over the inhabitants thereof generally, or over the students of the said College?

Return by the Senatus Academicus.

Neither the professors individually, nor the Senatus Academicus collectively, nor any office-bearers in the college, have any jurisdiction as magistrates within the city over the inhabitants. They have jurisdiction, they believe, over the students within the precincts of the college, to the extent at least of trying and punishing academical delinquencies.

ORDER XLI.—In what manner are disorders, or delinquencies, or breaches of the peace, or improper conduct on the part of the students, brought before the Senatus Academicus? and by whom, and in what manner are the same punished?

Return by the Senatus Academicus.

Disorders or delinquencies, or breaches of the peace, or improper conduct on the part of the students, within the University, are brought before the Senatus by any of the professors or students, or by the janitor. If the misconduct of the student has not been very flagrant, he is required to express his sorrow for the offence, and is then rebuked by the principal. If he has committed a high breach of discipline, he is expelled.

ORDER XLII.—In whom is the power of expulsion of students vested? and by whom is it exercised, and on what authority is such power or claim founded?

Return by the Senatus Academicus.

The power of expulsion has been all along lodged in the Senatus Academicus, in virtue of the powers and privileges conferred upon it by the Act of the Scottish Parliament 1621, and has been occasionally, though very seldom, exercised.

ORDER XLIII.—Are students, who have been expelled from other colleges, excluded by any regulation from admission, matriculation, or graduation, at the College of Edinburgh? and if so, by what authority was such regulation introduced?

Return by the Senatus Academicus.

Students who are officially reported to have been expelled from other colleges are excluded from that of Edinburgh, according to ordinances of the Privy Council to that effect in 1611 and 1672, and according to an agreement among the different universities of Scotland.

ORDER XLIV.—Are students, on entering at the College of Edinburgh, if they have previously studied at any other, required to produce any certificates of good conduct from such other college?

Return by the Senatus Academicus.

Students from other colleges are not required, according to the present practice, to produce any certificates of good conduct, except in the divinity classes.

ORDER XLV.—Are Graduates of other Universities admitted *ad eundem* at the College of Edinburgh?

Return by the Senatus Academicus.

Graduates of other Universities may be admitted *ad eundem* in the College of Edinburgh. But, for a long period, no example of such admission has occurred.

ORDER XLVI.—What are the qualifications necessary for the office of Principal of the College of Edinburgh? May a Layman hold the office?

Return by the Senatus Academicus.

We are not aware of any document, issued by competent authority, which defines the qualifications necessary for the office of Principal of this College.

In reply to the question, whether a layman may hold the office, we shall merely state the fact, that in this University, from its commencement, every person filling the office of Principal has been a clergyman. A contrary opinion has prevailed as to one individual, Patrick Sands, who filled the office for two years—1620 to 1622. But there is evidence to shew that he was a minister of the Church, in the same manner, and as much as Bruce, Rollock, Pont, and other ministers of the concluding years of the sixteenth century, who were not ordained according to the present mode.

Details respecting the appointment of Mr. Sands as Principal, not printed by the Commission.

ORDER XLVII.—Does the Principal of the University of Edinburgh visit and examine the Students of any of the classes? and how often do such visitations take place?

Return by the Senatus Academicus.

There does not appear to have been any such duty as the examination of the students of the different classes ever imposed on the Principal. In the 'Disciplina Academiæ,' before mentioned, the following duty is prescribed in the section:—"Officium Primarii, viz., Scholas, ubi opus est, invisere," and "Quarto die hebdomadis, qui dies Mercurii vocatur, horâ tertiâ pomeridianâ, dato signo, conveniant "discipuli in communem aulam; ibi, post sacram lectionem, examinentur censores de ordine in singulis "classibus, et a singulis discipulis observato superiore hebdomade; et novi constituantur censores."

At the same time it is believed that while each regent taught his students "in ordine ad Lauream" for four years, and when there were only four classes in the University, it was customary for the Principal to visit and examine, or superintend the examination (by the proper regent) of each class. But there is not on the University records any instance of class visitations by the Principal.

The last Principal (Principal Robertson) on three or four different years visited three or four classes, (languages, &c.) heard essays, read, and admonished the students. The present Principal has done the same occasionally.

ORDER XLVIII.—Does the Principal of the University of Edinburgh teach any class, or give any course of Lectures? and if such duty has ever been performed, when, and by what authority was it discontinued?

Return by the Senatus Academicus.

The Principal of the University taught a Divinity class till 1620, when a separate Professor of Divinity was appointed.—Crawford's History, p. 52.

And since that time no class has been taught by the Principal. He retains the title of *first* Professor of Divinity. He may, therefore, teach, at his option, a class of Divinity, in which any branch or view of theological study shall be taught, which is not appropriated to other established and recognised Professorships of Divinity.

Till 1765, about two years after Dr. Robertson's appointment, the Principal delivered in his order, along with other Professors, a public discourse or dissertation, each session. Since 1765 the practice has been discontinued.

ORDER XLIX.—Does the Chancellor, or Vice-Chancellor, Rector, or Dean of Faculty of the University, exercise any and what authority or jurisdiction over the Principal, Professors, or Students thereof? and from what source is such authority or jurisdiction derived?

Return by the Senatus Academicus.

No Chancellor, Vice-Chancellor, Rector, or Dean of Faculty, exercises any authority or jurisdiction over the Principal, Professors, or Students in the University of Edinburgh.

ORDER L.—Are there any controversies, pleas, or disputes, now subsisting in the University of Edinburgh, in regard to the jurisdiction, powers, privileges of the Chancellor, Vice-Chancellor, Rector, Dean of Faculty, Principal, Professors, or any Office-bearers in the said University? and if so, upon what points connected therewith, and between what parties have such controversies, pleas, or disputes arisen?

Return by the Senatus Academicus.

There are no controversies, pleas, or disputes now subsisting in the University of Edinburgh, in regard to the jurisdiction, powers, or privileges of the Chancellor, Vice-Chancellor, Rector, Dean of

University of Edinburgh.

Appendix. Order L.

Faculty, Principal, Professors, or any office-bearers in the said University; except a protest taken against the Principal having a deliberative vote in the Senatus. At the sederunt 11th December, 1824, twenty-one members being present, Mr. Russell moved, that attendance upon a course of clinical surgery be made imperative on every candidate for a degree in medicine; Dr. Ballingall seconded the motion. While the question was under discussion, Dr. Ballingall was called away, and the vote having been put during Dr. Ballingall's absence, ten Professors voted for the motion; the other ten, including the Principal, who claimed both a deliberative and a casting vote, voted against it. The Principal then declared from the chair, that the motion was lost by his casting vote. Mr. Russell then protested against the Principal's deliberative vote, claiming the decision of the Senatus to be in favour of the motion. Dr. Ballingall having returned, demanded that his vote should be received, in consequence of his having seconded the motion. But his demand not being complied with, he entered a protest against this proceeding of the Senatus.

On the Table of the Commission.

(1.) Memorial by James Russell, Esq., Professor of Clinical Surgery in the University of Edinburgh, on the subject of the said Professorship. Presented 5th October, 1826.

(2.) Printed Remarks on the utility and importance of Clinical Lectures on Surgery, by Professor Russell.

Order LI.—Are there any controversies, pleas, or disputes now subsisting in the University of Edinburgh in regard to the members composing the Senatus Academicus, or the several Faculties or Professions, belonging to the Senatus Academicus, or as to the rights, and privileges, and powers of the Senatus Academicus over individual professors, or as to the classes belonging to the different Faculties? and if so, upon what points connected therewith, and between what parties have such controversies, pleas, or disputes arisen?

Return by the Senatus Academicus.

The Professors of medical jurisprudence and police, clinical surgery, military surgery *, and natural history, have very recently addressed a memorial to the Senatus Academicus, claiming "to be admitted, in some shape or other, into the medical faculty." This memorial was referred to the Professors of that faculty for their opinion, who have presented a report on it; but no decision has taken place in the Senatus, it having been agreed to refer the point to the decision of the Royal Commissioners.

The professor of civil history, as before observed, has also claimed to be admitted a member of the faculty of Arts.

(2).—Documents above referred to.

I.

To the Senatus Academicus of the
University of Edinburgh.

September 11*th*, 1826.

11 September, 1826. We, the undersigned medical Professors, beg to submit to the Senatus Academicus a request, that our respective chairs be added, in some shape or other, to the faculty of medicine. We do not desire, at present, to revive in the Senatus the late discussions regarding the extent to which we ought to be admitted to the privileges enjoyed by the existing members of that faculty. But as we conceive, that independently of the injury done to our classes, by their not being comprehended in the Curriculum of compulsory study for graduates,—our total exclusion from the faculty, together with the admission of the Professors of other branches, not more important to the education of the physician, is contrary to the practice of other universities, has lessened the respectability of our professorships, and is one among other causes why some of them have been so much neglected by the students of medicine,—we think it our duty to lay our respective claims again before the Senatus, so that they may be brought under the notice of his Majesty's Commissioners for the Visitation of the University.

(Signed) James Russell, Professor of Clinical Surgery.
R. Christison, Profr. of Med. Jurisprudence and Police.
R. Jameson, Hist. Nat. Professor.
Geo. Ballingall, Professor of Military Surgery.

II.

September 21*st*, 1826.

21 September, 1826. The Professors of the medical faculty have considered the short memorial, presented to the Senatus Academicus on the 12th September by the Professors of clinical surgery, medical jurisprudence and police, natural history, and military surgery, and beg to submit to the Senatus the following observations thereon.

In the records of this University, for nearly a century past, the term 'medical faculty' has been applied to those Professors only, who are styled, in their commissions 'professors of medicine,' or of the theory or practice of medicine. To these Professors the Patrons of the University, in 1726, and on several subsequent occasions, gave authority to examine candidates for medical degrees. The Senatus Academicus had previously delegated this power to the single professor of medicine existing in the University, and two fellows of the Royal College of Physicians: and by an Act of the 12th October, 1726, the Senatus resolved, that all candidates for the medical degrees in the University should be referred to the new Professors of medicine, then appointed for examination. The Professors of the medical faculty are not aware of any more formal institution of their faculty by the Senatus, nor of any other meaning which can be attached to the term, as used in this University, than this: that it refers to those Professors who

* On the Table of the Commission.—Memorial from Dr. George Ballingall, Professor of Military Surgery in the University of Edinburgh, on the subject of the said Professorship.—Presented 3rd October, 1826.

have been authorized by these acts of the Senatus Academicus, and of the Patrons, to examine candidates for the medical degree.

The privileges enjoyed by the existing members of the medical faculty are these, viz. :—1st, That of examining for the medical degree conferred on them by the above acts of the Senatus and of the Patrons; 2nd, That of taking charge of wards in the Royal Infirmary, and giving clinical lectures on the patients in these wards, conferred on them by the managers of that hospital in 174—; and 3rd, That of requiring attendance on these lectures, or on corresponding lectures in other universities, conferred on them by the Statuta Solennia of the Senatus Academicus in 1767, and subsequently.

They do not enjoy these privileges simply because they are members of the medical faculty. They are members of that faculty, because the first of these privileges has been conferred on them by competent authority. The others have been in like manner conferred upon them by the proper authorities, and at different times—do not necessarily belong to them as members of the faculty—and were not enjoyed by the first members of the faculty.

If these statements are correct, it is obvious that no professor can be admitted into the medical faculty, as hitherto constituted in this University, unless he is duly authorized to examine candidates for medical degrees, which privilege the Professors signing this memorial state that they do not mean to ask on the present occasion.

The Professors of the medical faculty, however, stated on a former occasion, that they should have no objection to the extension of the term medical faculty, so as to make it comprehend (as in other universities) all the classes, the subjects of which are intimately connected with medical science; provided it be distinctly understood, that the extension of the meaning of the term is not to involve or prejudge the question, whether any of the privileges shall be extended to other Professors. But it appears to them, that such a change, at so advanced a period of the medical school, would be inconvenient, and that it would be preferable to apply the general term medical department to the whole medical and surgical Professors.

On the subject of these privileges, the medical faculty beg further to observe, that as the Senatus consider it so essential an object to secure to themselves the power of regulating the qualifications of candidates for medical and other degrees, it seems reasonable and important, that a power of appointing examiners for such degrees should also be recognised as inherent in them.

Such a power was certainly exercised in former times by the Senatus Academicus; for after the institution of the first medical professorship in 1685, it was the practice of the Senatus to refer the candidates for examination to the single medical professor, and two fellows of the Royal College of Physicians; and the qualifications of at least twenty-one graduates were ascertained in that manner, and by virtue of that appointment of the Senatus. When the four Professors of medicine were appointed in 1726. with power to examine candidates, &c., the Senatus Academicus returned thanks to the College of Physicians for the assistance they had hitherto derived from that body in medical graduations, and resolved, that, in future, candidates for the medical degree should be referred to the medical professors in their own university only, for examination.

It appears also by the records of the University, that it was formerly the practice of the Senatus Academicus, to appoint and change the examiners for the degree in arts very frequently, and by their own authority.

This point the medical faculty think should be brought under the special consideration of the Royal Commissioners, perhaps in the answer to Qu. 34.

III.

To the Honourable the Senatus of the University of Edinburgh, the Petition of Sir William Hamilton, Professor of Universal History;

Humbly sheweth,

That the class of universal history ought to be admitted to the privileges of those classes which are in the University recognised as belonging to the Faculty of Arts, for the following, among other reasons :—

I. Because the class of universal history is now the only class of general literature and science which has not obtained some protection from the Senatus or the Patrons, and is consequently not only thereby deprived of the *positive* advantage which this protection guarantees, but *negatively* injured by the peculiar deprival of that countenance which has been so liberally extended to every other subject of liberal education, taught within the walls of the University.

II. Because the matter of universal history is of such essential and general importance, that it merits every recommendation and security for its study which the University is able to bestow; and while other branches have been gradually added to the Faculty of Arts, through the activity and personal influence of their professors, it would be derogatory to the wisdom and impartiality of the Senatus to allow a subject which, in all the *best organized* Universities of Europe, constitutes the *primary, principal*, and most extensive branch of necessary study in that faculty, to remain any longer in the University *exclusively* deprived of that fostering care which has been solicited and obtained by every other chair of general literature and science.

III. Because the privilege requested is of trivial burden to the students, falling only on those who choose to decorate their names with the empty title of a degree in arts.

IV. Because, while the Senatus have not merely hitherto done nothing to promote the interest of the historical class, they have, on the other hand (inadvertently I am confident), done much to injure its prosperity, if not to ruin its existence. A very large proportion of the gentlemen who attend the lectures on history, are intended for the profession of the law. But the Senatus, two years ago, thought proper to allow the Professor of Scots law to change his former hour of lecturing to that during which the course of history was delivered; in consequence of which, an interference of the latter with a class of primary and universal professional necessity, (positively protected by the regulations of the Faculty of Advocates, of the Society of Writers to the Signet, and of the other inferior law corporations,) was occasioned; and thus the Professor of History was deprived of those students of law who might otherwise have been desirous and found it convenient to attend his course. Nor could a similar hardship be avoided by his choosing a different hour; for, to say nothing of the far greater convenience to the historical professor of the hour of three, every other hour was occupied, and occupied by classes with which the interference would have been equally great, and the competition equally hopeless. Thus the only external advantage which the class of history ever enjoyed, in the relative arrangement of its hour, was

University of Edinburgh.

lost to it by an act of the Senatus, in which the injustice of the manner could only be excused by the confession of neglect towards the injured party.

Appendix. Order LI.

The Reverend Dr. Brunton, Reverend Dr. A. Brown, Dr. Alison, and Professor Bell, were appointed a Committee to report upon Sir William Hamilton's petition;—Reverend Dr. Brunton, Convener.

December 18*th*, 1824.

18 December, 1824. The Committee to whom Sir William Hamilton's petition was submitted, gave in a report, stating, that in their opinion it ought in the first place to be sent to the Faculty of Arts, which was agreed to, and that they should report to the first stated meeting.

January 15*th*, 1825.

15 January, 1825. On the Dean of the Faculty of Arts reporting that no written answer to Sir William Hamilton's petition had been prepared by that Faculty, in compliance with the remit of the Senatus, Sir W. Hamilton intimated, that he would at next meeting bring the subject of his petition under the consideration of the Senatus.

January 22*nd*, 1825.

22 January, 1825. The Principal read the following report from the Faculty of Arts in reference to Sir William Hamilton's petition:—

"The Faculty of Arts met according to summons, and having resumed the consideration of Sir William Hamilton's petition referred to them, unanimously agreed to report, that the course of study for the degree in arts being fixed by the authority of the Royal Commissioners, with strict injunctions that it be not changed in any of the Universities without the concurrence of the rest, they cannot propose to the Senatus Academicus to grant the prayer of said petition.

"Extracted from the Minutes of the Faculty of Arts, by

(Signed) "Andrew Brown, *Dean.*"

February 12*th*, 1825.

12 February, 1825. Sir William Hamilton moved that a remit be made to the Faculty of Arts to condescend on the specific regulations to which they refer in their report on his petition, where they assert that "the course of study for the degree in Arts was fixed by the authority of the Royal Commissioners, with strict injunctions that it should not be changed in any of the Universities without the concurrence of the rest:" which motion being seconded by Dr. Covemtry, the Faculty of Arts agreed to withdraw their report, as founded merely on recollection of some of its members in regard to the tenor of the documents in question. The Senatus accordingly remit to the Faculty of Arts, to present a new report on the merits of Sir William Hamilton's petition.

February 19*th*, 1825.

19 February, 1825. Reverend Dr. Brown, Dean of the Faculty of Arts, gave in a report on the subject of Sir William Hamilton's memorial; which was read, and ordered to lie upon the table.

Report of the Faculty of Arts, as to Sir William Hamilton's Petition.

Senate Hall, 17*th February*, 1825.

Faculty of Arts met—

Present,—Dr. David Ritchie, Professor Wallace, Professor Pillans, Dr. Brown.

17 February, 1825. The Faculty resumed the subject of Sir William Hamilton's petition, and concurred in the following Minute to be submitted to the Senatus:—

The Faculty of Arts having reconsidered Sir William Hamilton's petition, and the Report withdrawn from the Senatus by consent, unanimously agreed to submit the following opinion on the subject:—

That the Faculty of Arts consisted originally of four Regents, who, in every College in Scotland, conducted each his own class, during a curriculum in general of four years, through the Latin, Greek, Logic, Mathematics, Moral and Natural Philosophy, and laureated them at the end of that period: That in 1708, it was enacted by the joint concurrence of the Town-Council, the Ministers of Edinburgh, and the University, that each of the four Regents should be confined to one particular department—an arrangement, posterior to which, laureation, or the conferring degrees in Arts, appears to have seldom taken place: That, from the establishment of the University to the present time, no addition appears to have been made to the branches of literature and science required for the degree in Arts; and it is believed that the other Universities have rigorously adhered to the original system: That the Faculty are aware that two or three professors have been added, but these were appointed to teach some of the branches detached from the original chairs, as demanding a more extended discussion, and no new subjects whatever have been added to the course: That communications between the several Universities in Scotland have at various times taken place respecting degrees in Arts, but that these have all, it is believed, had a reference to the period of study, and never to any branches to be added: That the Faculty, therefore, do not find themselves at liberty to advise the addition of any new class; nor would they deem it constitutional and right to adopt any new branch, without the concurrence and sanction of the other Universities.

By order of the Faculty,

(Signed) Andrew Brown, *Dean.*

Senate Hall, 5*th August*, 1829.

5 August, 1829. (3.) At a Meeting of the Faculty of Arts on the subject of the recommendation in behalf of the Universal History Class, inserted in the Report of the Faculty, by order of the Senatus Academicus,

PRESENT—

Rev. Dr. David Ritchie,	Professor Leslie,
Professor Wallace,	Professor Dunbar—and
Sir William Hamilton,	Rev. Dr. Brown.

University of Edinburgh.

Appendix, Order LI.

It was moved by Dr. David Ritchie, and seconded by Professor Wallace, That the clause in reference to Sir William Hamilton's claim to have his Class made a necessary part of the Curriculum of Arts, beginning "The Faculty must also express their regret, that the Commissioners should have wholly overlooked the Class of Universal History; which, notwithstanding the acknowledged importance of its subject, has hitherto remained the only Class in this faculty, and the only Class regularly taught in the University, which is altogether without protection: They would therefore recommend, that if any alteration is made in the Curriculum, attendance on this class should be required to qualify for a Degree in Arts,"—made no part of the Report of the Faculty of Arts, but was inserted by authority of the Senatus Academicus, at a meeting held on the 20th July, 1829.

It was also moved and agreed to, That a Copy of this Mtnute be most respectfully transmitted to the Royal Commissioners.

From this Minute Sir William Hamilton dissented and protested, for reasons to be afterwards given in.

By order of the Faculty,
(Signed) ANDREW BROWN, *Dean.*

Extract from the Minute of a Meeting of the Senatus Academicus of the University of Edinburgh, held on the 28th November, 1829.

28 November, 1829.

"Sir William Hamilton moved, and Mr. Bell seconded, that Professor Pillans be requested to pro- "duce the paragraph relative to the Class of Universal History, which was read, on 3rd January, 1829, "to the Senatus Academicus, as an integrant portion of the Report of the Faculty of Arts on the Pro- "visional Resolutions of the Royal Commissioners.

"Professor Pillans produced the paper accordingly, which had unfortunately fallen aside, of which "the following is a copy:—'The Senatus recommend, that if any Extension be made in the Curri- "'culum of Arts, the Class of Universal History in that Faculty may obtain the protection which the "'importance of the subject deserves; as it is the only Class of any faculty regularly taught, which "'has as yet received no protection within the University or without; and as the changes proposed "'by the Commissioners would have the effect, both directly and indirectly, of extinguishing it "'altogether.'

"Sir William Hamilton then brought under the consideration of the Senatus, the Minute of the "Faculty of Arts, of date 5th August, 1829, of the following tenor:—

"It was moved by the Reverend Dr. David Ritchie, and seconded by Professor Wallace, that the "clause in reference to Sir William Hamilton's claim to have his Class made a necessary part of the "Curriculum of Arts beginning—'The Faculty must also express their regret, that the Commis- "'sioners should have wholly overlooked the Class of Universal History; which, notwithstanding "'the acknowledged importance of its subject, has hitherto remained the only Class in this Faculty, "'and the only Class regularly taught in the University, which is altogether without protection. "'They would therefore recommend, that if any alteration is made in the Curriculum, attendance on "'this Class should be required to qualify for a Degree in Arts,'—made no part of the Report of the "Faculty of Arts, but was inserted by authority of the Senatus Academicus, at a meeting held on "the 20th July, 1829.

"It was also moved and agreed to, That a copy of this Minute be most respectfully transmitted to "the Royal Commissioners.

"From this Minute Sir William Hamilton dissented and protested, for reasons to be afterwards given in.

"By Order of the Faculty,
(Signed) "ANDREW BROWN, *Dean.*"

"After deliberation, the Senatus Academicus resolved that the Resolution of the Faculty of Arts, "of 5th August, 1829, appears to have been founded on misapprehension on their part, and that the "original paper, which has now been recovered, be transmitted to the Royal Commission as having "made part of the Report of the Faculty of Arts read to the Senatus on the 3rd January, "1829.

(Signed) "ANDREW DUNCAN, *Sec.*"

Letter from Sir William Hamilton, received 16th October, 1828.

To the Honourable the Commissioners for visiting the Universities and Colleges of Scotland.

16 October, 1828.

The Commissioners require—1. An account of the subjects treated by me in the class of Universal History; and 2. A statement of my opinion, whether there is any probability of obtaining such a number of students as would render this class an useful and efficient one in the University. In compliance with these requests I have the honour humbly to submit to their consideration the following observations:

1. In regard to the first point. When appointed Professor of Universal History, it appeared to me, that the subject of the chair ought to be treated in two different courses, or at least in two distinct divisions. Under the one, I proposed to consider the determining circumstances of the political life of the different nations of ancient and modern times, in their external and in their internal relations. Under the other, the progress of cultivation, comprehending in that term the history of philosophy, literature, art, manners, religion, &c. This plan I have not as yet executed to its full extent; and the circumstances by which the prosperity of this class is at present checked, afford no encouragement to accomplish a double task, of which the recompence would be so ill proportioned to the difficulty. I have hitherto delivered only a single course: it comprises an historical survey of the relations of the political system of modern Europe and its dependencies—with a view of the progress of literature in the different nations.

II. In relation to the second point, I do not conceive that more is necessary to render the chair of Universal History as efficient and useful as any other in the University, than to place it on a footing with the others—either by withdrawing from them the external advantages they receive from the enforcement of a compulsory attendance, or by according to this class the same protection they enjoy. In all the Universities with which I am acquainted, *where a free competition between subjects and teachers*

University of Edinburgh.

Appendix. Order LI.

is permitted, the historical sciences are not less zealously studied than any others. While the single historical chairs in our Scottish universities, have been hardly able to maintain their existence—in Germany, from twelve to twenty different historical courses, in the same University, and in the same season, are delivered to audiences more numerous than those in almost any other department of knowledge. It is, in fact, only from the nature of the subject that it has not of late been found necessary, in this as in other unprotected chairs, to intermit lecturing, from the sheer want of a class. Experience has proved, in the case of every unprotected professorship, that neither the ability of the teacher, nor the general interest of the science, can enable it to overcome the impediments against which it labours. A chair, under the present system, can scarcely be called *founded*, unless it be *protected*.

Attendance on a class prescribed to those who aim at academical honours, or at being admitted to certain situations or professions; in other words, compulsory attendance, whether required by the University or by any other body, has two effects. Its *direct* effect is to secure attendance on the protected class, not only by the *necessity* imposed on a certain number of students, but also by the *recommendation* which it virtually conveys to all others, of the superior importance of the subject taught. A class, also, which is frequented by a numerous audience, is at once presumed, without much inquiry, to be eminently worthy of attendance. Numbers tend to multiply themselves; and every protection in favour of a class *occasions* the attendance of more than double the complement it *secures*. The *indirect* effect of the compulsory attendance of some classes, is to injure the voluntary attendance of others. The student being forced to prefer certain courses, he can consequently only follow others out of the *superfluity* of his time and money. And the system of protection has been carried to such an extreme, that there are comparatively few who do not find themselves fully engrossed with the classes they find it necessary to attend. At the same time, while they are explicitly told that some classes are of indispensable importance, they are implicitly informed that others are of very inferior utility. A class attended by few, is also lightly set down as not worth attending. In this respect it would be better for the unguarded classes not to belong to the University, than to be thus degraded by an odious contrast with their more favoured competitors. So long, also, as the system of protection is limited, while favoured classes are the exception, not the rule—the hardship on the other is comparatively light. But when the privileged chairs become the more numerous, their prosperity is then founded on the ruin of the unprotected. In these circumstances, your University protection is not an honour, but a condition of existence—while the want of it is a disgrace, and nearly tantamount to extinction. The class of Universal History is the only class of general literature which has never sought or never obtained any protection, either within the University or without.

Were this distinction between protected and unprotected classes founded on the greater or less importance of their subjects, the distinction itself would be less invidious. But this is not the case; and to speak only of the protection accorded by the Senatus, the history of the Faculty of Arts would show, that the interest of science, and the improvement of the student, have far less determined the extension of this privilege, than the personal influence of the professor.

(I may here also remark, that very considerable detriment has been done to my class by the injustice committed by the Senatus, in permitting (in my absence, and in opposition to every principle acknowledged and acted on by themselves) the Professor of Scotch Law to change his hour of lecturing to that during which the class of History has been always taught. In consequence of this, in a summer course which I once delivered, the number of students I found was more than a third greater than in any winter course.)

But not only does the system of external encouragement and repression affect the prosperity of this class in respect to numbers—it likewise diminishes the utility of the instruction to those pupils by whom it is attended. In the circumstances of the chair, it cannot be expected that the professor can regard it as more than a subordinate and temporary object; and while the subject itself requires, for its proper treatment, the most minute research and the most patient generalization, the lectures are precisely those which, as the University at present stands, would, in proportion to the greatest labour, repay him with the smallest return of reputation or emolument. To propose essays to encourage and direct private study, by instituting examinations on the lectures, and on prescribed books, and in general to stimulate emulation, would also be at present impracticable, from the small number and great inequality among the students. Yet, without such a discipline, oral instruction is deprived of its peculiar and most important utility.

In regard to the mode of remedying the evil, as the plan of placing the various classes on an equality, by withdrawing the prohibiting privileges of each, is probably impossible—I would humbly suggest that at least the marked, and almost singular exclusion from all protection should be removed, by the admission of this chair to the privileges of the other literary classes, attendance on which is exacted from those proceeding to the degree of A.M. This would secure only the annual attendance of (I believe) about ten or a dozen students. On this subject I beg to refer the commission to the memorial presented by me to the Senatus, and which of course is among the documents transmitted to them by that body. It was only subsequently to that memorial that I discovered, that the Professor of Universal History was a member (though unprivileged member) of the Faculty of Arts. The Faculty of Advocates might perhaps not be averse from protecting a chair of which they are the patrons, by rendering imperative on their candidates attendance on this and on the other classes of their appointment; and if the Society of Writers to the Signet would include the lectures on history among the courses favoured by their regulations, a more detailed deduction of the progress of jurisprudence would be allowed, than is competent in the present circumstances of the chair. By these means this class would be brought more upon a level with the other classes of the University; and I am confident, that when released from the fetters by which it is now confined, it might be rendered one of the most efficient and useful.

(Signed) W. Hamilton.

Order LII.—Are there any controversies, pleas, or disputes, now subsisting in the University of Edinburgh, as to the rules for granting degrees, or as to the *curriculum* or course of study necessary for Students graduating, at the said University? and if so, upon what points connected therewith, and between what parties have such controversies, pleas, or disputes arisen?

Return by the Senatus Academicus.

(1.)—Unfortunately an interference on the part of the town-council, as Patrons of the University, with regard to the *curriculum* required of candidates for the degree of M.D. has given rise to a difference

839
University of Edinburgh.
Appendix. Order LII.

between the Honourable Patrons and the Senatus, which has terminated in an action of declarator, raised by the magistrates and town-council against the Principal and Professors.

The regulation of this subject the Senatus humbly conceives, as a matter purely academical, to belong to them exclusively, as it has been exercised by them without challenge since the foundation of the medical school.

The history of this controversy, with the relative documents, has been already transmitted to the Royal Commissioners, under the title of 1st and 2nd Set of Papers.

The Professor of Midwifery, since he received a new commission from the Patrons of the University in August, 1824, has demanded that attendance on his lectures be made imperative on all candidates for graduation in the year 1826, and subsequent years. The Senatus agreed to make such attendance imperative upon all candidates, except upon those who had commenced their studies for the medical degree prior to the publication of the new edition of the Statuta Solennia in 1825, the first of which class of students will become candidates for graduation in 1828. The grounds of this dispute are precisely the same as those of the dispute which led to the law-suit with the Honourable Patrons.

(2.)—Narrative of the Origin and Steps of the Controversy, to the Period of the Commencement of the Action of Declarator raised by the Patrons for the purpose of enforcing their Claims.

In 1815, Dr. Hamilton, Professor of Midwifery, presented an application to the Senatus Academicus, praying that his class might be added to the course of study required of candidates for medical degrees. The Medical Faculty at that time gave an opinion, verbally, unfavourable to the petition, and no farther steps were taken in regard to it.

In January, 1824, the Senatus Academicus received a communication from the magistrates, Patrons of the University, transmitting a memorial which Dr. Hamilton had addressed to them, in which he prays that a new commission might be granted him, making him Professor of Medicine as well as Midwifery, and that attendance on his class might be rendered imperative on candidates for medical degrees.

On this occasion, the Medical Faculty (one half of which had been changed since 1815) reported to the Senatus, that there were many mis-statements of facts in the memorial, but that they were willing to give the fullest consideration to the claims of the midwifery class to be included in an improved and extended course of study for medical graduates, which they had for some time had in contemplation. On this being reported to the magistrates by the Senatus, the magistrates delayed any farther proceedings in regard to Dr. Hamilton's memorial, until they should receive the report of the Medical Faculty and of the Senatus, but expressed and transmitted to the Senatus an opinion decidedly favourable to the prayer of Dr. Hamilton's memorial. The Senatus replied, that it would afford them pleasure, if the opinion at which they should arrive in regard to the admission of the midwifery class into the medical *curriculum*, should coincide with that of their Patrons, and that they would always pay the most respectful attention to any suggestions of their Patrons on such subjects, but that *they conceived the regulation of the studies of candidates for degrees to be their own exclusive right.*

The magistrates then addressed a message to the Senatus Academicus, *claiming for themselves the power of regulating the studies to be required of candidates for degrees in the University.*

Still, however, it was hoped for a time, that there would be no necessity for the agitation of this general question on the present occasion.

On the 18th June, 1824, the Medical Faculty reported again to the Senatus, that their opinion was favourable to the introduction of the class of midwifery, under certain regulations, into the *curriculum* of medical graduates, in the next edition of the *Statuta Solennia*, along with *some other*, and, as they thought, *more important alterations;* particularly *an extension of the term of study from three to four years.*

The Senatus accordingly informed the magistrates, that the Medical Faculty, *as a part of an extensive system of changes*, meant to propose that attendance on the midwifery class should, *on certain conditions*, be required of such students as might hereafter become candidates for graduation.

Afterwards the magistrates gave Dr. Hamilton a new commission, in the same terms as those originally granted in 1726 to the Professors of the Faculty of Medicine, that is, making him Professor of Medicine, and empowering him to examine candidates for medical degrees.

The proposals of the Medical Faculty for extension of the medical *curriculum*, including the addition of the midwifery class, were laid before the Senatus in July, 1824, and various meetings to consider them were held in October following.

In consequence of the inadvertence of some of the members of the Medical Faculty, it was in the first instance proposed, that the new regulations, if agreed to in October, 1824, should come into operation at the graduation of 1826; but at one of the meetings held during that month, it was represented by members of other Faculties, that it was inexpedient, and contrary to the usage of the University, to give to any such regulations, as should impose additional attendance on lectures, a retrospective operation; that is, to affect candidates, who had commenced their studies for degrees prior to their enactment; and this principle was accordingly agreed to by the Senatus.

After several meetings in October, 1824, it was found impossible, in consequence of the difference of opinion that existed in regard to several articles in the new regulations, and of the absence of several members from town, to have these regulations adjusted to the satisfaction of the Senatus, before the commencement of the ensuing session, 1824-5.

It was then represented to the Senatus, to be necessary, that the medical students who were about to commence or renew their studies, should be informed what course of study would be required of them, as it was known to some of the Professors, that some students had left the University, and that others were disinclined to come to it, owing to the uncertainty as to the regulations that would be enforced.

Under these circumstances, it was agreed to issue a notice, informing the medical students then in attendance, or about to commence it, that the existing regulations, only, would be enforced in regard to them.

On the 8th of November, the notice agreed to, as above-mentioned, being yet unpublished, Dr. Hamilton applied to the Senatus to have it altered, to the effect of making attendance on his class immediately imperative; but this application was refused, for the reasons already mentioned, and on the ground, that the addition of his class to the *curriculum* had been stated to be in contemplation, only *as a part of a more general extension*, both of the term and course of study, as to which the Senatus had not yet finally determined.

The discussions in regard to the proposed new regulations were resumed in the Senatus on the 20th

University of Edinburgh.

Appendix. Order LII.

of November, and continued by several adjournments till the 18th of December, 1824, when the whole of the regulations or *Statuta Solennia* published in 1825 were adjusted.

On the 27th December, 1824, the Senatus received a communication from the magistrates, requiring them to recall the notice of the 25th of October, and to notify to the students of medicine, that attendance on the class of midwifery would be required of all the candidates for graduation in 1826. To this the Senatus, on the 10th of January, 1825, returned an answer, declining, for the reasons therein stated, to rescind their previous notice.

The demand for the recall of the notice of the 25th of October was several times repeated by the magistrates, and a long course of discussion ensued.

The idea of a Royal visitation having occurred, as the most fitting expedient towards obtaining an adjustment of the controversy, the Senatus proposed to the magistrates to make a joint application to the Crown for such a visitation. No notice being taken of this proposal, the Senatus next suggested an amicable conference of committees of the two bodies, for the adjustment of the points in dispute. This being declined, they prepared a fuller statement of the grounds on which they had acted, in issuing the notice of which the magistrates complained; and having been informed in a reply by the magistrates, after a short intermediate correspondence, of their intention to hold a visitation in the University, for the purpose of enforcing immediate attendance on the midwifery class on candidates for graduation, they addressed a respectful remonstrance to the magistrates. But all these measures were ineffectual in dissuading the magistrates from insisting on the recall of a notice, which the Senatus had thought it their duty to issue, and by which they considered themselves bound in honour to abide.

On the 1st November, 1825, the Senatus presented a humble petition to his Majesty, praying for a Royal visitation, "For ascertaining and declaring the rights, powers, privileges, and immunities of the Senatus Academicus, in whatever relates to the interior discipline of the college, and more especially in the regulation of the scientific and literary studies of candidates for those academic honours and degrees which the Senatus Academicus are solely authorized, by the constitution of the University, to dispense and confer."

This petition having been subsequently referred to the Lord-Advocate by the Secretary of State, a full statement of the grounds on which the Senatus had proceeded, and of their reasons for resisting the claim of the magistrates, was prepared and submitted to his Lordship.

On the 10th November, 1821, the Lord Provost, magistrates, and council, held a visitation in the college, and read an act of the council, enacting and declaring, "That from and after this date, attendance must be regularly given for one course on the class taught by the said Dr. Hamilton, Professor of Midwifery and of the Diseases of Women and Children, or on a class in which midwifery is taught at some other University, at which the highest medical honours are conferred, by all medical students, candidates for medical degrees, and who are to be examined by the medical Professors, in virtue of the privilege to examine and graduate students bestowed on them by the terms of their commissions from the said Lord Provost, magistrates, and council; and that from and after this date, no medical degrees shall be conferred, except in terms of this resolution."

On this occasion it was again stated, that the Senatus Academicus "claims for itself the privilege and power of enacting the regulations and course of discipline to be observed by the students, in order to entitle them to the literary or scientific degrees and honours which it is the office and duty of the Senatus Academicus to confer; and that it would be an unsound, if not an unwarrantable exercise of its discretion, to enforce the new regulations enacted on the 18th December, 1824, against any of their students, candidates for the degree of M.D., who have been matriculated, and have entered upon their courses of medical study prior to the publication of those regulations in January, 1825."

An action of declarator was then brought before the Court of Session at the instance of the Patrons against the Senatus Academicus, the object of which action is to have it found and declared, that the exclusive right of making laws and regulations for the discipline and course of study to be pursued in the University of Edinburgh, and the qualifications requisite for obtaining degrees is vested in the magistrates and town-council of this city.

Controversy with the Town-Council.

Documents respecting this Controversy, presented by the Senatus Academicus, and lying on the Table of the Commission, but not ordered to be printed:—viz.:

1. Documents respecting this Controversy between the Patrons and the Senatus Academicus of the University.
2. Petition of the Senatus Academicus, praying that his Majesty would be pleased to order a Visitation of the University.
3. Case presented to the Lord Advocate in support of the prayer of that petition.
4. Papers relative to the Proposal of the Senatus Academicus to submit their Controversies with the Patrons to the arbitration of the Royal Commission.
5. Letter from the Very Reverend Dr. Baird, Principal of the University of Edinburgh, enclosing communication from the Town-Council in answer to the late renewed Proposal of the Senatus Academicus for the submission of the existing Controversies between these Bodies to the Commission. Presented to the Commission, 7th October, 1826.
6. Printed Copy Summons of Declarator at the instance of the Lord-Provost, Magistrates, and Council of the city of Edinburgh *v.* the Principal and Professors of the University of Edinburgh.
7. Printed Copy of Defences made by the defenders to said action.

Documents respecting this Controversy presented by the Town-Council, and lying on the Table of the Commission.

(1.) Act of Council, containing new Commission in favour of Dr. Hamilton, 21st July, 1824.
(2.) Commission in favour of Dr. James Hamilton, Jun., as Professor of Midwifery, 21st July, 1824.
(3.) Act of Visitation of the College by the Town-Council, 10th November, 1825.
(4.) Act of Council, directing to prepare summons of Declarator against the Principal and Professors, 16th November, 1825.

Order LIII.—Is there any Authority or corporate Body, Office-bearer, or any set of individuals, who have any right of instituting new Faculties or Professorships in the University of Edinburgh? and if so, what are the rights and Academical privileges and immunities belonging to the same so instituted?

Return by the Senatus Academicus.

New Professorships in the College of Edinburgh can be founded only by the authority of the Patrons, or of the Crown. Against the exercise of this power by the Crown, however, a protest is regularly taken by the Patrons, that it shall not hurt or prejudge their rights. The rights and privileges of new Professors are the same with those of other Professors.

The Senatus Academicus acknowledge no authority, but their own, for instituting new Faculties, and for fixing the privileges and immunities belonging to them

The Academical rights and privileges, belonging to the different Faculties in this University, are of little importance. Faculties with us are not separate corporations, but only associations of individual Professors, who are employed in teaching the same classes of subjects, who recommend to the Senatus the candidates for degrees in their own Faculty, examine into the qualifications of the candidates, and suggest regulations to the Senatus concerning the mode of teaching the branches belonging to the Faculty; but none of whose proposals or regulations can be carried into effect, without the authority of the Senatus.

Order LIV.—Are the Professors of such new classes admitted Members of the Senatus Academicus, or of the Faculties in the College, with the subjects and department of which such classes are connected?

Return by the Senatus Academicus.

The Professors of such new classes are admitted members of the Senatus Academicus: but in this University have not, in practice, been considered as necessarily of the faculties of theology, law, or medicine, though their subjects are connected with these departments.

Order LV.—Do the Students, or any of them, live within the buildings or the precincts of the College of Edinburgh, or in any manner under the inspection and observation of the Professors?

Return by the Senatus Academicus.

None of the students live within the buildings or precincts of the College; nor are they under the observation and inspection of the Professors by any University statute or regulation, farther than while within the class rooms and public area.

Order LVI.—Is there any Academical Dress prescribed in the College of Edinburgh?

Return by the Senatus Academicus.

There is no academical dress now used in the College, except the Professor's gown, while engaged in the academical duty.

Order LVII.—Were any buildings in the College of Edinburgh, at any time appropriated for the residence of students, and any funds destined or employed in the repair and maintenance thereof? and, if such buildings are not so occupied, when did such change take place,—under what authority,—and how are the funds now employed which were destined or formerly employed in the repair or maintenance of such buildings?

Return by the Senatus Academicus.

An answer will be sent to this query by the honourable Patrons, who alone possess the requisite information; and to whom, the Senatus understand, this query has been sent by the Royal Commission.

Return by the Town-Council.

It appears originally that part of the building was appropriated for the residence of students, and that sums were destined and employed in the repair and maintenance thereof, and also not unfrequently for the building of chambers. About the year 1717, however, it would appear that few students would reside within the College; for by Act of Council, of this date, a copy of which is herewith transmitted, a committee was appointed to redress the evil of few students inhabiting, and the rent being thereby diminished. That, of this date, another committee was appointed for the same purpose; and, of this other date, a report is entered on the council-record, by which it would appear, that there was not one student then occupying chambers. Copies of the two last acts are also sent.

In the building of the College, now about to be completed, no accommodation is set apart for Students; but the funds which were destined to and employed in the repair and maintenance of such buildings, will fall to be employed, as they have been for many years, in the general repair and maintenance of the fabric, though they will go but a very short way in doing so.

University of Edinburgh.

Appendix. Order LVII.

On the Table of the Commission and not Printed.

(1.) Act of Council for regulating Rent of Chambers and Fees of Students, 14th March, 1595.

(2.) Act of Council in regard to Students' Chambers, 13th December, 1717.

(3.) Act of Council in regard to Students' Chambers, 14th November, 1733.

(4.) Act of Council in regard to Students' Chambers, and Rental of Chambers, 19th December, 1733.

ORDER LVIII.—Do any of the Professors of the College of Edinburgh reside in any houses, or buildings, within the precincts of the said College, and by what authority were the buildings so occupied and appropriated? from what funds are the same repaired and maintained? by what authority were such funds appropriated to that object, and by whom is the expenditure of the same regulated and applied?

Return by the Senatus Academicus.

No Professor of the College, as such, resides in any house or building within the precincts of the College.

The Reverend Dr. Brunton, Professor of Oriental Languages, occupies a house in the College, not in consequence of his character or office as a Professor, but in consequence of his character and office as Joint-Librarian. It is proper, however, here to add, that the right of the Librarian to the house in question is challenged by the Principal.

Return by the Town-Council.

By Act of Council, 6th December, 1689, a copy of which is sent herewith, it would appear to have been the intention of the Patrons, that each of the Professors should have a chamber. Latterly, the Principal and the following Professors, viz. Divinity, Hebrew, Greek, Humanity, and Mathematics, and the Librarian, had houses in the College buildings.

* * * * *

Mr. Playfair's plan contains chambers for the Principal and a house for the Librarian. This last office is at present filled up by the appointment of Joint Librarians, both Professors, one of whom occupies the house destined for the Librarian.

The chambers, houses, and whole fabric of the College, appear, from the accounts herewith produced, to have been hitherto repaired and maintained by the appropriation of the interest of the sum of 10,986*l.* Scots, set apart (of the sums mortified generally for the use of the College) for this express purpose, so far as this would go. The lord-provost, magistrates, and Council regulate and apply the expenditure.

On the Table of the Commission and not Printed.

(1.) Act of Council regarding Chambers for the Regents of the College, 6th December, 1689.

(2.) Representation as to official houses by the Principal and the Professor of Divinity in the University of Edinburgh, 12th October, 1826.

ORDER LVIII*.—To report for what Property the Incorporation of Surgeons pay a feu-duty of 11*s.* odd to the College, as stated in the College Accounts.

Return by the Town-Council.

There is herewith produced the copy of an act of council, of date 21st May, 1656, which fully explains this.

The house in the High School yards, which had been purchased out of Sommerville's mortification for the use of the Professor of Divinity (Curriehill's house) having become ruinous, the same was sold, "with the consent of the masteris and members of the college," to the Incorporation of Surgeons, for 3000 merks Scots, and the act of council above mentioned authorizes the signature of the disposition in their favour, "and ordains Johnne Lauder, thesaurer of the college, to be chairged with the foirsaid soume of three thousand merkis to be imployed in manner above written," (*i. e.* in building a more convenient house within the precincts of the college,) "and with the yeirly dewtie of ten merkis be yeir payable furth theirof in name of fewfarme."

Ten merks Scots is exactly 11*s.* $1\frac{1}{3}$*d.*, the feu-duty appearing in the college accounts as paid by the Incorporation of Surgeons.

The twentie-ane day of May, 1656.

21 May, 1656. Forsameikle as that tenement of land or lodging, lyand within the brugh of Edinburgh in the hie schooll yaird of the same, with housses, biggingis, yairds, and pertinents theirof, acquyred be the counsell of Edinburgh for the tyme, for the use of the colledge, ffra Mr. Samuell Johnstoun of Sheynes, who obteind the same adjudged to him from the aires and successouris of the deceist Sir James Skein of Curriehill, is now become altogether ruinous and defaced, so that it cannot be repaired and re-edified without great chairges and expenses, and that a more convenient hous may be built for the use of the said colledge, within the precinct of the colledge itselff, with als little chairges and expenssis as the reparatioun of the said hous would amount to: in relatioun quhairunto, wpon the 25 of No^{r}. 1655, it wes thoght fitting be the committee of the counsell and masters and members of the colledge, that for the weill of the colledge the said lodging and yaird sould be sold, with all convenient speid, and the pryce thairof to be imployed for building of ane wthir dwelling hous within the said colledge, for the use of the Professor of Divinitie within the same: and wpon the fyften of Januar last, the committee of the counsell, with the masteris and memberis of the same, be their act, thoght fitting, ffor the weill of the said colledge, that the provost, baillies, and counsell, sould be setteris of a pryce

wpon the foirsaid lodging and yaird, if any merchand wer found thairto, the thesaurer of the colledge being made acquaint thairwith: and now sieing Thomas Kincaid, deaken of the chirurgians, and remanent masteris, brethren, and ffriemen of the said incorporatioun, hes settled and agried with the provest, baillies, and counsell, anent the buying of the lodging and yaird for the use of the calling, and hes payit to Johnne Lawder, thesaurer of the said colledge, towards the building of ane new hous for the use of ane Professor of Divinitie thairin, the soume of thrie thowsand merkis Scotts money; the counsell agries to the dispositioun presented to them this day, in the haill heads, articles, and clauses thairof, and ordaines the provest, baillies, dean of gild, thesaurer and thair clerk, in name of the rest of the counsell, to subscryve the same for thair part, with the masters and memberis of the colledge, and utheris consenteris thairto, quhairanent thir presentis sall be a warrand; and ordaines Johnne Lawder, thesaurer of the colledge, to be chairged with the foirsaid soume of thrie thowsand merkis, to be imployed in maner abonewritten, and with the yeirlie dewtie of ten merkis be yeir, payable furth thairof in name of few-farme, in his thesaurer accomptis thairof, and dischairged thairwith when imployed, as said is.

Order LIX.—Were any Funds, at any time, and by what authority, mortified, or in practice employed in the maintenance, repair, and improvement of the Fabric and Buildings of the College of Edinburgh?

Return by the Senatus Academicus

In the early periods of the University, there were various sums mortified for this purpose. The information and documents relative to this subject are in the hands of the patrons.

The area of the old college was of considerable greater extent than that of the new college. When by the Act of 25th Geo. III., the South Bridge was built, the continuation of the South Bridge to Nicolson Street passed through the house of the Professor of Divinity, and the gardens of the said professor and principal, and the gardens on the south of the college, were partly removed to make South College Street. As an indemnity for depriving the college of this valuable property, no money compensation was allotted to the University, or to the individual professors thus deprived of a part of their property, but the surplus proceeds of the projected improvement were directed to be used in erecting buildings to the University, "and to no other use, interest or purpose whatever." Yet by subsequent Acts of Parliament, as will be seen by the summons in the process of multiplepoinding, served upon the Principal, and herewith transmitted, several Acts of Parliament were obtained, by which other objects, not contemplated in the original Act, were preferred to the University; and the magistrates, the guardians of the University, did not secure to it any adequate compensation for the severe sacrifice they made of its valuable property; and it may be mentioned, that the whole buildings between the college and royal infirmary, so hurtful to both, were erected on ground belonging to the University or its professors.

A comparative ground-plan of the old and new college area is preparing.

On the Table of the Commission, and not printed.

Copy Summons of Multiplepoinding at the instance of the South-bridge Trustees against the Magistrates of Edinburgh, for themselves and also as Patrons of the University, and against the Trustees appointed for rebuilding the same.

Presented by the Senatus Academicus.—(See Order LIX*.)

Return by the Town-Council.

Some mortifications were made by private individuals for the maintenance, repair, and improvement of the fabric; but these were found insufficient for the purpose, and in the year 1718, a sum, amounting to 10,986*l.* Scots, was accumulated (of the mortifications for the use of the college generally) and set apart, that the annual return might be applied to this purpose. The interest of this sum would only amount to about 45*l.* 15*s.* 6*d.* sterling, which is altogether insufficient for the purpose.

It is supposed that a sum not less than 500*l.* per annum would be required for repairing, upholding, and maintaining the present building when completed, and that it will soon fall to decay, if some provision is not made for this purpose.

The late Sir James Erskine of Torrie, Baronet, has, by his last will, bequeathed his pictures, bronzes, and marbles, in the house at Torrie, to the college, to be the foundation of a gallery for the encouragement of the fine arts, under the administration of trustees, of which the lord provost is one. A copy of his lordship's report to the council upon this subject, and of the relative papers, are herewith sent, among which is the report of Mr. Playfair, the architect of the college buildings, stating, "That the collection of pictures is of much too great an extent to be placed within the walls of the "new library, and of too great value to be deposited in any apartment that is not lighted from the "roof, and expressly constructed for the purpose of exhibiting it. The bronzes and marbles, although "much inferior to the pictures, both in quantity and quality, might, with great propriety, be distributed "through the same apartment; and this might be erected with peculiar advantage on the ground to "the westward of the college buildings, and holds out an additional inducement, besides the many "that already exist, to purchase the whole of that ground, the acquisition of which I consider to be "highly desirable, and of the most material consequence to the best interests of the college."—(See Order IX.)

Order LIX.*—To produce a state of the affairs of the South-Bridge Trustees, and the discharges taken from the tradesmen to whom payments were made for erecting buildings in the University.

Return by the Town-Council.

There is produced a *printed* report by Claud Russell, esq., accountant, in the process of multiplepoinding, at the instance of the trustees for the South Bridge, dated 12th November, 1817, and containing a full state of the affairs of the South Bridge trustees.

University of Edinburgh.

Appendix. Order LIX*.

In this statement (page 21) under Branch IV., the payments to tradesmen for the buildings in the College, preferred in the multiplepoinding, are stated to be as follows, viz.:—

	£	s.	d.
To Braidwood and Bruce	994	4	11¼
George Welsh	115	17	11
John Berrie	231	17	6¼
David Allan	320	3	8
William Scott	237	12	10
John Baxter	122	16	11¾
E. Balfour	34	12	3½
F. Braidwood	157	15	7
Walter Smiton's heirs	161	1	10
The trustees of John Young	3023	11	5
Robert Thomson's heirs	457	9	4
James Crichton's heirs	532	11	7
Alexander Ponton's heirs	152	1	11
	£6541	14	7

And to instruct the payment of the above sums, there are produced, per inventory, thirteen regular discharges from the individuals to whom the payments were made.

Besides the above, Thomas Chalmers, smith, obtained a decree of preference for 1089*l.* 17*s.* 11*d.*, which has not been paid, in respect Mr. Chalmers is indebted to the trustees in the price of an area in Lothian-street, purchased from them, of nearly the same amount. But, as stated in the conclusion of the accountant's report, page 29, the amount on account of buildings in the University ought to stand thus—

Paid as above	£6541	14	7
To Thomas Chalmers, still due	1089	17	11
	£7631	12	6

ORDER LX.—Are such funds so employed at the present time, and by what authority, and by whom is the expenditure of the same authorized, regulated, and applied? and, if not so employed, to what purposes, and by what authority, have such funds been diverted?

Return by the Town-Council.

The accounts which have been produced in compliance with the previous requisitions, will show, that the whole of this fund has been employed annually, under the authority of the lord provost, magistrates, and council of Edinburgh, who authorize, regulate, and apply the expenditure; and that the funds have not been diverted or employed for other purposes.

ORDER LX.*—A Return of the Number of Lecture-Rooms in the College of Edinburgh; of the Hours daily during which each Room is occupied; and of the Number of Students each Room is calculated to contain.

Return by Mr. Playfair, architect.

Number of Class-rooms.	Each calculated to contain.	Hours when occupied.
1. Latin,	306	From 8 to 3.
2. Greek,	266	From 8 to 3.
3. Mathematics,	144	From 9 to 1.
4. Logic,	266	From 1 to 2.
Clinical Medicine		From 4 to 5.
5. Moral Philosophy	244	From 12 to 1.
Conveyancing		From 2 to 3.
Clinical Surgery,		From 5 to 6.
6. Natural Philosophy,	256	From 11 to 12.
7. Rhetoric,	93	From 12 to 1.
Agriculture,		From 3 to 4.
8. Natural History,	142	From 2 to 3.
9. Divinity,	260	From 11 till ½ past 12.
10. Oriental Languages,	100	From 10 to 11.
Church History,		From 1 to 2.
Universal History,		From 3 to 4.
11. Civil Law	93	From 2 to 4.
Public Law,		No Lecture.
12. Practice of Physic,	318	From 9 to 10.
Scots Law,		From 3 to 4.
13. Materia Medica,	268	From 8 to 9.
14. Chemistry,	551	From 10 to 11.
15. Theory of Physic,	137	From 11 to 12.
16. Anatomy and Surgery,	311	From 1 to 2, and 4 to 5.
17. Midwifery,	150	From 3 to 4.
Medical Jurisprudence,		From 1 to 2.
18. Military Surgery,	120	From 2 to 3.

(Signed) W. H. PLAYFAIR.

College of Edinburgh,
10th July, 1827.

Order LX**.—A Return of the Expense of completing the College Buildings.

University of Edinburgh.

Appendix. Order LX**.

Return by the College Building Commissioners.

General Meeting, City Chambers, 21*st October*, 1828.

PRESENT,

The Right Hon. the Lord Provost,	The Very Rev. Principal Baird,
Mr. Sheriff Duff,	Dr. Duncan,
William Child, Esq., 1st Bailie,	Robert Johnston, Esq.

There was laid before the Meeting, a letter addressed to the Lord Provost, from the Secretary of the University Commissioners, of the following tenor:—

"29, *Queen-Street Edinburgh*, *October* 8, 1828. 8 October, 1828.

"My Lord,—I am directed by the University Commissioners to state, that the Memorial of the "Commissioners for rebuilding the College of Edinburgh, in regard to a grant of public money, was "this day presented at a meeting of their Board, being the first meeting since the receipt of the Me- "morial; and I am to request that your Lordship will have the goodness to give the necessary direc- "tions for preparing and transmitting a statement, containing shortly, and in detail, the objects and "expense of each of the operations respectively contemplated by the College Building Commissioners, "which they consider will be required for finishing the University Buildings. I have the honour to "be, &c.

"*To the Right Honourable* (Signed) "James Aitken, *Sec.*
"*The Lord Provost of Edinburgh.*"

Which his Lordship had transmitted to the Standing Committee of the Commissioners to answer, and his Lordship now laid on the table the following letter from them in answer:—

"*Edinburgh*, 20*th October*, 1828.

"My Lord,—As your Lordship has sent to us the letter of the 8th instant from Mr. Aitken, 20 October, 1828.
"Secretary to the Commissioners for the Visitation of the Universities, which requests a statement, "containing shortly, and in detail, the objects and the expenses of each of the operations respec- "tively contemplated by the College Building Commissioners, which they consider will be required "for finishing the University Buildings, we beg leave to submit the following statement:—

"It will not be necessary on this occasion to enter into a long detail of the several objects con- "templated by the Building Commissioners, because the memorials and statements formerly trans- "mitted to the Lords of the Treasury, and laid before Parliament, explain these matters. What is now "to be offered is a brief abstract of what is still required to be executed.

"The first object is the completion of that part of the buildings already contracted for, and in "progress of execution, being the Library, the Graduation Hall, and the Divinity Hall. The sum "still to be paid to these existing contracts is 1164*l.* 12*s.* 11½*d.*; and to meet this expenditure the "Commissioners have in the Bank 3669*l.* 3*s.* 3*d.*; thus leaving at their disposal 2504*l.* 10*s.* 5¾*d.*

"The second object is the completion of those parts of the building which are not yet contracted "for, but which will require to be done, and which will cost the sum of 18,745*l.* 12*s.*, to account "of which the Commissioners have in hand 2504*l.* 10*s.* 5¾*d.*,—for the particulars of all which, see "Appendix No. 1.

"The third object is the acquisition of the properties lying to the westward of the College, occupied "at present by the Trades' Maiden Hospital as a private Chapel.

"The possession of these properties will materially add to the safety and usefulness of the Museum "of Natural History and Anatomy, by securing an open space, with free air and light; as otherwise, "if it went into the hands of builders or tradesmen, it would be covered with lofty buildings, houses, "and workshops, within sixteen feet of the Buildings, obstructing the light, and exposing the Col- "lege to danger from fire.

"Fourth object. It would be desirable to shift North College Street farther off, by taking a new "line more to the north from the College, so as to prevent or lessen the noise of carriages passing that "way, which is injurious to the lecturing-rooms. The Building Commissioners have already some "property in that line, but several lots of houses would require to be purchased.

"In framing the late Act of Parliament for the improvement of the City of Edinburgh, this object "arrested the attention of all the various public bodies concerned in accomplishing the separate objects "of this measure. A street was projected, connecting South Bridge-street at Adam's-square with "the new South Bridge near Merchant-street, thus leaving an area before the north front of the "College of at least seventy feet clear, for planting, which it was thought, besides proving a great "ornament to the ancient part of the City of Edinburgh, would secure to the College a valuable se- "clusion from noise. Authority was accordingly taken in the Act for accomplishing this object, and "a copy of the clauses accompany this.

"The fifth object refers to a subject on which the Building Committee have not ventured to offer "an opinion, although they are aware of its great importance, and as such have had it under their "consideration; they, however, submit the matter to the Royal Visitors as a subject for them to con- "sider and earnestly beg to call their attention to it.

"The subject now alluded to, is to obtain a fund, and make due provision for upholding this "national structure, which has been erected at a great expense, and will require money annually to "keep it in repair.

"If a Parliamentary grant were made for this purpose, it would require to be put under a Com- "mission of Management, subject to the control of Government.

"These are the chief points which have been contemplated by the Building Commissioners, as "necessary for the completion and preservation of the College of Edinburgh; and the Standing "Committee request your Lordship to communicate this statement to the Royal Visitation Com- "missioners.

"We have the honour to be, &c. (Signed) "J. Clerk Rattray,
"Ro. Johnston,
"*The Right Hon. the Lord Provost.*" "Andw. Duncan."

(I.) Statement regarding Expenditure upon the College Buildings, pointing out the Expense of the various particulars still required to be done, but not yet contracted for.

1. Work still to be contracted for, in order to complete the Library and Graduation Hall Department:—

To Furniture	£1150	3	4
Painting	1500	0	0
Doors of the book-cases in the Upper Library, including trellis work	1100	0	0
Heating apparatus	300	0	0
Railing for the gallery of the Upper Library	200	0	0
Railing of the great staircase	125	0	0
Brass finishings for doors	100	0	0
Railing of the Graduation Hall	40	0	0
	£4515	3	4

2. Work still to be contracted for, in order to complete the other parts of the building:—

To Steps round the Court, and lowering of ditto	£3286	0	0
Dome	4758	8	8
Clock and clock bell	300	0	0
Anatomical department	500	0	0
Supply of water	60	0	0
Fitting up Divinity Library	500	0	0
Iron gates and railing round the exterior of th building	600	0	0
Gratings of small sunk areas	50	0	0
Lamps	50	0	0
Gas fittings	300	0	0
Fitting up necessaries for the students	500	0	0
	£10,904	8	8

3. Expenses not under contracts:—

To the claim of the Royal Society	£225	0	0
Expenses of management	1560	0	0
Allowance of 10 per cent. on estimate	1541	0	0
	£3326	0	0

Abstract made up in connexion with the foregoing statement:—

To existing contracts	£1164	12	11½
Contracts still to be entered into for Library Department	4515	3	4
Contracts still to be entered into for the other parts of the building	10,904	8	8
Expenses not under Contract	3326	0	0
	£19,910	4	11½
To money in hand	3,669	3	3
Money required	£16,241	1	8½

(Signed) W. H. PLAYFAIR.

(II.)—Clauses of Edinburgh Improvement Act, above referred to.

And whereas the removing of certain buildings adjacent or contiguous to the College of Edinburgh, and the opening up of a street from Adam-square in the said city, on the north of the College, to Brown-square, would tend materially to improve the said College, not only by obtaining better ventilation and light, and greater security from accidents by fire, but by removing the noise occasioned by wheel carriages, and it would otherwise be of great public importance to widen the said street as aforementioned; be it enacted, That it shall and may be lawful for the Commissioners under this Act, and they are hereby authorized and empowered to contract and agree with the Commissioners appointed to superintend the building and improvement of the said College, for removing the buildings adjacent or contiguous thereto, and for opening a street from Adam-square on the north side of the said College to Brown-square: Provided always, That no part of the moneys to be assessed and raised under this Act shall be applied to this purpose; and it shall and may be lawful for the Commissioners under this Act, and they are hereby authorized and required to continue the said street from Brown-square till it join the communication from the Lawn Market to the south, hereby authorized to be made, in such manner, and according to such plan or plans as shall be fixed and determined upon by the said Commissioners; and for these purposes, it shall and may be lawful for the said respective Commissioners to treat, contract, and agree with the several owners, occupiers, liferenters, lessees, and all others interested, whose names are specified in the schedules hereunto annexed, for the purchase of

847

University of Edinburgh.

Appendix. Order LX**.

such lands, areas, houses, and other heritages as may be required by the said Commissioners for the several last-mentioned purposes, within five years after the passing of this Act; and in the event of the parties not coming to an agreement regarding such purchases, the matter shall be settled and determined by a jury, in like manner as is hereinbefore provided for in the case of other property to be purchased and taken under the authority of this Act.

Provided always, and be it further enacted, That it shall not be lawful to remove the Trades' Maiden Hospital, or to take possession of any part of the areas therewith occupied, without providing another building of equal accommodation with the present, for the purposes of the charity under the charge of the Governors of the said hospital, with areas annexed thereto, of at least equal value and measurement with those annexed to the present hospital, or without impresting in the hands of the Governors thereof, such a sum of money as shall be sufficient to purchase such an area in the immediate vicinity of Edinburgh, and to erect a building proper for the purposes of the said charity, containing accommodation at least equal to that contained in the present building; and in case of difference of opinion, either as to the situation of the intended buildings, or the dimensions and accommodations of the building itself, or areas to be occupied therewith, or as to the amount of the money to be imprested as above provided for, the same shall be determined by two of the said College Commissioners, the Deacon Convener of the Incorporated Trades, and the first Trades' Councillor of the said City of Edinburgh, all for the time being; and in case of variance between the said referees, then by an oversman to be named by them.

ORDER LXI.—Is there any Museum, or are there any instruments, or apparatus for philosophical experiments, or collections of specimens, or of preparations belonging to the College of Edinburgh, or any of the classes thereof? From what fund have the same been purchased and kept in repair, and under whose management are the same and the said funds?

Return by the Senatus Academicus.

(I.) The University contains the following collections, all of which are used in the classes to which they belong:—

1. Museum of Natural History.
2. Collections of Instruments and Apparatus for Philosophical Experiments.
3. Anatomical Museum.
4. Chemical Apparatus.
5. Collection of Materia Medica.
6. An Herbarium.
7. A Collection connected with Midwifery.
8. Surgical Instruments referred to by the Professor of Military Surgery.
9. The Torrie Collection of Pictures, Marbles, and Bronzes.

(II.) COLLECTIONS belonging to UNIVERSITY.

(1.) History of the Museum, from the Year 1804 to 1826.

1804—1826.

On my appointment to the chair of natural history in this university, in the year 1804, the museum was so inconsiderable, that the whole of the articles were contained in a few cases. The specimens were of birds, serpents, minerals, and dresses and weapons of savage nations. The birds were in so decayed a state, that I was forced very soon to throw them out, and thus the original collection was reduced to a few glasses of serpents, a small collection of minerals, and the arms and dresses already mentioned*. I placed my own collection in the museum, and continued collecting in all ways as far as my influence, and the funds in my possession, would admit of, from 1804 to 1819. I even found the accommodation too small, and therefore applied to the Town Council for further accommodation. This was granted to me, and a very spacious and handsome museum was fitted up for the reception of the articles of natural history. During this period the museum was also materially enriched by the addition of a collection of minerals and books (the latter of which have since been placed in the college library), left to the university by the late Dr. Thompson of Palermo, and by the collection of minerals of the late celebrated Dr. Hutton of Edinburgh. In the year 1807, on my suggestion, an application was made to the King for his Majesty's permission to have circulated from the different public offices, printed instructions for collecting objects of natural history for the museum. This request was graciously granted, and these instructions were speedily widely circulated, and have proved most beneficial to the museum. The collections towards the close of this period had increased so much, that I was forced, as before the fitting up of the *second museum* by the Town Council, to pack up the articles of natural history, and stow them away in cellars and garrets, every case being literally crammed with specimens. It was now necessary to look out for another museum, and fortunately the buildings in the new college, intended for the natural history department, were in progress. I stated to the Commissioners for the College Buildings my wants, and the certainty of the destruction of many of the specimens, if kept much longer packed up in the manner already mentioned. The Commissioners being convinced of the urgency of my demands, gave orders for the speedy finishing of the splendid halls and galleries of the *new museum*. During the fitting up of this museum, an interesting and valuable collection of objects of natural history, the property of Mons. Dufresne, assistant in the Garden of Plants in Paris, was offered for sale. This collection was carefully examined by agents, sent by the college to Paris, and being found fully worth the sum demanded for it, was purchased by the professors, for the museum. About the same time a good many valuable articles of natural history were purchased by order of the professors, at the sale of the cabinet of the late Mr. Bullock. These collections and those contained in the first and second museums, were brought together and arranged in the museum in the new college, in the year 1820. Since that time the museum has increased more than at any former period, so that the collection is nearly double what it was in 1820. About a year ago, I again stated to the Commissioners for College Buildings, that further accommodation for objects of natural history was wanted, the cases in the new museum being completely filled. The Commissioners, with their usual liberality and activity, after considering my proposal, ordered a suite of rooms, five in num-

University of Edinburgh.

Appendix. Order LXI.

1804—1826.

ber, to be immediately fitted up. This beautiful series of rooms, at the time this Report is writing, is nearly filled up with beautiful and interesting objects of natural history. The museum is rapidly increasing, and will, ere many years pass, equal in extent and splendour some of the most distinguished museums in other parts of the world. In order, however, to enable me to realize these hopes, another series of rooms must be provided. The Commissioners for College Buildings, to whom I have again applied, are now considering of the propriety of erecting another gallery of natural history, on the ground to the westward of the present museum.

History of the Funds of the Museum from the Year 1804 to 1826.

At the period of my appointment to the chair of natural history, that is, in 1804, there was no regular allowance for the maintenance and increase of the museum, and the only resources I had to look to, were occasional assistance from the Town-Council and my own private funds. From the year 1804 to the year 1812, the expenses of the museum for collecting, securing, and preserving objects of natural history, for servants, and other necessary expenses, were paid partly by the Town-Council and partly by the Professor of Natural History. I kept no regular or satisfactory records of the sums I paid out of my own funds; but those furnished by the Town-Council are recorded in the accompanying document. The increasing expenditure of the museum, and the want of regular funds, induced me, in the year 1812, to lay a statement on this subject before the Honourable the Barons of his Majesty's Exchequer for Scotland.

The result of this application was a gracious order from his Majesty, that 100*l.* should be paid annually to the Professor of Natural History for the use of the museum. From the year 1812 to the year 1820, when the museum was for the first time opened to the public, the museum funds were,—the annual Royal Grant of 100*l.*, occasional allowances from the Town-Council, and my own funds. In the year 1820, the debt on the museum having accumulated considerably, and being further increased by the annual payment of the interest of 3000*l.*, borrowed by the professors from the banks, for the payment of the Dufresne and Bullock Collections, it was found necessary to make some arrangements to meet these difficulties. At a meeting held in the museum, attended by representatives from the Court of Exchequer, the Court of Session, the University, and the Town-Council, I was ordered to open the museum to the public, and to see that each visitor paid 2*s.* 6*d.* of admission money. This sum was fixed by the meeting, after having reports from keepers of museums practically acquainted with the subject, and who were unanimously of opinion, that in the circumstances of the case, the sum above mentioned was that most likely to produce the most profitable return. From the year 1820 to the present month of 1826, the museum has been supported by the money collected from visitors, the Royal annual grant of 100*l.*, and advances by the Professor of Natural History; the Town-Council, from the period of opening of the museum to the public, having considered it unnecessary to grant any further pecuniary aid to the museum establishment.

From the statement now given, it appears that the museum is mainly supported by the contributions of visitors,—a fund which, in the nature of things, must yearly decrease.

Although this fund has been productive, still it is not sufficient, even in its present state and when aided by the Royal annual grant, to keep the establishment free of debt. This being the case, it is evident that some certain and permanent income must be provided, in order to secure the museum already formed, and to afford the means of preserving and of purchasing such specimens as are absolutely required, in order to keep the museum up with the progress of natural science.

(2.) Natural Philosophy.

This class now possesses an ample museum, or an extensive, choice, and elegant collection, and illustrative apparatus, formed chiefly by the present professor, of which the Town-Council has furnished yet only a small part of the expense. Nor have the College Commission definitively granted sufficient space and accommodation.

(3.) Anatomical Museum.

There is a museum of anatomical preparations belonging to the university, the greater part of which was bequeathed by Dr. Monro, *secundus*, to the university, and the following are the terms of his bequest:—

"I, Alexander Monro senior, Physician, and Professor of Medicine, Anatomy, and Surgery in the University of Edinburgh, hereby give and bequeath to the said University for ever, my whole collection of Anatomical Preparations, with all the vessels and cabinets in which they are at present contained, in the several rooms connected with the anatomical theatre; to be used by myself and eldest son, my colleague, during our lives, and after our decease by our future successors in office, for the purpose of demonstrating and explaining to the students of this university, the structure, physiology, and diseases of the human body."

Several important additions have been made to the museum. During 20 years after the above donation, the museum was supported entirely at the expense of the professor, with the exception of 12 gallons of whisky, which were annually given by the city. About two years ago, the patrons granted a supply of bottles for the use of this museum, and they have continued to do so, so that the museum in a short time will be put into a complete state of repair.

A negotiation has just been concluded with the patrons of the university, in regard to the museum, by which they have agreed to defray the expense of putting it into a complete state of repair, and of making out and printing a catalogue, and also to put at the disposal of the professor 100*l.* annually for its support. At the same time it was agreed by a joint resolution of the Senatus Academicus and the patrons of the university, that 1*l.* 1*s.* be required from each candidate for graduation, for the support of the Anatomical Museum, it being at the same time understood, that if he pays this money at his first matriculation at the university, he shall be entitled to a free entrance to the museum during the whole course of his studies;—that no other student shall be compelled to contribute to the museum, but that tickets of admission shall be issued to all who wish for them at 7*s.* for the season, and that none but students of Dr. Monro's class shall be admitted to the museum without such tickets. It has also been stipulated, that the museum shall be open three days in the week, for two hours each day, during the whole session of college, and that the professor's private collection shall be exhibited along with it, and that it is to be inspected twice a-year by a joint committee of the Patrons and Senatus Acade-

849

University of Edinburgh.

Appendix. Order LXI.

micus. These arrangements are to subsist for six years, and may then be renewed or discontinued, as experience may shew their advantages or disadvantages.

(4.) Chemistry.

All the apparatus, preparations, and minerals, are provided at the expense of the Professor, and are his private property.

(5.) Materia Medica.

The Professor of Materia Medica has a considerable collection of pharmaceutical apparatus, a very valuable and extensive collection of Materia Medica and Alimentaria, collected entirely by himself. He is indebted to the liberality of the Commissioners for completing the college buildings, for the standing furniture of a good laboratory, glass-cases, and presses, tables, and drawers for a suitable museum.

The only fund for defraying the expense of purchasing and renewing apparatus, glass bowls, tin boxes, materials, and specimens, is the fee of 2*s*. 6*d*. from each student above the 2*s*. drawn by his predecessor, who had none of these expenses, and it is under the management of the professor alone.

(6.) Botany.

A Herbarium scarcely exists at this university. A considerable quantity of dried plants have been collected, but they are generally without arrangement, and of little value. Efforts have been for some time making to supply this defect; and a room has been fitted up for the purpose. The library fund is the only one out of which the expense can be defrayed.

(7.) Midwifery.

There is a museum or collection of preparations and apparatus attached to, and used in teaching the Midwifery class, which has been collected at the sole expense of the professor, and is his private property.

(8.) Military Surgery.

There is a small collection of surgical apparatus, instruments, models of machines for transporting sick and wounded, &c., provided for the instruction of the students of Military Surgery, and this at the sole expense of the professor. No collection of morbid preparations has yet been formed, the professor, as a Fellow of the Royal College of Surgeons, having access, along with his pupils, to a very valuable collection illustrative of his department in the museum belonging to that body; and, by a recent arrangement, he will also have access to the valuable collection of anatomical preparations in the university.

(9.) Torrie Collection of Pictures, Bronzes, and Marbles.

It has been intimated, 10th September, 1825, to the Senatus Academicus, by desire of Sir John D. Erskine of Torrie, that by the last will and testament of his brother Sir James, that at his (Sir John's) death, he makes over to the College of Edinburgh, to be entailed upon it, all his pictures, bronzes, and marbles in the house of Torrie, which he bequeaths for the purpose of laying a foundation for a gallery for the encouragement of the Fine Arts; and for the better security of this, he nominates and appoints his next heir of entail, and the succeeding heirs of entail to the estate of Torrie, the Chancellor of the college, the Sheriff of the county, and the Provost of Edinburgh, to be the trustees.

Order LXI*.—A Return of all the Sums, the Patrons of the University have given for the Instruments or other Philosophical Apparatus of the respective Classes in the said University, and the Dates at which such Sums were given during the last fifty years.

Return by the Town Council.

In compliance with the above requisition, the Lord Provost begs herewith to transmit—

A return by the City's Accountant of all the sums the Patrons of the University of Edinburgh have given for the instruments or other philosophical apparatus of the respective classes in said University, and of the dates at which such sums were given during the last fifty years, as detailed in the College revenue accounts, from Martinmas 1775 to 3rd October 1825, wherein the amount for the Natural Philosophy class is at that date 824*l*. 5*s*. 11*d*., and for the Mathematical class 233*l*. 1*s*. $1\frac{8}{12}d$. But the Honourable Commissioners are requested to notice, that the former has, since that date, been augmented by 200*l*., authorized to be paid Professor Leslie, per act of Council 11th of October, 1826, No. 39 of the return to the next requisition.

Return of all the sums the Patrons of the University of Edinburgh, have given for the instruments or other philosophical apparatus of the respective classes in said University, and of the dates at which such sums were given, during the last fifty years, as detailed in the College revenue accounts, from Martinmas, 1775, to 3rd October, 1825.

Order LXI,**—A Return of all the Petitions, or Applications, for Instruments, or Philosophical Apparatus, from any of the Professors to the Town-Council, and of the Deliverance thereon, during the same Period.

Return by the Town Council.

In compliance with this Requisition, the Lord Provost begs to transmit herewith the following papers:— 28 October, 1826.

1. Copy act of Council dated 16th April, 1777, regarding purchasing apparatus for the Natural Philosophy class.

2. Copy act of Council dated 30th April, 1777, agreeing to give Professor Robison 300*l*, to purchase Philosophical Apparatus for the Natural Philosophy class.

3. Act of Council dated 19th September, 1779, authorizing the Chamberlain to pay John Miller's account for an Air Pump for the use of the Natural Philosophy class.

4. Copy act of Council dated 11th December, 1782, authorizing the Chamberlain to pay John Miller 30*l*. for Instruments, for the Natural Philosophy class.

5. Copy act of Council dated 5th August, 1789, authorizing the payment to Professor Robison of 184*l*. 3*s*. 11*d*., and to John Miller 51*l*. 3*s*. 6*d*. for Instruments for Natural Philosophy class.

6. Copy act of Council dated 16th December, 1789, authorizing a sum of 109*l*. 11*s*. 11*d*. to be paid to Professor Robison, as interest on sum expended by him for Apparatus for Natural Philosophy class, and containing certain instructions regarding the perservation of the Apparatus.

7. Copy act of Council dated 13th January, 1790, authorizing payment of certain other sums to Professor Robison, in addition to the sums in the last-mentioned act.

8. Copy act of Council dated 13th November, 1793, authorizing payment of an account for 10*l*. 10*s*. to Mr. John Miller, being for Philosophical Apparatus.

University of Edinburgh.

Appendix. Order LXI**.

28 October, 1826.

9. Copy act of Council dated 16th October, authorizing the Chamberlain to pay Professor Robison 50*l.* to purchase Instruments.

10 Copy act of Council dated 20th November, 1805, authorizing the payment of 100*l.* to Professor Leslie, for furnishings to the Mathematical class.

11. Copy act of Council dated 23rd April, 1806, authorizing payment of 50*l.*, mentioned in the act No. 9, to be paid to Professor Playfair.

12. Copy act of Council dated 2nd September, 1807, authorizing the payment to Professor Playfair of 90*l.*, to purchase Apparatus for Natural Philosophy class.

13. Copy act of Council dated 9th Sepetember, 1812, refusing application of Professor Leslie for 100*l.*

14. Copy act of Council dated 8th September, 1813, authorizing payment of 43*l.* for Philosophical Instruments for Natural Philosophy class.

15. Copy act of Council dated 20th April, 1814, again refusing Professor Leslie's demand for 100*l.*

16. Copy Representation by Bailie Scott regarding Mathematical class, dated 2nd December, 1814.

17. Copy Letter Professor Leslie to Bailie Scott, dated 2nd December, 1814.

18. Copy act of Council dated 4th December, 1816, refusing to lay out any money on Apparatus for Natural Philosophy class.

19. Copy act of Council dated 7th December, 1814, authorizing payment to Mr. John Innes of 28*l.* 7*s.* for Philosophical Apparatus.

20. Copy act of Council dated 21st December, 1814, authorizing payment of 100*l.* for Apparatus for Mathematical class.

21. Copy act of Council dated 3rd June, 1818, authorizing payment to Professor Leslie of 40*l.*

22. Copy Letter from Professor Leslie to the Lord Provost, dated 6th December, 1819.

23. Copy Minute of Council dated 19th January, 1820, granting 100*l.* for Apparatus for Professor Leslie's class.

24. Copy act of Council dated 1st March, 1820, authorizing payment of 40*l.* for Apparatus to Philosophical class.

25. Copy Letter to Professor Wallace, dated 10th May, 1821.

26. Copy Letter from Professor Leslie to the Lord Provost, dated 12th April, 1824.

27. Copy Letter from Professor Leslie to Bailie Allan, dated 15th June, 1824.

28. Copy Letter from Professor Leslie to Bailie Allan, dated 18th June, 1824.

29. Copy Letter from Professor Leslie to the Lord Provost, dated 12th July, 1824.

30. Copy Minute of Council dated 16th July, 1824, regarding Natural Philosophy class Apparatus.

31. Copy Letter from Professor Leslie to the Lord Provost, dated 25th March, 1825.

32. Copy Letter from Professor Leslie to the Lord Provost, dated 24th December, 1825.

33. Minute of Council dated 4th January, 1826, regarding the Natural Philosophy class Apparatus.

34. Minute of Council dated 11th April, 1826, granting 100*l.* to Professor Leslie for Apparatus.

35. Copy Letter from Professor Leslie to the Lord Provost, dated 19th July, 1826.

36. Copy Minute of Council dated 30th August, 1826, authorizing payment to the College Committee of 200*l.*, to purchase Apparatus for Natural Philosophical class.

37. Copy Letter from Mr. Beatson, keeper of the Council Records, to Professor Leslie, dated 31st August, 1826.

38. Copy Letter from Professor Leslie to the College Committee, dated 5th September, 1829.

39. Extract from the Council Records, containing a Report by the College Committee on the Natural Philosophy Class Apparatus, and the Decision of the Council thereon, authorizing the Chamberlain to pay Professor Leslie 200*l.* sterling, dated 11th October, 1826.

(Signed) CARLILE BELL, *Conj*^{t}. *Clk.*

Edinburgh, 28th October, 1826.

ORDER LXI***.—Return by the Senatus Academicus *continued.*

Report of the Revenue and Expenditure of the Anatomical Museum belonging to the University of Edinburgh, by Dr. Alexander Monro. (See p. 168.)

In answer to the query relative to the expenditure and revenue of the Anatomical Museum, I beg leave to state, for the information of the Honourable Members of the Royal Commission, that that museum has been supported in part from the funds of the city, but chiefly from my own.

I have requested the favour of Mr. Bonar, who is at present college bailie, to obtain for me an extract from the Records of the city, as to the amount of the sums of money which have been expended upon the Anatomical Museum, for the purchase of spirits, &c., but I have not yet received the return.

I regret much that it is not in my power to give a distinct statement of the money I have expended on the Anatomical Museum belonging to the University, from having kept no account of it.

I may remark that it was considerable, as for the long period of twenty years the Museum, consisting of several thousand specimens, was supported chiefly at my expense.

With regard to the history of the salary of the conservator of the Anatomical Museum of the University, it may be remarked that Messrs. Crotchart, Innes, and Fyfe, who were assistants of my father, and successively filled that office, were appointed upper janitors to the college by the Patrons of the University.

In the year 1801, Mr. Fyfe received from the funds of the city the sum of 15 guineas; and, in 1807, his salary was augmented 30*l.* per annum, from the same source, in addition to his salary as upper janitor.

I have not been able to ascertain the amount of the salary of the upper janitor, as it was derived from a small fee drawn from each student.

In the year 1812, the office of upper janitor was abolished by a joint resolution of the Honourable Patrons and Senatus Academicus; and in its stead Mr. Fyfe received 115*l.* annually from the matriculation fund, or in all 145*l.*, independently of a free house in the college.

In Mr. Innes's letter of resignation, which is recorded in Mr. Fyfe's commission, dated January, 1777, it is stated, as the cause of his resigning the office of janitor, "that a bad state of health prevents me from properly discharging my office of upper janitor to the University, and dissector to the Professor of Anatomy;" thus the one situation was considered as conjoined with the other; and it may be added, that Mr. Innes urges, as the ground of Mr. Fyfe's nomination to the upper janitorship, in conjunction with himself, that he, Mr. Fyfe, would undertake the burden of the dissectorship.

University of Edinburgh.

Appendix. Order LXI***.

The same view of the subject is taken by the Senatus Academicus; for in a Report drawn up by them, dated the 18th November, 1812, and approved of by the council, it is stated, that Mr. Innes and Mr. Fyfe, who have been pro-sectors to the Professor of Anatomy, seem to have received the office (viz. of janitor) as a mere sinecure.

Mr. Mackenzie, my present assistant, was appointed by the Honourable Patrons successor to Mr. Fyfe, as conservator to the Anatomical Museum in the summer of 1824, but with a salary of only 30*l.* a-year, and he has no house in the college.

He has lately informed me, that from the period of his election up to Lammas last, he has received 69*l.* 0*s.* 9*d.* as salary, independently of 50 guineas as a gratuity for his exertions in repairing and adding to the preparations in the Anatomical Museum.

Within these few weeks, a negotiation respecting the Anatomical Museum belonging to the University has been concluded, by which the Patrons of the University agreed to defray the expense of putting it into a complete state of repair, of making out and printing a catalogue, and also to put at my disposal 100*l.* annually for its support. At the same time it was agreed, by a joint resolution of the Senatus Academicus and the Patrons of the University, that 1*l.* 1*s.* be required from each candidate for graduation, for the support of the Anatomical Museum,—it being at the same time understood, that if he pay this money at his first matriculation at the University, he shall be entitled to a free entrance to the Museum during the whole course of his studies; that no other student shall be compelled to contribute to the Museum, but that tickets of admission shall be issued to all who wish for them at 7*s.* for the season, and that none but students of Dr. Monro's class shall be admitted to the Museum without such tickets. It has also been stipulated that the Museum shall be open three days in the week, for two hours each day, during the whole session of college, and that my private collection shall be exhibited along with it, and that it is to be inspected twice a-year by a joint committee of the Patrons and Senatus Academicus.

These arrangements are to subsist for six years, and may then be renewed or discontinued, as experience may show their advantages or disadvantages.

Before concluding, I trust that I may be permitted to add, that I consider the sum granted for the support of the Anatomical Museum to be inadequate for the purpose. It appears to me that only about 80*l.* will be got annually from the students, to which is to be added the 100*l.* from the funds of the city; which 180*l.* is to defray the salary of a conservator, that of an experienced assistant, a door-keeper, and for the purchase of spirits, bottles, &c.

With regard to the conservator's salary, it may be observed, thut it will absorb the greater part of the sum. From what has been already stated in this paper, it appears that Mr. Fyfe had 145*l.* a-year, besides a house, and when the Museum was by no means so extensive, and was not kept in the same high order as it must be when exhibited to the public, and when the conservator was not obliged to give up a considerable share of his time to the students, and other visitants to the Museum, for the purpose of explaining the nature of its contents. Besides, the conservator must be a person who has received a complete medical education, and who, if not suitably rewarded, will betake himself to the more lucrative branch—the practice of surgery.

I may state also, that it is the wish of my colleagues to extend the Museum very considerably, which would add much to its utility to the students, and which is now absolutely necessary, when such great exertions are making to form extensive musea in other seminaries of medical education.

My colleagues are also very desirous that a distinguished artist should be employed to make drawings of the more remarkable specimens of organic structure, the peculiar characteristic features of which cannot be preserved by any other means.

In short, I should fondly hope that the members of the Royal Commission may deem it expedient to recommend, that an additional sum should be granted for the support and extension of the Anatomical Museum belonging to the University.

Proceedings of Town Council as to Anatomical Museum.

Edinburgh, 25*th June*, 1824.

25 June 1824.

The College Committee beg leave to report, that they proceeded to the consideration of what regulations should be laid down for the new conservator; but that the subject of the collection is one of so much importance in itself, and the framing of proper regulations for its preservation and increase is attended with so many difficulties, from the peculiar circumstances in which it is at present placed, that the Committee think it right to report to the magistrates and council fully the opinions they have formed with regard to it.

It appears to them that it would be of immense importance to the interests of the University, as well as of medical science.—

1st, That there should belong to the University, a large and varied collection of preparations, illustrative of the sound and deceased structure of the different parts of the human body;

2nd, That such collection should not be restricted to the use of particular professors, and of the students attending their classes, but, so far as is consistent with the safety of the preparations, that they should be for the use of all the medical and surgical professors of the University, who might wish to employ them for the benefit of themselves and of their students;—and,

3rd, That at stated times, and under proper regulations, the collection should be open to the medical profession in general.

Were there an Anatomical and Pathological Museum in the University, placed under such regulations, the Committee have no doubt but it would meet with support, not only from the medical professors, but also from the members of the medical profession in general, who would be inclined to take an interest in it, if they found that it was to be made extensively useful for the advancement of medical science. A great object would be gained, too, by the collection being open to the profession, as this would be a security for its being kept in good order, and for the different articles being properly preserved.

The object pointed out seems so extremely desirable, that it is well worthy of consideration, whether it can be at present attained, or whether the difficulties which come in the way are insurmountable.

The first difficulty that occurs to the Committee, is the expense that must necessarily be incurred in the increase of the present Museum, or in the formation of a new one. Although, in the opinion of the Committee, funds amply sufficient for the proper preservation of the public Museum be at present afforded from the funds of the city, yet it is evident that a considerably larger sum will be annually

University of Edinburgh.

Appendix. Order LXI***.

25 June, 1824.

required for the purchase of bottles, &c. &c., if it be intended to increase the size of the collection. But for the attainment of an object of so much importance to the public, to the University, and to the medical profession, the Committee cannot doubt that funds amply sufficient might be obtained.

The principal difficulty in making proper arrangements for the formation of a museum for the purposes above stated, seems to the Committee to arise from the circumstance, of there being already within the walls of the college *three distinct collections*, all of them placed under restrictions, and each of them under peculiar regulations. There is—1st, The collection of the present Professor of Anatomy and Surgery, which being his own private property, can be used only by himself, and for such purposes as he pleases, and can be at any time removed from the University altogether;—2ndly, There is the collection gifted to the University by the late Dr. Munro. The council are probably aware that the present Dr. Munro was appointed, in the year 1798, Conjunct-Professor of Anatomy and Surgery with his father, and that in the year 1800, the late Dr. Munro made over to the University a large collection of anatomical and pathological preparations, which had been formed by his father, Dr. Munro *primus* and himself, and at their own expense; the terms of the deed of gift are as follows:—(see p. 168.)

* * * * * * * * * *

Previously to this time there does not appear, so far as the Committee can learn, to have been any considerable collection of such preparations belonging to the University; and since the deed of gift, the collection has been preserved at the expense of the town. This collection is so restricted in its use, by the terms of the deed of gift, that it appears to the Committee that it can be employed only by the Professor of Anatomy for the purpose of demonstration to the students of his own class, unless with his special consent; nor, without that, can it be thrown open to the members of the medical profession. And, 3rdly, There is a small collection of pathological preparations which have been sent to the University, principally by the medical officers of the Royal Infirmary. Hitherto the Committee have not been able to ascertain in whom the property of this collection is vested, nor under what particular regulations it is placed. This was considered, by the Committee appointed to examine into the state of the museum, to be an object of importance to be ascertained. From a conversation which passed betwixt Dr. Munro and some of the members of that Committee, they were led to think, that the property of this collection was vested in the members of what is termed the Medical Faculty, and that of course it might be employed or disposed of by them in any way they pleased. But in answer to a letter on the subject, sent to Dr. Munro by order of the council, that gentleman states, that this collection forms *a part* of the *public collection*, and is placed there under the following regulations, by the managers of the Royal Infirmary:—"That the preparations shall be kept apart from the other preparations of the museum, in conformity to the regulations concerted with the Professor of Anatomy and Surgery, for the purpose of securing their preservation and their application to public utility;" and the expense attending it is stated to have been hitherto defrayed by Dr. Munro. Unfortunately, Dr. Munro's letter did not contain a copy of the regulations concerted betwixt him and the managers of the Royal Infirmary, so that this statement appears to the Committee a very unsatisfactory answer to the question contained in the letter of the council, viz. "Under what regulation is the collection placed?" The Committee have reason to think that the preparations belonging to this collection may be employed by all the medical and surgical professors, but they do not know whether there exists any regulation by which they are made accessible to the members of the medical profession in general; nor do they know at whose expense they are in future to be preserved, or an increase is to be made to them, as it is not probable that Dr. Munro will continue to defray the expense from his own private funds; nor is it to be expected, provided the articles are not intended to become his own private property.

It does not appear to the Committee that any money should be appropriated by the council to the purposes of this third collection, until it shall have been ascertained in whom the property is vested, and to what purposes the collection is to be applied; nor indeed do they think that money should be voted for it, unless it shall have been previously satisfactorily arranged that it shall be the unalienable property of the University, and that it shall be declared to be for the use of all the Professors of Medicine and Surgery, and, under proper regulations, for the inspection of the members of the medical profession.

The Committee think it advisable, previously to the regulations being formed for the duty of Conservator of the Public Anatomical Museum, that the council should ascertain, whether there be any objection, on the part of the present Professor of Anatomy, to the collection, given to the University by the late Dr. Munro, being made more extensively useful than it has hitherto been, by his permitting it to be used by his colleagues, and to be laid open to the profession, due care being taken that nothing shall be allowed to interfere with his own free use of it. They think it right too, that it should be ascertained from the managers of the Royal Infirmary, in whom they wish the property to be vested of such preparations as are sent to the University by their orders; what the regulations are which have been concerted betwixt them and the Professor of Anatomy and Surgery, for securing their preservation and their application to public utility; and whether there be any objection on their part to the collection being placed upon the liberal footing above stated.

If leave should be granted for the two collections, at present existing, being applied to the purpose above proposed, there would be little difficulty in making proper regulations for the preservation and increase of the museum; as by the leave of the managers of the Royal Infirmary, the two collections might be thrown into one, and all additional preparations procured would be added to it; care only being necessary to prevent confusion from a mixture of the preparations, belonging to this public collection, with those belonging to the private one of Dr. Munro. If Dr. Munro should object to the collection that belonged to his father, being made use of in this way, then the Committee propose that care should be taken that all the articles, at present belonging to it, should be kept in the best possible state of preservation, by means of the funds provided for the purpose; but that no new preparations should be added to it during the lifetime of the present professor, to prevent their being brought under the restrictive clauses contained in the deed of gift; and the council should be careful, when a new Professor of Anatomy is appointed, that it should be arranged with him that the collection should be put upon a proper footing, in order to its being made more extensively useful than hitherto. If the collections formed of preparations from the Royal Infirmary by order of the managers, is to be placed by that body under restrictions such as to prevent its being made generally useful, then the Committee conceive it should be ordered to be kept distinct and separate from the other collection, and the council should decline interfering with it at all, or furnishing funds for its preservation and increase, as under such circumstances it ought to be considered as a private collection.

University of Edinburgh.

Appendix. Order LXI***.

25 June, 1824.

In the event of leave being refused by Dr. Munro and the managers, for the collections under their control being placed under such regulations, it should be the duty of the conservator to keep the collection of the late Dr. Munro in the best possible state of preservation, and to prepare and preserve such articles as may be sent by the members of the medical profession, unconnected with the Royal Infirmary, to the University, but to keep them quite separate from any other collection, and for the use of all the medical and surgical professors, and for the inspection of the members of the medical profession.

Unless the pathological collection of the University be put upon a very different footing from what it is at present, the Committee do not think it can ever receive the cordial support of the members of the medical profession in general; for they must be well aware that at present, when preparations are sent to it and placed there, they are put out of their own reach and that of the profession, and can be seen only by special favour of the Professor of Anatomy. To this cause, and to the jealousy excited by its being generally known that the present Professor of Anatomy is interested in forming a private collection of his own, the Committee attribute the circumstance, of no preparation having been added to the University collection for a long series of years by the members of the Royal College of Surgeons (even before the formation of a museum of their own), from whom, as appears by the catalogue, many valuable morbid preparations were sent to the original collection during the lifetime of the late Dr. Munro, previously to the formation of the private collection of the present doctor. If, on the contrary, the University collection were under liberal regulations, the Committee have no doubt but it would be cordially supported by the members of the College of Surgeons, both as individuals and as a body, and that mutual advantage might result to the Museum of the University, and to that of the Royal College of Surgeons, from a liberal arrangement which might be made betwixt the two bodies, for an exchange of duplicate preparations, &c., such as, the Committee understand has already taken place betwixt the College of Surgeons and the Medical Department of the Army, through the liberality of the members of the Army Medical Board.

If an anatomical and pathological collection were established in the University, upon such a plan as has been above proposed, the Committee see no objection to its being placed under the immediate charge of the medical and surgical professors, the council reserving to themselves the right of visiting it from time to time, for the purpose of ascertaining the state in which it is kept, and the progress that it is making; it being completely understood, however, that it should be an unalterable and fundamental regulation, that the collection should be for the use of all the medical and surgical professors, and for the inspection of the members of the medical profession, at such times and under such regulations as should be agreed upon by the council and these professors.

The council will perceive by this Report, which the Committee regret has extended to such a length, that there are three points which are reckoned of importance by them—

1st,—That there should belong to the University a large anatomical and pathological museum;

2nd,—That it should be for the use of all the medical and surgical professors of the University, and their students; and,

3rd,—That it should be open to the inspection of the members of the medical profession.

The council will perceive also, that before any measures can be taken for attaining the proposed object, it is essentially necessary that they should know how far the present Professor of Anatomy and Surgery, and the managers of the Royal Infirmary are disposed to assist in forwarding it, by giving their consent to the collections under their control being made extensively useful for the advancement of medical science; how far it meets with the approbation of the medical and surgical professors of the University; and whether they would be disposed to take it under their charge, according to the plan proposed in this Report.

The Committee beg leave to propose, therefore, if this Report be approved of by the council,—

1st,—That a copy of it should be sent to Dr. Monro, with a request from them, that he will state whether he has any objection to the collection that belonged to his father being placed under the regulations proposed;

2nd,—That a letter should be sent to the managers of the Royal Infirmary, inclosing a copy of the report, and requesting that that body will be good enough to inform the council, in whom it is meant that the property of the preparations sent to the University by their orders should be vested; that they will favour the council with a copy of the regulations concerted with the Professor of Anatomy and Surgery with regard to them; and that they will state, whether there be any objection, on their part, to the preparations forming part of a large museum, under the regulations proposed; and,

3rd,—That a copy should be sent to the medical and surgical professors, with a request that they will favour the council with their opinion as to the expediency of the measure, and whether they will be disposed to take the charge of the collection, under the proposed regulations.

(Signed) W. Allan, *P.*

Report by the Medical Professors of the University of Edinburgh, on the communication relative to the Anatomical Museum made to them by the Honourable Patrons.—1*st July*, 1824.

1 July, 1824.

The Medical professors are quite of the same opinion as the Honourable Patrons, as to the importance of the subject of this communication, and beg to return their best thanks to the Honourable Patrons for the trouble they have taken, and the interest they have expressed on this subject.

The professors are of opinion—

1st. That the possession of a very large museum of anatomical and pathological preparations is very desirable for the University;

2nd. That the collection ought to be made as useful to all the medical professors, as the convenience of the Professor of Anatomy, (under whose more immediate charge it must be placed), and the safety of the preparations themselves will permit;

3rd. That the collection should be accessible to professional men not connected with the University, under proper restrictions.

The Senatus Academicus have already proposed to charge the medical professors with the superintendence of the Anatomical and Pathological Museum, gifted by the late Dr. Monro to the University, and of all additions that may be made to the University collection; and they are willing to undertake that charge, under the new regulations which are proposed—it being at the same time distinctly understood, that the Honourable Patrons are to possess "the right of visiting it from time to time, for the purpose of ascertaining the state in which it is kept, and the progress it is making."

University of Edinburgh.

Appendix. Order LXI***.

1 July, 1824.

The professors have the satisfaction to state, that Dr. Munro is not only willing to permit the collection, gifted by his father to the University (and to the exclusive use of which he is entitled) to be brought under the proposed arrangement; but also his own extensive private collection, provided that certain conditions, of which a copy is annexed, are agreed to.

The professors have carefully considered these conditions, and are of opinion, that they are reasonable and proper; and that if the preparations are regularly arranged, and well exposed to view, and catalogued, so that they may be referred to in the different lectures, and if the students are admitted to examine them on stated days of the week, all advantages will be derived from the Museum which is consistent with the safety and good order of the preparations.

The Medical professors cannot presume to pledge the concurrence of the Senatus Academicus in the proposed extended use of the Anatomical Museum, but will use their best endeavours to obtain the consent of the other members of the University to a measure which appears to them so desirable.

The professors are happy to be able to state, that the present moment is peculiarly favourable for carrying the proposed plan into execution, as alterations have been already commenced in the rooms connected with the Anatomical Theatre, by which the Museum will be both better arranged, and more satisfactorily exposed to view than at present.

As the proposed arrangement and enlargement of the Museum cannot be accomplished without much trouble to the Professor of Anatomy and Surgery, and the Conservator, additional assistance and considerable expense of materials, and as the University has really at present no funds which are applicable to the purpose, the professors trust that the Honourable Patrons will be induced to provide the necessary funds as stated by Dr. Monro.

The medical professors have only further to suggest, that as it may be difficult to foresee all the consequences that may follow, or inconveniences that may arise, from throwing open to the public the Anatomical Museum in the manner proposed, any arrangements which may be made between the Honourable Patrons and the Senatus Academicus at present, should be for a certain period of years only, and may be renewed or discontinued, as experience may shew the advantages or disadvantages of them.

Proceedings of Town Council as to Anatomical Museum.

Edinburgh, 28th April, 1826.

28 April, 1826.

The College Committee, whom the council were pleased on the 19th curt. to desire to draw up a statement of the proposed arrangement betwixt the Patrons and the Medical and Surgical Professors of the University, for the purpose of rendering the Anatomical Museum more generally useful to the medicalprofessors, their pupils, and the medical profession, with their opinion on the several articles of agreement, which arrangement has been suspended since August, 1824, in consequence of other important discussions betwixt the Patrons and the professors, beg leave to lay before the magistrates and council the following statement:—

Towards the termination of the summer 1824, a Report on the subject of the Anatomical Museum, belonging to the University, was made by the College Committee to the council, which Report having been approved of by the council, was transmitted to the medical and surgical professors.

The Report embraced certain proposals for rendering this Museum more generally beneficial to the medical school of the University, which were favourably received by the medical and surgical professors, who expressed their opinions on the subject in the shape of a Report, as made by them to the Senatus Academicus, concurring with the views of the Honourable Patrons; providing, however, that certain conditions suggested by Dr. Monro were agreed to by the council, and that the arrangement met with the sanction of the Senatus Academicus, of which they stated they could not be positively certain, although they promised "to use their best endeavours, and they had every reason to hope with success, to obtain their consent to a measure which appeared to them so desirable."

The College Committee reported, that it appeared to them that it would be of immense importance to the interests of the University, as well as of medical science—

1st,—That there should belong to the University a large and varied collection of preparations, illustrative of the sound and diseased structure of the different parts of the human body;

2nd,—That such collection should not be restricted to the use of particular professors, and of students attending their classes, but, so far as is consistent with the safety of the preparations, that they should be for the use of the medical and surgical professors of the University, who might wish to employ them for the benefit of themselves and of their students;

3rd,—That at stated times, and under proper regulations, the collection should be open to the medical profession in general.

The medical and surgical professors, in their answer, agreed entirely with the first of these proposals —with the second generally, stating that "the collection ought to be made as useful to all the medical and surgical professors, as the convenience of the Professor of Anatomy, (under whose immediate charge it must be placed) and the safety of the preparations themselves will permit"—and fully with the third, that the "collection should be accessible to professional men unconnected with the University, under proper restrictions."

The Medical and Surgical Professors further expressed their willingness to charge themselves with the general superintendence of the Museum.

The conditions suggested by Dr. Monro were—

1st. That 200*l.* shall annually be placed at his disposal for the expenses of the Museum, for which he will render an account;

2nd. That due care be taken, that nothing shall be allowed to interfere with his free use of the Museum;

3rd. That no preparation shall be moved from the press in which it is contained, excepting by himself, and that no drawing shall be taken from any of the specimens, without his special consent;

4th. That as it is the wish of the Medical Professors, that 100 copies of the printed catalogue shall be put at his disposal, for the purpose of being sent to those gentlemen who might probably enrich the Museum by donations, he trusts that the Honourable Patrons may not be disposed to object to this condition. He adds, "Should the Patrons agree to these conditions, I will exhibit my private collection, together with the Museum bequeathed to the University by my father, and describe its contents by the same printed catalogue, designating carefully the private from the public property."

857

University of Edinburgh.

Appendix. Order LXI***.

28 April, 1826.

The Committee have to report to the council, that they regard the completion of the proposed arrangement as of great importance to the University, and are of opinion that it ought to be carried into effect with as little delay as possible. They consider the present as a most favourable time for this purpose, as the Anatomical Museum has undergone a complete repair, and is now about to be transferred to the new rooms allotted for its reception.

The council has afforded to the conservator a liberal supply of bottles, turpentine, spirits, varnish, &c., which were required for the repair of the preparations, and have instructed to confer with Dr. Monro, and the other Medical and Surgical Professors, as to the proper arrangement of the catalogue, which in teaching their respective classes may occasionally be referred to.

The Committee are much pleased to find that the proposals of the Medical and Surgical Professors agree so nearly with those suggested by the council, and are satisfied that it is proper that the convenience of the Professor of Anatomy should be consulted in the regulations which may be adopted according to the plan proposed.

Of the conditions proposed by Dr. Monro, the first is, that 200*l.* shall be placed at his disposal annually for the expenses of the Museum. On this the Committee would remark, that they regard this sum as probably larger than may be required, and they would be guided in forming a judgment with regard to it, by the experience they have had of late years, whilst the repairs of the Museum have been going on, and a much greater expenditure must have taken place than may be contemplated in future years; in the mean time, however, they have no objection to recommend to the council that 100*l.* shall annually be placed at his disposal, for the support of the Museum which is made available to the Medical School, including conservator's salary, &c. &c., and of which Dr. Monro will be required to render an account. Should this sum be insufficient, a considerable fund might be obtained from the medical students, who will receive an evident advantage by their admission to the Museum, by a very moderate addition to the present dues.

Dr. Monro stipulates in the second place, that care shall be taken that nothing shall be allowed to interfere with his free use of the Museum. The College Committee consider that such interference would be unjust, but they are inclined to doubt the propriety of a private collection being kept in the rooms intended for the public one, as in fact they do of the existence of a private Museum, to which the preparations intended for the University Museum may be appropriated, and thus the intentions of the donors may be defeated. That this is not a visionary evil, is proved by the ruinous state of the University Museum previous to the late repair, and the circumstance, that scarcely a preparation had been added to it for nearly 20 years. Dr. Monro now, however, agrees to make his private equally accessible with the public Museum, so as to do away, in some measure, the evil which has arisen from the existence of two Museums instead of one.

The Committee have no objections to his other conditions. They have only further to recommend, that all preparations which in future may be sent to the University, unless specially marked as the private property of Dr. Monro, shall be considered as additions to the public Museum, and that the money granted by the city shall be applied only for the support of the Museum which belongs to the University.

The Committee would suggest that the council should approve of this Report, and transmit it to the Medical and Surgical Professors, with the request that they will take the subject into their early consideration, and draw up for the information and opinion of the council, such regulations as appear to them best suited for carrying the arrangement into effect.

(Signed) John Bonar, Jun^r. *P.*

Order LXI****.—A Copy of the Resolution of the Royal Infirmary, as to Preparations sent therefrom to the College, *Ordered* 11*th October*, 1826.

Return by the Managers of the Royal Infirmary.

Excerpt from Minute of a Meeting of the Managers of the Royal Infirmary of Edinburgh, held upon the 9th day of November, 1818 years. 11 October, 1826.

Present—

Right Hon. Lord President.	Andrew Wood, Esq.
Gilbert Innes, Esq.	Dr. Rutherford.
John Wauchope, Esq.	Dr. Wood.
Rev. Dr. Davidson.	Dr. Monro.
Samuel Anderson, Esq.	Dr. Hope.

Dr. Rutherford, Preses.

The Managers approved of the regulations respecting the opening of dead bodies, as amended, and ordered the same to be engrossed, as the regulations to be attended to in future; together with the letter from Dr. Monro, dated the 20th August last, respecting the preparing and preserving, for the use of the public, such of the diseased parts as should be sent from the Hospital, as relative to said regulations. And directed notice to be sent to the acting Surgeons of the House, requesting their attendance at the meeting of the Managers to be held on the 16th curt., that these regulations may be communicated to them.

Follow Regulations respecting the opening of Dead Bodies, referred to in the above Minute:—

"The body of no person, who shall die in the Infirmary, shall be opened, without the permission of the friends of the deceased, and also of two of the Managers, granted upon application from one of the Physicians or Surgeons of the Hospital.

"All bodies shall be opened publicly, at one o'clock P. M., unless the friends of the deceased require it to be done privately, or wish a different hour.

"The opening shall be conducted by one of the Junior Surgeons, assisted by one of the Surgeons' Clerks, unless the Physician or Surgeon, under whose care the patient had died, shall undertake that duty; in which case, the Junior Surgeon may assist or not, as he may think fit.

The Junior Surgeons and Surgeons' Clerks, shall take this duty in monthly rotation. Due notice shall be sent to the Junior Surgeon, when permission is granted to open a body.

"The Physician or Surgeon, who has requested the inspection, shall, if absent, specify to the Opera-

University of Edinburgh.

Appendix. Order LXI****.

11 October, 1826.

tor in writing, or by his Clerk who attends, what part or parts he wishes to be examined, and these only shall be inspected.

"The person, Physician or Surgeon, who conducts the opening, shall point out to the Students the morbid appearances that are discovered; and shall draw up, with as little delay as possible, a particular account of them; which shall be inserted in the journals of the house, after the history of the case.

"The Clerk of the Physician or Surgeon, whose patient the deceased had been, shall insert, in a book kept for the purpose, a short abstract of the history of the case, together with an account of the appearances discovered upon inspection; which books shall be laid on the Manager's table, at their meetings.

"Any parts that may have been separated from the body, for more particular examination, shall be replaced when the inspection is finished, only—if the peculiarity of their structure or derangement be great or striking, these parts, provided the friends of the deceased do not object, shall be sent to the Anatomical Museum of the University, to be there retained, apart from the other preparations of the Museum, in conformity to regulations concerted with the Professor of Anatomy and Surgery, for the purpose of securing their preservation, and their application to public utility. When the inspection of a body takes place subsequent to a surgical operation, the Surgeon who performed the operation may, the friends not objecting, if he see cause, retain the parts connected with the operation.

"If any parts are removed from the bodies of surgical patients, the Surgeon, who is giving clinical lectures at the time, shall have liberty to exhibit them to his class, previous to their being sent to the Museum of the University; but he must be careful that they sustain no injury while in his hands, by being too long kept, or otherwise.

"When an inspection is finished, the body is to be neatly sewed up immediately, and conveyed to the dead-room, there to remain till the time of interment.

"The Clerks are desired to pay particular attention to the above regulations."

Follows Copy Letter from Dr. Alexander Monro, referred to in the foregoing Minute :—

"*Edinburgh, August* 20, 1818.

20 August, 1818.

"Gentlemen,—I hereby make offer to prepare and preserve for the public, the diseased parts which may be sent from the Hospital, to the best of my ability; to keep them in a separate cabinet, and to give access to the Physicians and Surgeons attending the Infirmary, when they wish to examine them.

"I should wish that a Committee of the Managers be annually appointed, for the purpose of examining these preparations; and also to have a notification of the times at which the dissections shall take place; and also occasionally to have access to the book in which the histories of the cases and dissections are inserted, in order that a faithful record may be preserved. I have the honour to be, Your obedient servant, (Signed) "Alex. Monro."

Edinburgh, 23*rd October*, 1826.—That the foregoing is a true excerpt from the minute-book of the Managers of the Royal Infirmary, is attested by me,

(Signed) Alex. Boswell,
Clerk to the Incorporation.

Connected with the subject of Order LXI, *and of the Museum, are the following Petitions and Documents.*

(No. 1.)—Petition of the Council of the Royal Society of Edinburgh;

Humbly sheweth,—That the Council of the Royal Society of Edinburgh beg leave to submit to the consideration of the Honourable Commissioners, a claim which the members of the Royal Society possess, relative to their right of admission to the Huttonian collection of minerals, which belongs in property to the Royal Society, but is deposited in the Museum of Natural History in the College.

Dr. Joseph Black, the late Professor of Chemistry in the University of Glasgow, having become the proprietor of the Huttonian collection of minerals and fossils in 1797, made a donation of that collection to the Royal Society of Edinburgh.

By the fundamental charter of the Royal Society, that public body are precluded from making any collection or museum of their own, and it is specially appointed, that all antiquities, pictures, or manuscripts, which the Society may become possessed of, shall be deposited in the library of the Faculty of Advocates, and that all collections of subjects of Natural History, shall be deposited in the museum of the College of Edinburgh, so that both collections shall be open to the members of the Society, and to the public as far as possible. The words of this clause are as follows:—"Et nos ordinamus, ut cunctæ Res Antiquæ, Tabulæ Publicæ, Librique Manuscripti quos acquisiverit dicta Societas, deponantur in Bibliothecâ Facultatis Juridicæ, atque ut universa corpora quæ ad Historiam Naturalem pertinent, quæque eadem Societas acquisiverit, deponantur in Musæo Academiæ Edinensis, ita ut utraque Collectio aperta sit Sociis, et e republicâ sit, quantum fieri potest." In consequence of this, the Huttonian collection was deposited in the museum of the College of Edinburgh; but it was found, in the progress of years, that this arrangement, with regard to their specimens of natural history, was attended with inconvenience, both to the members of the Royal Society and to the Professor of Natural History, in whose custody they were placed. When, therefore, in 1808, a new charter was applied for and granted, care was taken to engross therein a clause, by which all future collections of the Society should remain in its own possession, so as to be more conveniently accessible to the members. As this clause was not intended to have a retrospective effect, it was expressly stated, that all right in the collections deposited in the College museum, prior to the granting this new charter, should be reserved and acknowledged to belong to the University of Edinburgh, under those original conditions of free admission to the members of the Royal Society, which have been already mentioned.

Accordingly, after the granting of the new charter, the rights of the Society, relative to their collections in the College museum, were not only fully acknowledged, but at no time so much as questioned. The Royal Society visited their collections in the College museum, and had a catalogue thereof made out; nor are they aware that free access to their collection was ever denied to any one of the members of the Royal Society, until of late years, when a new arrangement of the College museum was made in the lately-erected buildings appropriated for that purpose. Upon this occasion, the keeper of the museum, actuated by what motive your petitioners are unable to say, as he has not himself expressed it, thought proper to refuse to the members of the Royal Society admission to their own collection; and after a fruitless and unsatisfactory correspondence upon the subject, that refusal has been persisted in. To insist upon any unreasonable or uncourteous use of their privileges, is very far from the intention

of the Royal Society; but the Council conceive, that it would be a blameable dereliction of the charge intrusted to them, to suffer the just rights of the members to be withheld or invaded. They conceive it, therefore, to be their duty to embrace the present opportunity of soliciting the attention of the Royal Commission to the subject, in the hope that the inquiry which they may be pleased to institute, will lead to the amicable adjustment of the rights of both parties.

The petitioners have only to add that the Secretary of the Royal Society will be ready to attend with the various papers and documents, illustrative of the present claim, whenever he may be so required.*

And your petitioners shall ever pray, &c.

(Signed) WALTER SCOTT,
By order of the Council.

(No. 2.)—Petition of Henry Hulme Cheek, Gentleman, of No. 11, Gardner's Crescent, Edinburgh' to His Majesty's Commissioners for visiting the Universities of Scotland;

Humbly sheweth,—That the petitioner is engaged as joint-editor, in the publication of a scientific periodical, entitled "The Edinburgh Journal of Natural and Geographical Science," whose object is the general diffusion of the knowledge of natural history, and of the progress of geographical discovery.

That your petitioner had undertaken the consideration of a question in comparative anatomy, with a view to publication; and having learnt that there was deposited in the museum of this University, a skeleton, the examination of which was almost indispensable to his inquiry, your petitioner, in the early part of the last month, respectfully requested from Professor Jameson, the keeper of the museum, permission to have access to the collection, at the leisure of his assistant, for the express purpose of studying the particular specimen which your petitioner mentioned to him.

Aware, at the same time, that he was not a perpetual pupil in the class of Natural History, and anxious to prevent any obstruction to his wishes which such an excuse might afford, and which he had reason to anticipate from general report as well as from previous personal experience, your petitioner, after the professor had politely given assent to his request, hoped to secure the promised favour by providing himself with a ticket to the ensuing winter's course, though it was not in his power to derive any advantage from it, except as a passport to the museum.

It will be necessary that your petitioner should state, that the principal portions of the collection of objects of natural history are lodged in two separate suites of apartments within the College,—one being arranged for public exhibition; the other, which is principally composed of the skeletons of animals, not being in a state for general display, but of exceeding importance to the professed student of Natural History. (That this museum is sufficiently arranged for the use of scientific men, is evidenced by the fact, that Dr. Adams, a gentleman to whom the Professor has chosen to grant leave of entrance, is in the habit of visiting the collection at his pleasure.) When your petitioner received his museum ticket from the Professor, he inquired whether he could thereby obtain admission to the museum of skeletons: the Professor answered in the negative. Your petitioner then remarked to him, how essential a knowledge of the bones is to the student of Zoology, and asked him, whether it was not possible to obtain a general admission to that part of the museum. The Professor replied, "*The Royal Commissioners have not yet authorized me to throw it open to the public.*"

A few days after the above interview with the Professor, your petitioner went to the assistant-keeper, to see whether he had then leisure to attend your petitioner, whilst he examined the particular skeleton for which permission had been granted to him; and was much surprised to hear the assistant declare, that he was not allowed to show it; for that after your petitioner had left the room (where the assistant was present during the above conversation), the Professor had remarked, that your petitioner must not be admitted to the museum, until the assistant received particular orders—or something to that effect.

Happening to meet the Professor in the College library, a few hours afterwards, your petitioner stated his anxiety to see the skeleton which the Professor had been good enough to say he might examine; when your petitioner was told, he might see it in a month or six weeks, for the Professor was too much engaged at that time. Your petitioner represented that he had a paper already in the press, which had been kept in types for some time, to his pecuniary loss, merely that your petitioner might add certain measurements of the skeleton,—that the nature of a monthly periodical could not possibly admit of such long delay,—and earnestly entreated the Professor to allow him to perfect, by personal examination, the notes which had already been put into his hands. Your petitioner received no other answer than that the Professor "would see about it in a week or so." It being but too evident to your petitioner that his worst fears were now realized, he inquired of the Professor, "whether there were no "other means of obtaining access to that museum, without giving him the trouble to attend;" when the Professor exclaimed, "No, Sir, there is not. *It is my private property.* You might as well go "into my drawing-room."

Since the above period, a verbal message from the Professor has been delivered to your petitioner by his assistant, to the purport, that the Professor is himself about to have the skeleton described, and your petitioner may see it at any time afterwards.

Your petitioner, apologizing for the minute detail into which, for the sake of perspicuity, he has been obliged to enter, and grieved that his desire for the advancement of science in this country should render it necessary for him to expose a page so tainted in her history, seizes the earliest opportunity of laying the facts before His Majesty's Commissioners, prior to the termination of their labours. But so reluctant is your petitioner thus to undertake a duty which he now feels himself called upon to perform, that he would have sunk in oblivion this personal wrong, did not the united voice of an injured public urge him to seek redress. Indeed, had not your petitioner thought it preferable, in making this appeal, to separate his own case from the general grievance, he could have joined to his complaint the names of many men, as well of those eminent in science as of those citizens and students who are prevented from looking upon their own property by the individual who has been appointed as its keeper. But the instance which your petitioner now lays before you, is one where an express scientific object, sanctioned by supposed rights which had been purchased at an exorbitant price, was not sufficient to procure the mere examination of a single specimen; and though the wrong sustained by the public is intolerable, your petitioner cannot but think that this obstruction placed in the way of science by one who occupies her highest seat, and who might be expected to facilitate her progress by every means in his power, is far less endurable; and your petitioner, accordingly, claims the interference of those who wish their country well, and of those who can remove a tyranny so fearful.

* Papers here referred to received, and lie on Commission table.

University of Edinburgh.

Appendix. Order LXI****.

Your petitioner does not now allude to the fact, that the museum of the University is made entirely subservient to the class of Natural History, and that it is most unjust that any man of science who may not have been a pupil of the Professor of Natural History, should be denied admission to the collection, under the penalty of half-a-crown for every visit; because your petitioner had already complied with the requisitions, and consequently, in the present instance, the injustice of this imposition is not necessarily a matter of complaint.

Your petitioner, therefore, confines himself to his own particular case; and as, in the course of his scientific pursuits, your petitioner will have constant need of reference to the museum, and as it is of the greatest importance to him that he may be permitted to make such use of the specimens as would be required for their description or representation,

Your petitioner earnestly prays—

That the powers of His Majesty's Commissioners be exerted in behalf of your petitioner, so that he may have unrestricted access, on lawful days, to all those rooms in the University of Edinburgh where any specimens belonging to the museum (whether they be arranged for public exhibition or otherwise) are deposited; and that he may be authorized to make such examinations and drawings of the specimens (either by himself or by his assistants) as will be necessary for the purposes of publication.

And, *secondly*, that your petitioner be informed, whether there be any part of the museum to which, on account of its being the private property of Professor Jameson, he has not, in common with the public, a right of access.

And your petitioner shall ever pray, &c.

Committee of the University Commissioners on the Museum of Natural History in the University of Edinburgh.

Edinburgh, January 25, 1830.

25 January, 1830. The Committee direct the clerk to transmit a copy of the petition by Mr. Cheek to Professor Jameson, and to request that he will send to the Committee an answer to the petition in writing—that he will therein state, whether the facts represented in the petition are correct or not; and if they are incorrect, that he will explain the particulars in which they are so—that if it be correctly stated, that Professor Jameson had asserted to Mr. Cheek, that any part of the collection of skeletons referred to is his own private property, he will particularly explain the grounds on which he founds his statement; and that in answering this question, he will particularly advert to the individual skeleton referred to in Mr. Cheek's petition; and further, that Professor Jameson will give any other explanations, relative to the subject of the said petition, which he may think material.

The Committee further request Professor Jameson to state clearly, whether he now considers any part of the specimens in natural history, deposited in the museum or within the walls of the College, to be his own property, as an individual; and if he do consider any part of them to be his own property, he will further state precisely what the articles are, from whom they were obtained and brought into the museum, and where they are now deposited, which he holds to be of this description.

The following is the Answer received from Professor Jameson:—

To the Royal College Commissioners.

28 January, 1830. Gentlemen,—I beg leave to transmit the following answers to the queries, &c., in your minute of the 25th instant, and also to the inflammatory paper of the turbulent student, Cheek.

1. I did not refuse Cheek, the complainer, admission to the museum.

2. I did not say the collection of skeletons was my private property, although I might have done so with propriety.

3. The complainer, who has no right whatever to visit the magazine or private rooms, and no other claims on the public museum than any other student in the University, was told, on *demanding* to inspect the Dugong, that as soon as I was done with my investigations, which would be in a very short time, he would be allowed to examine it. What more could a student expect from his teacher?* This acquiescence, however, on my part, did not suit the pecuniary views of the complainer; he therefore, in place of laying his case before the Senatus Academicus, at once appealed to the public (so called), by means of an inflammatory article or articles in 'The Caledonian Mercury,' and afterwards, as I am told, followed up his attack on the Professor of Natural History, by a shameful article in a magazine with which he is connected.

4. Did not say, "The Royal Commissioners have not authorized me to throw open to the public the magazine department of the museum." In answer to a question put with great insolence of manner, I said, "The Royal Commissioners have not given me, or afforded me the means of opening these rooms to the public."

5. It is not true that Dr. Adam, a Member of the Royal College of Physicians, is allowed to visit the museum at pleasure.

6. The museum ticket, issued to students along with their class tickets, admits them to the public rooms, or the museum so called, not to the magazine rooms.

7. There are no perpetual tickets. Those gentlemen who attend oftener than once, may, if the professor think proper, be allowed to continue the attendance afterwards—*gratis*.

8. The collection in the private or magazine rooms is not principally skeletons—these form only a part of the *mare magnum*—brought together for arrangement—in that part of the college buildings.

9. If the complainer has a right to order the Professor of Natural History to open any package which he learns has arrived in the College, that he may get out the specimens to examine them; or, what is the same thing, if he is allowed to preambulate at pleasure the magazine rooms, when the articles are to be considered, in reference to the museum, as in boxes, all the students will, and very properly, claim the same privilege. Indeed, they are already anticipating something of this kind, from the stir making by the party engaged in putting down, through the Royal Commission, the Professor of Natural History.

* The specimen, indeed, was not in a fit state for the purpose of a student, so that I actually promised more than I could well perform at the time.

University of Edinburgh.

Appendix. Order LXI****.

28 January, 1830.

10. The museum of the College of Edinburgh—the most interesting in Great Britain—the result of upwards of twenty years' labour on my part—is now in so low a condition as to pecuniary means, that I (a keeper without a salary) was forced some time ago to part with my only assistant, and take on myself the whole duties of this important and extensive department of the College. The present establishment for the museum is the Professor of Natural History, assisted by a man to keep the door and stove, and a woman to wash and dust the room.* It must therefore be evident, from this statement, that until some pecuniary means are granted, as has been so liberally done in the case of the botanical garden, the arrangements must remain as they are at present.

11. I trust, therefore, the Royal Commissioners will again recommend to the proper quarter or quarters the necessity of something been done for the natural history department of the College. In short, without money, and further room-accommodation, the museum must retrograde, and that too in a way it would be well for a time to conceal from the public.

12. As the Barons of the Exchequer have part of the museum records in their possession, answers to the other queries cannot be given at present.

13. The Royal Commissioners will recollect, that I, on former occasions, expressed, and strongly, a wish that means could be obtained so as to render the museum more accessible by new regulations; which regulations, however, could only be rendered efficient by new apartments, and a parliamentary grant of money—or similar grants from the Crown, professors, and town of Edinburgh—all of whom are proprietors of the museum.

In concluding these notes, I feel it my duty most respectfully to say, that my present duties in the College museum are so engrossing, and even oppressive, that no consideration whatever, in the present state of the establishment, will induce me to increase them, being confident if I did so, I would be undertaking what I could not conscientiously perform.

I have the honour to remain, Gentlemen, your very obedient servant,

(Signed) Robert Jameson.

College Museum, January 28, 1830.

OMITTED.

The complainer says he could give the names of many men, as well of those eminent in science, as those of students and citizens, who are prevented by the keeper from looking on their own property.

It is not true that any one, however exalted or low, has been, by me or any one else, prevented visiting the museum. It is the first time I have heard of men of science, citizens, and students, having property in the College museum.

(Signed) R. Jameson.

(3.)—Papers relating to the Museum of Natural History in the University of Edinburgh, viz.

1. Extract from a letter received by the Commissioners from the Colonial Office in 1827.
2. Memorial to Lord Castlereagh by the Lord Provost of Edinburgh and the Principal of Edinburgh College, 20th April, 1807.
3. Lord Castlereagh's reply thereto, 14th May, 1807.
4. Letter from Mr. Barrow, Admiralty, to Rear-Admiral Otway, 5th June, 1819.
5. Abstract, containing the particulars of certain applications to the Treasury respecting the importation of articles for the Museum of Natural History in the University of Edinburgh.

(1.)—Extract from a letter received from the Colonial Office in 1827.

I have now the satisfaction to transmit to you a copy of the memorial presented to the Secretary of State by the Lord Provost and Principal Baird, in 1807, and also a copy of Lord Castlereagh's answer.—*(See these subjoined.)*

I do not find that there are any other documents on the same subject in the Colonial Office; but this appears to me the less material, as I cannot conceive that any doubt can remain on the question, which I understand from you is now raised, after the perusal of these papers.

The request and the answer both specify, that "the objects are to continue in *all future time* the "public property of the University, under the charge of the Regius Professor." It is quite impossible to explain away this stipulation in respect to any article received into the Museum since the date of Lord Castlereagh's letter, and under the orders and facility given, as promised in his Majesty's name, by the then Secretary of State.

(2.)—Memorial to the Right Honourable Lord Viscount Castlereagh, one of his Majesty's Principal Secretaries of State, &c. &c. &c., by the Right Honourable Donald Smith, Lord Provost of the city, and the Very Reverend Dr. George Husband Baird, Principal of the University of Edinburgh, *April* 20, 1807.

20 April, 1807.

The memorialists beg leave respectfully to state—

1. That the University of Edinburgh was established by his Majesty James VI. of Scotland, and has been honoured with repeated marks of protection and favour by successive Sovereigns.

2. That its increasing prosperity and reputation have proved it not undeserving of the Royal patronage.

3. That the number of students attending the lectures of the professors, during the present session of college, exceeds that of any former session, and amounts to above 1600.

4. That though the general state of this seminary is so flourishing, yet there are great and discouraging obstacles existing to the complete success with which some departments may be taught.

5. That the class of Natural History (a class founded and endowed by the Crown) is one department to which the memorialists at present presume to call the attention of the Right Honourable Lord Viscount Castlereagh.

* *Present Museum Establishment.*—1. Keeper, whose duties would require, for their proper performance, at least three assistants—I mean such duties should exist over a properly-provided establishment. 2. Door-keepers. 3. Women for washing and dusting.

[*University of Edinburgh.*

Appendix. Order LXI****.

20 April, 1807.

6. That a Museum, containing a collection of objects in different branches of the science of Natural History, is indispensably necessary for enabling a professor to teach it with advantage. But as there are no fixed or appropriate funds belonging to this University for defraying the expense of purchasing such objects, the Museum here is comparatively but very scantily filled.

7. That in these circumstances the memorialists humbly solicit the consideration of the Right Honourable Secretary of State to the following suggestions, viz. That he would be pleased to convey such communications to the servants of Government, or to others in our foreign settlements and dependencies, as may be laid before him by the Professor of Natural History, and as may lead them to collect and transmit such objects as will be fit for the purposes of the Museum, which objects are to continue in all future times the public property of the University, and under the charge of the Regius Professor.

8. That they cannot but entertain a confident hope, that the suggestion they have taken the liberty to make, will be honoured with the early and zealous support of the ministers of the Crown, as the measure it proposes (while it will be attended with no expense to Government) seems absolutely necessary to give full effect to the intention of Royal beneficence, in founding the Regius Professorship of Natural History.

9. That the memorialists make this application to the Right Honourable Secretary of State with a very anxious wish for its success, as the measure it proposes seems to them important, not only to that useful class more immediately concerned, but also to the general benefit of the University—an establishment from which the metropolis and the interests of learning, in this part of the kingdom, are daily deriving the most valuable advantages. (Signed) D. Smith, *Provost.*
Geo. H. Baird, *Principal.*

(3.) *Downing-street, 14th May, 1807.*

14 May, 1807.

Gentlemen,—I have received your representation respecting the state of the Museum of Natural History belonging to your University,—its present incomplete state, and inadequate funds, and suggesting that I should convey, from time to time, such communications to the servants of Government, or to others in our foreign settlements and dependencies, as may be laid before me by the Professor of Natural History, and as may lead them to collect and transmit such objects as will be fit for the purposes of the Museum; which objects are to continue in all future time the public property of the University, under the charge of the Regius Professor.

Having laid this representation before the King, I have received his Majesty's commands to comply with its request; and I beg leave to inform you, that I shall be happy to receive, from time to time, any applications from the Professor of Natural History, and to add my assurance, that it will give me the truest satisfaction, if I shall be enabled to further the views of the University over which you worthily preside, and to promote those particular objects to which you point my attention.

I have the honour to be, Gentlemen, your most obedient humble servant,
(Signed) Castlereagh.

To the Lord Provost of the City, and the Reverend the Principal of the University of Edinburgh.

(4.) *Admiralty Office, 5th June, 1819.*

5 June, 1819.

Sir—The University of Edinburgh having requested that a vessel may be sent to Hâvre, to bring from thence a valuable collection of Natural History, which the University has purchased at Paris, and which is expected to be at the above port about the 25th instant, I am commanded by my Lords Commissioners of the Admiralty to signify their direction to you, to order one of your small vessels to perform this service. I am, Sir, &c. (Signed) John Barrow.

Rear-Admiral Otway, Leith.

(5.) The following Abstract contains the particulars of certain applications to the Treasury, respecting the importation of articles for the Museum of Natural History in the University of Edinburgh:—

February 5, 1819.

5 February, 1819.

Of this date, the College of Edinburgh, in a petition to the Treasury, stated, "That his Majesty's "Government, in 1807, while the Right Honourable Lord Castlereagh was Secretary of State, were "pleased to extend their patronage to the Regius Museum of this University. They consented to trans- "mitting, under their authority, to the officers of the Crown in all the foreign dependencies of the empire, "copies of printed directions for collecting objects of natural history, in order to be deposited in the "Museum; and these papers have been transmitted accordingly from the Secretary of State's office. "The Senatus Academicus are in the hope of soon receiving valuable additions to the University col- "lection, in consequence of this liberal countenance of the Crown."

And the college, on the ground of the want of funds, crave a remission of the duties chargeable on the importation of objects of natural history; and the Treasury, in reply, stated—"That no general "order can be given; but my Lords will have great pleasure, upon the application of the keeper of the "Museum, from time to time, describing the articles arrived, to direct the immediate delivery of such "of them as have been usually so delivered for the English Universities, duty free."

And in reply to a memorial from the college, the Treasury, of this date, made the following regulations in regard to the importation of collections, viz. "That my Lords will not object to articles intended for "the University of Edinburgh, landed in England, being forwarded to the custom-house at Leith under "the regulations proposed by them, viz. That the articles, on arrival at an outport, shall be sent, under "seal of office, to the Custom-house in London, where the seals of office being also affixed, they shall be "forwarded, still unopened, to the Custom-house at Leith; it being, however, distinctly understood, "that the Crown is not to be at any risk or expense in removal of the articles."

On the 8th of May, 1821, the principal of the college wrote to the Treasury, stating, that "I lately "did myself the honour to transmit a memorial to you, for being laid before the Lords of the Treasury, "with a view to obtain their Lordships' consent to issuing a general order to the Board of Customs "here, for delivering to the keeper of the Regius Museum, free of duty, all packages coming addressed "to him from abroad, so that their Lordships might be saved the trouble of a particular application "from the University in respect to every separate package, as at present takes place.

"Since transmitting the said memorial, I have received a copy of an order sent to the Board in 1817 "by their Lordships, in reference to the Regius Botanical Garden: I beg leave to annex a copy of "the said order, and respectfully to suggest, that if they would be pleased to send a similar one in "favour of the Regius Museum, the object of the University would be accomplished." In answer to this application, the Treasury wrote to the Customs, authorizing the delivery of "plants and seeds

University of Edinburgh.

Appendix. Order LXI****.

"intended for the Regius Museum in the University of Edinburgh, duty free:" and also to the principal of the college, acquainting him with the above directions; "but that my Lords cannot, "without creating an inconvenient precedent, extend the order to other articles of natural history "or curiosity."

In consequence of the Treasury regulations, the following importations for the University of Edinburgh have been admitted duty free:—

1. 6*th Aug.* 1819.—Treasury order, on petition of the Senatus, that a collection contained in 41 boxes, and purchased at Paris for the Regius Museum, be delivered duty free. (*This appears to be the collection to which Mr. Barrow's letter refers*).

2. 30*th Nov.* 1819.—Treasury order, on application of Principal Baird that a box arrived at Leith, containing minerals from the island of Antigua, addressed to the regius keeper of the Museum in the University of Edinburgh, sent as a donation to the Museum, be delivered duty free.

3. 25*th July*, 1820.—Treasury order, on application of Sir John Marjoribanks, that a box containing a skeleton of a boa constrictor, Chinese pumice stone, specimens of the rocks of Macao, and other articles of natural history, brought from China by Mr. C. Marjoribanks, his son, be delivered duty free.

4. 25*th Nov.* 1820.—Treasury order, on application of Principal Baird, that ten cases, sent from India by the Marquis of Hastings for the Museum of Natural History, Edinburgh, be delivered duty free.

5. 2*nd Dec.* 1820.—Treasury order, on application of Mr. Swainson, for Lord Dalhousie, that four cases, containing some dried birds, sent by his Lordship from Halifax, Nova Scotia, as a present to the "National Museum at the University of Edinburgh," be delivered duty free.

6. 20*th Jan.* 1821.—Treasury order, on application from the college, that a box arrived from the East Indies, "the contents of which are objects of natural history, and are intended for the Regius Museum in the University of Edinburgh," be delivered duty free.

7. 22*nd Jan.* 1821.—Treasury order, on a letter from Mr. Planta, that a package, addressed to Lord Castlereagh, containing objects of natural history for the University of Edinburgh, be delivered duty free.

8. 5*th May*, 1821.—Treasury order, on petition of the college, that ten packages by a vessel from Calcutta, containing articles of natural history sent by the Marquis of Hastings for the Regius Museum, be delivered duty free.

9. 4*th Sept.* 1821.—On application from Colonel White, stating that he had brought from India two packages, one containing the skeleton of a camel, and the other a collection of plants, "for the purpose of being delivered to Professor Jameson, of Edinburgh, for the use of the Museum of that University." Treasury order, that the same be delivered free.

10. 31*st Oct.* 1821.—Treasury order, on application of Captain Stewart, that nine boxes of insects, fish, and shell-fish,—five jars of shells,—two Chinese shells, and the drawings of plants, by a vessel from China, be delivered duty free—"the same being intended for the Edinburgh Museum, or for the Horticultural Society."

11. 17*th Oct.* 1821.—Treasury order, on application from Messrs. Fletcher, Alexander, and Co., that a package, containing stuffed snakes and specimens of natural history, consigned to them by a vessel from Bengal, the same being intended for the Edinburgh Museum, be delivered duty free.

12. 21*st Dec.* 1821.—Treasury order, on a similar application from the same parties, that two farther packages by a vessel from Bengal, containing similar specimens for the use of the Museum, be delivered duty free.

13. 25*th July*, 1822.—Treasury order, on application of Mr. Alexander McClinty, that a box, by a vessel from India, "containing curiosities for the Museum of Edinburgh," be delivered duty free.

14. 23*th Oct.* 1822.—Treasury order, on application from the college, that a large case, by a vessel from Calcutta, containing objects of natural history for the Royal Museum, Edinburgh, be delivered duty free.

15. 16*th Dec.* 1822.—Treasury order, on application of the college, that a case, by a vessel from India, containing natural curiosities for the Royal Museum of the University of Edinburgh, be delivered duty free.

16. 21*st Dec.* 1822.—Treasury order, on application of the college, that two cases, containing natural curiosities and images of Javanese deities, presented by Mr. Colville, Batavia, to the Royal Museum, be delivered duty free.

17. 4*th March*, 1823.—Treasury order, on application of the college, that two kegs and three cases, by a vessel from New South Wales, the same being intended for the Royal Museum of the University of Edinburgh, be delivered duty free.

18. 5*th April*, 1823.—Treasury order, on application from Captain Basil Hall, that certain articles, intended for the University of Edinburgh, or the Geological Societies of London and Edinburgh, be delivered duty free.

19. 14*th May*, 1823.—Treasury order, on application from the college, that thirteen boxes, containing natural curiosities, presented by the Marquis of Hastings to the Royal Museum of the University of Edinburgh, be delivered duty free.

20. 23*rd July*, 1823.—Treasury order, on application of the college, that a case by a vessel from India, containing objects of natural history for the Royal Museum of the University of Edinburgh, be delivered duty free.

21. 30*th Aug.* 1823.—Treasury order, on application of the college, that a case, and three stone images, by a vessel from India, intended for the Royal Museum of the University of Edinburgh, be delivered duty free.

22. 28*th Jan.* 1824.—Treasury order, on application of the agent for Professor Jameson and Professor Graham, that two bags, containing specimens of natural history for the Museum, Edinburgh, and two boxes, containing seeds for the Royal Botanic Garden, Edinburgh, all by a vessel from Valparaiso, be delivered duty free.

23. 12*th Feb.* 1824.—Treasury order, on application of Professor Jameson's agent, that three cases, by a vessel from New South Wales, containing specimens of natural history, addressed "Museum, Edinbro'," be delivered duty free.

24. 15*th May*, 1824.—Treasury order, on application of agent for Professors Jameson and Graham, that the following articles be delivered duty free for the use of the University and Royal Botanical

University of Edinburgh.

Appendix. Order LXI****.

Gardens, Edinburgh, viz.—One case, by a vessel from Sincapore, containing specimens illustrative of natural history; one box, containing ditto, by a vessel from India; one box, containing minerals, per ship Seringapatam; one box of seeds and bulbs, by a vessel from the Cape of Good Hope.

25. *3rd July*, 1824.—Treasury order, on application of Professor Jameson's agent, that two boxes, by a vessel from Sincapore, containing minerals and a stuffed fish for the Edinburgh Museum, be delivered duty free.

26. *25th Aug.* 1824.—Treasury order, on application of Dr. Graham's agent, that one box, by a vessel from New South Wales, containing specimens illustrative of natural history for the University of Edinburgh, be delivered duty free.

27. *6th Sept.* 1824.—Treasury order, on application of Professor Jameson's agent, that one box, by a vessel from Batavia, containing specimens of natural history for the Museum, Edinburgh, be delivered duty free.

28. *21st Oct.* 1824.—Treasury order, on application of Professor Jameson's agent, that two packages from India, containing a stuffed crocodile, and the skeleton of an elephant's head, for the Edinburgh Museum, be delivered duty free.

29. *4th Nov.* 1824.—Treasury order, on application of Professor Jameson's agent, that two casks by a vessel from Sincapore and Penang, containing natural curiosities for the Museum, Edinburgh, be delivered duty free.

30. *17th Dec.* 1824.—Treasury order, on application of Professor Jameson's agent, that one case by a vessel from Sincapore, containing natural curiosities for the Edinburgh Museum, be delivered duty free.

31. *1st March*, 1825.—Treasury order, on application of Professor Jameson's agent, that one box, arrived by the Triton from New South Wales and India, containing specimens illustrative of natural history, addressed to the "Regius Keeper of the Museum of the University of Edinburgh," be delivered duty free.

32. *11th April*, 1825.—Treasury order, on application of Professor Jameson's agent, that three boxes of curiosities, and one box of shells, by a vessel from New South Wales, for the Edinburgh Museum, be delivered duty free.

33. *23rd April*, 1825.—Treasury order, on application of Professor Jameson's agent, that one case, by a vessel from the Cape of Good Hope, containing specimens illustrative of natural history, addressed "The Regius Keeper of the Museum of the University of Edinburgh," be delivered duty free.

34. *26th April*, 1825.—Treasury order, on application of Professor Jameson's agent, that five boxes by a vessel from Calcutta, containing models of native implements, intended for the Museum of the University of Edinburgh, be delivered duty free.

35. *11th May*, 1825.—Treasury order, on application of Professor Jameson's agent, that two cases, by a vessel from Sincapore, and one from New South Wales, containing curiosities, and a case from Bombay containing a sword, for the Museum of the University of Edinburgh, be delivered duty free.

36. *26th May*, 1825.—Treasury order, on application of Professor Jameson's agent, that a case, by a vessel from New South Wales, containing specimens of natural history, intended for the Museum at Edinburgh, be delivered duty free.

37. *25th June*, 1825.—Treasury order, on application of Professor Jameson's agent, that one case, by a vessel from Prince of Wales Island and Penang, containing specimens of natural history, and addressed "To the Museum, Edinburgh," be delivered duty free.

38. *30th June*, 1825.—Treasury order, on application of Professor Jameson's agent, that two cases, by a vessel from Calais, containing stones, minerals, &c., addressed to, and for the Museum, Edinburgh, be delivered duty free.

39. *7th July*, 1825.—Treasury order, on application of Professor Jameson's agent, that one chest, containing specimens of natural history, by a vessel from Calcutta, and two cases by a vessel from New South Wales, containing ditto, the same being for the use of the Edinburgh Museum, be delivered duty free.

40. *12th July*, 1825.—Treasury order, on application of Professor Jameson's agent, that one case, addressed "Edinburgh Museum," and one package, addressed "Professor Jameson," by a vessel from New South Wales, containing natural curiosities, intended for the Museum, Edinburgh, be delivered duty free.

41. *18th January*, 1826.—Treasury order, on application of Professor Jameson's agent, that two cases, by a vessel from India, containing specimens illustrative of natural history, intended for the Edinburgh Royal Museum, be delivered duty free.

42. *2nd May*, 1826.—Treasury order, on application of Professor Jameson's agent, that eight cases, by a vessel from the Mauritius, containing specimens illustrative of natural history, the same being addressed to, and for the Edinburgh Museum, be delivered duty free.

43. *15th June*, 1826.—Treasury order, on application of Professor Jameson's agent, that one box, by a vessel from India, containing specimens illustrative of natural history, addressed to the "Regius Keeper of the University Museum, Edinburgh," be delivered duty free.

44. *22nd August*, 1826.—Treasury order, on application of Professor Jameson's agent, that three cases and one tin case, by a vessel from Tampico, containing specimens of natural history, "for the University Museum, Edinburgh," be delivered duty free.

45. *13th Nov.* 1826.—Treasury order, on application of Professor Jameson's agent, that one case from Stockholm, containing an elk, an elk's bones, and two descriptive books, addressed to and for the University Museum, Edinburgh, be delivered duty free.

46. *28th Dec.* 1826.—Treasury order, on application of Professor Jameson's agent, that six cases, by a vessel from Bombay, containing plaster of Paris casts, addressed to, and for the University Museum, Edinburgh, be delivered duty free.

47. *12th Sept.* 1827.—Treasury order, on application of Professor Jameson's agent, that a box, by a vessel from New South Wales, containing specimens illustrative of natural history, addressed to the Regius Keeper, and for the Museum of the University of Edinburgh, be delivered duty free.

Proposed Regulations for the admission of Scientific Persons to the Museum.

On the 18th of August, 1827, Principal Baird, Dr. Hope, Professor Jameson, and Dr. Alison, were requested by the Commissioners to frame, for their consideration, such a set of Regulations for the introduction of Scientific Persons to the Museum of Natural History in the University of Edinburgh,

University of Edinburgh.

Appendix. Order LXI****.

as might appear to them the best calculated for that object, with as little degree of restraint as would be consistent with the safety of the various articles deposited in the Museum. The following Report was soon afterwards received:—

REPORT of the College Museum Committee to the Royal Commissioners.

The Principal and Professors, who have been requested by the Royal Commissioners to draw up regulations for the admission of scientific persons to the Museum of Natural History, have agreed on the following Report:—

They consider the great and leading object of the Museum in the University of Edinburgh to be, the instruction of the young men engaged in the study of the different branches of natural history in this University. It was with a view to that object, that the valuable collection of M. Dufresne was purchased by several members of the Senatus Academicus; and with the same view, all the funds that could be appropriated to the Museum, have been annually expended for its extension and support, and have, in fact, been found inadequate to these purposes. If any part of these funds had been diverted to other objects, the rapid increase of the collection, during the last fifteen years, must of necessity have been proportionally checked, and the advantage resulting to the students been proportionally diminished.

In so far as is consistent with the main object of the instruction of students, and the due preservation of the specimens for that purpose, it is certainly highly desirable, for the general improvement of the science, and for the reputation of the University, that this Museum should be made as accessible as possible to the public, and in particular to scientific men, after the manner of those Museums which are less used, or not used at all, for the purpose of academical instruction.

The want of funds, and the want of certain accommodations, have hitherto rendered it impossible, in the judgment of those best acquainted with the Museum, to make it generally available for the latter of these objects, without in a great degree sacrificing the former.

The want of funds has rendered it necessary to exact a fee of admission from visitors; which fee may no doubt often have been demanded of persons eminent in science, although it has been a general rule to make the admission free to individuals holding chairs in any Universities, and to such as are known to have distinguished themselves in any department of natural history.

The want of funds has also rendered it impossible to provide such attendants as are necessary, when articles of such a collection are to be made accessible to various individuals, and to be minutely examined, or drawings made of them.

The rooms which are filled with the collection, and in which it is displayed, are obviously unsuitable for such minute examination of the specimens by scientific men; and there are no separate rooms belonging to the Museum at present, which can be applied to that purpose.

If the difficulties arising from want of attendants and of accommodation could be removed, certain restrictions would still be necessary to guard against injury to the collection from the free admission of strangers, who may be desirous of minutely examining it; but these restrictions would not in that case be such as any gentleman engaged in the cultivation of science would feel as a hardship.

If one or more rooms in the neighbourhood of the Museum were allotted for the purpose, and one or more confidential attendants provided, it would only be farther necessary, that each person permitted to have access to the Museum for the examination of specimens, should subscribe a receipt for each specimen, or set of specimens, removed to such rooms for his use (as is done by the Professors when borrowing books from the Library); and the date of the specimens being replaced should afterwards be inserted in the same book with the receipt, and certified by the signature of the Keeper or Assistant-keeper of the Museum.

It would be right that any person applying for permission to make such use of the Museum, should be required to state, what set of specimens he wishes to examine, and with what object.

The Professor of Natural History is obviously the responsible person, to whom all such applications, for the use of the Museum, should be made; but it appears to the other gentlemen, who subscribe this paper, to be desirable that a small committee of the Senatus Academicus should be permanently associated with him in the duty of judging of such applications. In this opinion Professor Jameson coincides, so as far his own personal feelings or wishes are concerned; but he is doubtful whether he can, consistently with his duty as Keeper of the Museum, or agreeably to the terms of his commissions, delegate or relinquish any part of the power of granting or withholding access to the specimens. This difficulty the Principal and Professors think it necessary to bring under the view of the Royal Commissioners; but they presume it cannot be expected that they should themselves deliver any opinion in regard to it.

(Signed) Geo. H. Baird, *P.*
Thos. Chas. Hope.
Robert Jameson.
W. P. Alison, *M.D.*

On the Table of the Commission, but not printed.

Letter from Dr. Alexander Jameson, Edinburgh, in regard to the access allowed to the Library and Anatomical Museum of the said University.—Presented 2nd April, 1827. 2 April, 1827.

Order LXII.—Is there any Astronomical Observatory belonging to the College of Edinburgh, and any fund applied or destined to the maintenance of the same? and by whom is such fund managed and applied?

Return by the Senatus Academicus.

There was an Observatory erected on the Calton Hill, by an agreement fixed by the Town-Council, after consulting the Senatus Academicus, with Mr. Short. In that agreement, it was expressly stated that the Institution was intended for the benefit of the University, and that the Telescopes and other Astronomical Instruments were to be preserved in it, for the use especially of the Professors of certain classes. That the said Observatory and Instruments are now transferred, as far as any part of them remained, to the Astronomical Institution; but in what manner, or to what extent, the original destination of the Observatory and Instruments, or the interests of the University have been forwarded,

University of Edinburgh.

Appendix. Order LXII.

the Senatus Academicus have not, after inquiry, been able to discover. They have appended all the information they have been able to collect relative to this matter.

It appears that the University had endeavoured to induce the Patrons to establish an Observatory in the College early in the last century, and with such success, that in the year 1736 the affair was almost brought to a conclusion; but the troubles brought on the city by the Porteous Riot appear to have induced the magistrates to suspend their good intentions.

In the year 1740, the Earl of Morton having obtained 400*l.* of damages and expenses in a law-suit, he generously gave to the *University of Edinburgh* 100*l.* of this sum towards the building of an Observatory; and in furtherance of this most important addition to the College, a proposal was made to the Town-Council, by Mr. M'Laurin, the Professor of Mathematics, that a Course of Experimental Philosophy should be given, and the profits applied to the Observatory. The council approved of the measure, and appointed some of their number to distribute tickets, receive the names, and oversee the building. The College was opened on the 22nd of June, 1741. Besides the usual course, Dr. Plummer, Professor of Medicine and Chemistry, exhibited chemical experiments, and Mr. M'Laurin explained the principles of astronomy. Several noblemen and gentlemen contributed money; and altogether the fund for erecting the Observatory at that period amounted to about 300*l.*

With this sum at his disposal, Mr. M'Laurin procured a plan, (which may be seen in Maitland's History of Edinburgh, page 375), and, by an application to the magistrates, obtained a grant of some of the buildings on the south side of the College, which were to be taken down, and the Observatory erected on their site. The town further agreed to remit the duty (about 20*l.*) on the stones to be employed; and also placed at Mr. M'Laurin's disposal the materials of the old buildings which were to be taken down. The troubles that arose in Scotland, and the death of Mr. M'Laurin, which happened in 1746, put an end to the project of erecting an Observatory at that time.

The fund for the Observatory was put into the hands of two persons, both of whom unfortunately became bankrupt. However, a considerable dividend was obtained out of their effects;—insomuch, that some time after the year 1770, a sum was received of nearly 400*l.*

An anxious wish to obtain for the University the accommodation of an Observatory, brought the subject forward again under the joint direction of the magistrates and the Senatus Academicus. A plan was accordingly prepared by Mr. Craig, architect, and the foundation-stone laid by Provost Stodart, accompanied by the Principal and Professors, on the 25th of July, 1776.

About this time Thomas Short, the brother of the celebrated optician, came to Edinburgh, and proposed to establish a private Observatory, in which was to be placed a reflecting telescope of considerable magnitude and reputation. Unfortunately, the money which was to have been laid out for the accommodation of the University, was placed at his disposal, on the condition of his giving access to students for a small gratuity, and of the Observatory and instruments becoming the property of the Town-Council, as trustees for the public, on the demise of Mr. Short and his immediate heirs. But a change was made in the plan, to accommodate him with a dwelling-house; and in this way the money was spent, with the addition of one hundred guineas which had been gained by the Duke of Hamilton at Leith races in 1777, and liberally bestowed by him on this scientific undertaking. A kind of telescope room was built, but nothing like a scientific Observatory erected. In time, the town got possession of the property, and the University was as far as ever from obtaining the means of improving astronomy.

About the year 1812, the project of an Observatory was again brought forward, with better hopes of success, by a number of public-spirited individuals. An application was made to the magistrates for the ground on the Calton Hill which had formerly been given to Mr. Short, and they communicated with the Senatus Academicus on the subject; and it appears from the College records, that certain advantages were spoken of as likely to accrue to the University by the establishment of an Observatory in this way.

A corporate body was formed under the name of the Astronomical Institution. The ground was put in their possession, on the express condition of its being applied to the purposes of astronomy, and the payment of a nominal feu-duty. Whether the magistrates took care to have the exact advantages to the University defined, we cannot directly say, although the facts may be easily ascertained. An Observatory has, however, now been erected, at the sole expense of the members of the Institution. It is, perhaps, the most convenient and elegant structure of the kind in the world; but as yet it is unfurnished with instruments. The laws and regulations of the Institution are printed, and in the hands of the members. It is so far related to the University, that the three Professors concerned in the cultivation of Astronomy, viz., the Professors of Mathematics, Natural Philosophy, and Practical Astronomy, are *ex officio* directors of the Institution. From the liberal views of the body, it cannot be doubted, but that when the Observatory is furnished with instruments, all the facility to the instruction of students in practical astronomy will be given, which is compatible with one main object of the Institution, —the improvement of the science.

The Professor of Mathematics several years ago applied to the trustees for erecting the University buildings, for the means of placing a transit instrument and clock in the College, and of making such other observations as are generally useful to travellers and navigators. They have promised him the accommodation he wants, and no doubt will, to the best of their power, do all they can to forward his views.

Order LXII*.—Copies from the Council Records of everything relating to an Agreement between the Town and Mr. Short of the Observatory on the Calton Hill.

Return by the Town-Council.

(N.B.—The Papers referred to in this and the following Return, are not printed.)

Copies of the following Acts of Council, in relation to this matter, are herewith produced:

1. Act of Council in favour of Thomas Short, for a tack of half an acre on the Calton Hill, dated 22nd May, 1776.
2. Ditto altering the terms of the tack to be granted as above, dated 10th July, 1776.
3. Ditto ordering the agent to defend summons at the instance of William Pirnie, 9th January, 1782.

4. Act of Council in regard to appealing the judgment in said process, 27th February, and 8th October, 1788.
5. Ditto authorizing sundry sums to be paid on account of the Observatory, 23rd March, 1791.
6. Ditto authorizing agreement to be entered into with James Douglas to finish Observatory, 30th March, 1791.
7. Ditto containing the agreement made 20th April, 1791.
8. Ditto authorizing the sum agreed on, viz., 226*l.*, to be paid, 21st March, 1792.
9. Ditto refusing a claim for a farther sum, 10th April, 1793.
10. Ditto containing Memorial for Mrs. Douglas, and regulating the fee to be paid for attendance, 4th December, 1793.
11. Ditto confirming sublease of the Observatory to Robert Bowman, 3rd November, 1802.
12. Ditto authorizing an action of removing against Short's Heirs and George Young, 29th April, 1807.

Order LXII**.—Copies of everything relating to the present Observatory.

Return by the Town-Council.

Copies of the following Acts of Council are produced :—

1. Act of Council regarding the proposed establishment of an Astronomical Institution, and directing a communication to be made to the Senatus Academicus, dated 18th December, 1811.
2. Ditto containing letter from George Young, agreeing to remove from the Observatory, 25th March, 1812.
3. Ditto agreeing to grant a seal of cause to the Astronomical Institution, 1st July, 1812.
4. Ditto granting a feu of ground, under the conditions therein expressed, to the Institution, 20th May, 1812.
5. Ditto signing seal of cause and charter in their favour, dated 5th August, 1812.
6. Ditto agreeing to the erection of a building for the Transit Instrument belonging to the city, 11th August, 1813.
7. Ditto containing inventory of articles brought from the Observatory, and deposited in the City-chambers, 22nd February, and 1st March, 1815.
8. Ditto granting an additional piece of ground to the Astronomical Institution, 16th April, 1817.

Order LXII***.—Copies of any Proceedings of the Senatus Academicus of the University of Edinburgh, in December, 1811, in consequence of a Communication from the Town-Council, in regard to the Proposal for the Establishment of an Astronomical Institution on the Calton Hill.

Return by the Senatus Academicus.

EXTRACT from the Minutes of the Senatus Academicus of the University of Edinburgh, regarding the Establishment of the Astronomical Institution.

"*14th February*, 1812.

"The Principal laid before the Senatus Academicus the following letter from the Town-clerk, with the accompanying communications, respecting a proposed Astronomical Institution :— 14 February, 1812.

"*Edinburgh*, 23*rd December*, 1811.

"Dear Sir,—I beg leave herewith to send you an extract Act of Council, of date the 18th instant, authorizing the Lord Provost to transmit to the Senatus Academicus of the University the minutes of a meeting relative to the establishment of an Astronomical Institution in this place, with printed copies of an address to the public, and plan of the Institution; and which papers accompany the Act of Council, that you may take an early opportunity of communicating the whole to the Senatus Academicus. 23 December, 1811.

"I am, Reverend Sir, your most obedient servant,

(Signed) "C. Cuningham."

"*At Edinburgh, the eighteenth day of December eighteen hundred and eleven;*

"Which day, the Right Honourable the Lord Provost, Magistrates, and Council of Edinburgh being assembled, the Lord Provost produced in Council a Letter from Sir George S. Mackenzie, accompanying copy of minutes of a meeting lately held to consider of a plan proposed for the establishment of an Astronomical Institution in Edinburgh, together also with printed copies of an address to the public, and a plan of said Institution. The Magistrates and Council having considered said letter, they authorized the Lord Provost to transmit the whole of the above communications to the Senatus Academicus, and this Minute to be extracted, without abiding a reading in Council. 18 December, 1811.

"Extracted from the Records of Council, by

(Signed) "C. Cuningham, *Conjt. Clk.*"

Royal Society's Hall, 14*th December*, 1811.

A meeting, called by public advertisement, was held here this day, to consider a plan proposed for the establishment of an Astronomical Institution in Edinburgh; 14 December, 1811.

The Right Honourable the Lord Provost in the Chair.

Sir George Mackenzie, Bart. opened the business of the meeting, by reading a proposed address to the public in favour of the Institution, for which see the printed copy. Sir George then read the plan of the Institution, when the Lord Provost moved,—

"That the plan now proposed for an Astronomical Institution in Edinburgh, appears well calculated to effect the object in view, and to lay a strong claim on the support of the public."

On this motion being made, a few alterations were suggested. For the plan, as unanimously agreed to, see the printed copy.

University of Edinburgh.

Appendix. Order LXII***.

14 December, 1811.

It was then moved by Professor Playfair,—"That as very great benefit is likely to arise to the University from the establishment of the proposed Institution, the Patrons of the University be requested to communicate the plan to the Senatus Academicus, that it may be known whether the Senatus will accept the advantages which are offered by the plan of the proposed Institution."—Which was unanimously agreed to.

Professor Playfair also moved,—

"That in the event of the Senatus Academicus accepting the advantages which the proposed Institution offers to the University, powers shall be given to a committee, to consist of the proposed *ex officio* directors, together with Sir George Mackenzie, Bart., Dr. Brewster, Thomas Allan, Esq., James Bonar, Esq., James Ogilvy, Esq., and Mr. Adie, optician, to publish the address to the public, the plan of the Institution, and the resolutions passed at this meeting; to call general meetings, and to do everything which to them may seem necessary and proper for forwarding the object in view; five to be a quorum, and Sir George Mackenzie to be convener."—Which was unanimously agreed to.

Sir George Mackenzie was requested to prepare a copy of these Resolutions, to be transmitted by the Lord Provost to the Principal of the University, to be by him laid before the Senatus Academicus.

On the motion of Sir George Mackenzie, the thanks of the meeting were given to the Lord Provost for his attention to the business of the meeting.

(Signed) Wm. Creech.

The Senatus Academicus having considered these papers, came to the following Resolution, and authorized the Secretary to transmit a copy of it to the Patrons:—

The Senatus Academicus having respectfully and maturely considered the papers respecting the proposed Astronomical Institution, which had been transmitted to them by their Honourable Patrons, were unanimously of opinion, that such an Institution, established under the regulations specified in these papers, promises to be useful to the progress of physical science and the interests of the University.

(Signed) Andrew Duncan, Jun. *Secretary.*

On the Table of the Commission.

A printed Paper on the Edinburgh Astronomical Institution, given in by Principal Baird.

Order LXII****.—A Return of the whole amount of the Sums annually received by the Professor of Botany for defraying the Expenses of the Royal Botanic Garden, specifying the Sources from which the same are paid, and the Authority by which such Sums have been granted, with the dates of the several Grants. Ordered 26th August, 1829.

Edinburgh, 1st September, 1829.

1 September, 1829.

Very Rev. Sir—I received late last night the letter to you from the Secretary to the Royal Commission, dated 26th August, requiring a Return of the whole amount of the sums annually received by the Professor of Botany for defraying the expenses of the Royal Botanic Garden, specifying the sources from which the same are paid, the authority by which such sums have been granted, with the dates of the different grants.

The whole sum which I receive annually for the above purpose amounts to 844*l.* 3*s.*, and from the following sources:—

From the Civil List Establishment of Scotland	£419	3	0
„ City of Edinburgh	25	0	0
„ Board of Trustees	400	0	0
	£844	3	0

The first and last sums are issued under the authority of the Lords of the Treasury; that from the city under the authority of the magistrates. I cannot ascertain the date of the first grant from the Civil List. It amounted to £69 3 0

In 1776, there was from this fund an additional annual grant	50	0	0			
1783	100	0	0			
1810	200	0	0			
				£419	3	0
1763, grant from the city of Edinburgh				25	0	0
1828, „ Board of Trustees				400	0	0
				£844	3	0

I am, Very Reverend Sir, your very faithful, obedient servant,

(Signed) Robt. Graham,

The Very Rev. Principal Baird. *Professor of Medicine and Botany.*

Order LXIII.—When was the Library of the University of Edinburgh instituted; by what fund is it maintained; by whom is the application of those funds superintended; and what are the rules and regulations for the custody and management of the Library, and under which it is open to the professors, students, or the public?

Return by the Senatus Academicus.

(1.)—University Library.

I.—*History of the Library.*

In 1580, Mr. Clement Littil, commissary in Edinburgh, bequeathed his library "to Edinburgh and the kirk of God." This library, consisting of about 300 volumes, chiefly theological, was transferred

8/69

University of Edinburgh.

Appendix. Order LXIII.

by the Town-Council a year or two afterwards to the college, which they were then forming It thus laid the foundation of the University Library.

The Library was augmented by donations from the citizens, and from the alumni of the college itself. Among the latter may be specified, for the extent and value of their benefactions—Dr. Robert Johnston, Rev. James Nairne, and above all, the celebrated Drummond of Hawthornden. Drummond bequeathed his whole library, about 500 volumes, to the college; and the gift is very valuable, both from the eminence of the bestower's name, and from the rare specimens of our early literature with which the collection is enriched.

In 1763, the library of the Incorporation of Surgeons was added to the college library. This consisted of about 500 volumes, almost entirely professional, and now of very little value. On the subject of the transaction by which this accession was procured, the Senatus are preparing a separate memorial, which they will hereafter request permission to lay before the Royal Commissioners.

The principal bequest which the Library has more recently received, was by the will of Dr. William Thomson, who, in 1808, left it about 600 volumes, chiefly on medical subjects.

In the will of General Reid, special mention is made of *the Library*, as an object to the improvement of which his splendid legacy is to be applied.

II.—*Funds.*

The funds from which the Library is maintained and enlarged, arise from the following sources:—

1. Matriculation fee, or annual contribution of 10*s.* from each student.
2. Fees on each graduation in Theology, Medicine, or the Arts.
3. A donation of 5*l.* from each professor on his induction.
4. Annual payment of 20*l.* from the Royal College of Surgeons.
5. Occasional donations of books; and
6. The Stationers' Hall privilege.

1. The matriculation-money does not belong *exclusively* to the Library. Before 1811, it was the practice to pay 5*s.* for the matriculation-ticket, and to pay separate fees to the upper and under janitors. In 1811 and 1812, however, it was settled by a joint committee of the Patrons and Senatus, that a payment of 10*s.* should be levied in lieu of every such charge—that the janitor's allowance should be paid from this fund—and that the office of upper janitor should be abolished on the decease of the then incumbent. That event took place somewhat more than a year ago, and the fund is now burdened with only 70*l.* of janitor and porter's salary.

2. The fees payable to the Library from graduation are—

For the degree of D.D.	£11	2	6
——— M.D.	1	13	6
——— A.M.	1	12	6

The degree of LL.D. is a purely honorary degree, and no fee is paid upon it.

6. The Stationers' Hall privilege may be considered as producing, upon a very vague average, about 850 volumes a-year; which, at trade price, (the rate at which public libraries can generally purchase new books,) would cost about 350*l.* Many of them, however, would never be purchased, even at that reduced rate.

The pecuniary income of the Library may be stated at 1150*l.* From this sum is to be taken the salaries of the persons employed in the establishment. The principal librarians not only receive nothing from it, but pay over, towards the allowance of the second assistant, 30*l.*, being the whole salary allowed to them by the Patrons.

The first assistant has	£105	0	0
The second 84*l.*, but deducting 30*l.* as above, there falls to be stated against this fund	54	0	0
Catalogue writer	40	0	0
Keeper of Stationers' Hall	15	15	0
Salary of an agent, whom it is necessary to employ in London, for collecting periodicals, and demanding new books not delivered at the Hall	30	0	0
	£344	15	0
Allow for stationery (including vellum for diplomas), advertising, postages, freights, and every miscellaneous expense	100	0	0
Add the binding account, a department which, though conducted with rigid frugality, costs about	120	0	0
And also the sum paid to janitor and porter	70	0	0
And (for a reason which will be stated below) the sum which has fallen to the Library by the death of the upper janitor	115	0	0
	£749	15	0

Taking this sum from 1150*l.*, the estimated income of the Library, there remains only about 400*l.* applicable to the purchase of books. Experience shows this sum to be insufficient for doing what ought to be done, in purchasing foreign books, supplying blanks in British literature, and procuring the numerous duplicates which are needed of popular works, of which one copy may have been obtained from Stationers' Hall.

In these circumstances the Senatus found it necessary to look to some other means than the ordinary library fund, for meeting the heavy expense which must attend the removal of the Library to its new apartments. They appointed a committee to report on the present state of the Library, on the probable expense of its removal, and on the means by which that expense may be met. The Committee reported, 26th March, 1826; and in conformity with that report the Senatus have procured from their bankers a cash-credit for 2500*l.* on the joint security of General Reid's legacy, and of the ordinary library fund—the latter, however, not being made liable for larger instalments than 100*l.* per annum. The interest is to be paid from the sum which has fallen to the library by the death of the upper janitor.

Extracts from the minutes of the Senatus, containing the report of the Committee, the resolutions founded on it, and the correspondence with Sir William Forbes and company, are herewith transmitted; to which the attention of the Royal Commission is most respectfully and earnestly requested.

University of Edinburgh.

The measures recommended in the report are placed under the care of a special Committee of the Senatus, and have been more than a year in active and successful operation.

Appendix. Order LXIII.

III.—*Management.*

The ordinary management of the Library is in nine curators, appointed annually by the Senatus; of whom four retire from office every year, and are succeeded by the four professors next in seniority, who are willing to undertake the duty. Four of these curators are from the medical branch of the University, four from the general branch, as it is called, and one from the theological. The general branch includes all the classes which are neither medical nor theological. The incomes of the medical and general branches, from matriculation and graduation, are kept separate; as is also the expenditure of each. Dictionaries and other books of reference are bought at their joint expense.

There are at present two joint librarians. They hold their Commission from the Patrons. By the terms of that commission, they are bound to report annually to the Town-Council every book which has been bought for the Library, or presented to it. The fulfilment of this obligation, however, has not been claimed for very many years—if it ever was acted upon at all.

There are two assistant librarians appointed by the librarians; and the services of the college porter, when he is not otherwise employed, belong to the Library. It is quite obvious, that more strength would be desirable, where the demands of 1500 borrowers and consulters of books are to be supplied. The number of the latter will be greatly increased, when the Library removes to its new apartments.

An additional assistant has been employed in the Library, for twelve years, upon a very full Catalogue of the Library, which is now completed in seventeen folio volumes. To print the catalogue would be exceedingly desirable, but the pecuniary means are entirely wanting. A Catalogue of the medical books was printed in 1797, and an Appendix in 1805, but the sale has not paid the expense.

Copies are herewith transmitted of the printed rules and regulations under which the Library is open to the students, and to the professors and surgeons.

The whole number of volumes in the Library is about 70,000, and it increases at the rate of from 1200 to 1400 volumes a-year.

No. (1).—Report to the Senatus Academicus by their Committee on Library Arrangements.

26th March, 1825.

26 March, 1825.

Extensive and valuable as the University Library is, much must be done for it, before it can be accounted worthy of the seminary to which it belongs, or of the accommodations which the munificence of Parliament is preparing for it.

In many departments it is very defective. Its greatest strength is in medicine and natural history, at least in English publications on these subjects. It is respectable in classics, civil history, topography, voyages and travels, and belles-lettres. In ancient theology it has much that is curious—and its scantiness in modern theology is the less to be regretted, as there is a separate theological library within the University. But in every branch of physical science the collection is very meagre—and in all foreign literature it is wretchedly poor. Not only is the Oriental department nearly an utter blank, but in the modern languages of Europe, beyond a few standard French works—there is little worth the naming. These blanks it would undoubtedly be most desirable to supply—particularly at a time when the Library is about to attract so much more of the public notice.

But there are other things, for which, with a view to the removal of the Library, is not only *desirable*, but indispensably necessary, that provision be made without delay.

The scantiness of the Library funds has so limited the sum expended in *binding*, that the modern books have little justice done to them in this respect, and that the older have fallen into such utter decay as to be incapable of being moved without a thorough repair. Many of the most curious in their number, many especially of the most valuable classics, are not only unfit to meet the public eye in their present state, but are actually perishing, and would fall to pieces in the unavoidable hurry of removal, unless rebound or thoroughly repaired. The great room, where the old part of the Library is lodged, contains more than 30,000 volumes. Supposing (which is a very moderate calculation) that only one-third of these require repairs of any kind, and supposing further, that only 1500 require or deserve to be rebound, the rebinding of 1500 volumes, most of them folios and quartos, would, even at 5*s.* each, cost 845*l.*; and the repairing of 8500 more, at 1*s.* each volume, would cost 425*l.* If the expense of putting the rest of the collection into good order were calculated at only 130*l.*, the charge for binding and repairs indispensable before the Library can be moved, will certainly not fall short of 1400*l.* sterling.

The expense of arranging 70,000 volumes for removal, and of the actual removal and re-arranging of them, it is utterly impossible to calculate beforehand. But considering the time which such an operation will require, and the number of persons (all of them confidential and trustworthy) whom it must employ, it cannot cost less than some hundred pounds.

Next, It is indispensable that *New Catalogues* be prepared. The present working catalogue is become utterly defective and exceedingly inconvenient. Indeed, although it were more available in itself than it really is, it cannot be accommodated to the arrangements of the new Library. On the other hand, the great catalogue which has been recently compiled, is by far too valuable to be made an every-day drudge. A new working catalogue, therefore, and a new press catalogue, are quite indispensable. The first ought indeed to be begun immediately. The expense of the two cannot be less than 100*l.* If the attempt be persevered in, which has been begun, of forming, in addition to the alphabetic catalogue, one arranged according to subjects, it could not, even in the rudest way, be accomplished for less than 100*l.* more. A strong wish has often been expressed to have the catalogue of the Library printed. Joining in that wish very cordially, your Committee are obliged, after careful inquiry, to report it as their belief, that there is not the slightest chance of this being accomplished in any other way than at the expense of the Library fund; and that from the nature and the size of such a publication, it would very slowly, if ever, replace the original cost. It would be by far too expensive for the ordinary student to purchase, and not curious enough to tempt the bibliographer. In the cheapest form into which it could be thrown, it would occupy at least four large octavo volumes.

Besides these blanks, therefore, in the Library, which it would be desirable to supply, more particularly at the time when its removal is about to make both its riches and its deficiencies more prominent, expense must inevitably, and almost immediately, be incurred to the extent of more than 2000*l.* sterling.

871

University of Edinburgh.

Appendix. Order LXIII.

26 March, 1825.

It is high time for the Senatus to consider in what way this expense is to be provided for. From the ordinary funds of the Library, as they at present stand, a very short statement will prove that little can be expected. The whole income from matriculation fees and graduations cannot be taken at a larger sum than 1150*l.* From this fund the salaries of janitors, and every charge connected with college police or of miscellaneous expenditure, must be paid. These expenses, altogether unconnected with the Library, cannot, upon an average of the last three years, be stated at less than 350*l.* per annum. The salaries of the persons employed in the Library (although the principal librarians not only receive nothing from the funds, but pay over to one of the assistants every shilling of the allowance which is made to them by the Patrons), amount to about 250*l.* Stationery, postage, carriage of parcels, and other incidental charges, cannot be stated at less than 50*l.*

The *binding* of those books which are added to the collection each year, though regulated with an economy which is on the very verge of being disreputable to the establishment, and injurious to its permanent interests, amounts to more than 100*l.* per annum. The utter inadequacy of this allowance to the complete accomplishment of its purpose will be understood, when it is considered that above 1200 volumes are bound every year; and that, at the rate of 100*l.* per annum, the charge for each volume is only 1*s.* 6*d.*

There remains for the purchase of books, beyond the provision of the Stationers' Hall privilege, only 400*l.* per annum, a sum which, though managed with the strictest frugality, is ascertained by experience to be inadequate to its purpose. Any attempt, therefore, to meet the present extraordinary pressure, by lessening or altogether suspending the annual allowance for the purchase of books, would merely be to accumulate debt against the Library for future years under a different name. The ordinary purchases must be made, or the usefulness of the Library is at an end.

Some other means of procuring the funds for these indispensable purposes must be thought of, and without delay.

The Committee beg leave to mention the only three which have occurred to them:

1st, An augmentation of the matriculation fee;

2nd, A petition to Parliament for aid on account of the special object;

3rd, The raising of such a sum as may be necessary for the purpose, on the reversionary security of General Reid's legacy.

The first of these measures, it is obvious, would be unpopular. It could not be effected, too, without the consent and co-operation of the Patrons—which it may, perhaps, be thought that this is not the moment to solicit.

The Committee do not see upon what ground the second could succeed, without establishing a precedent of a very troublesome nature. They doubt, especially, whether such an application would have any chance of success, so long as the third expedient is within the reach of the Senatus.

As General Reid has expressly made the University Library a prominent object of his bounty, the Committee think it the most natural expedient that the Senatus should have recourse to this fund, at a time when its assistance is so urgently needed. Your Committee are persuaded that your bankers would be disposed to act on this occasion with that liberality and kindness which have marked all their transactions with the University, by either enlarging the extent of your present credit account, or by granting a special loan, as may be thought most advisable. In either case, the payment of interest might be provided for without any inconvenience to the existing arrangements of the Library, from the sum which has hitherto been paid, according to agreement, as an annuity to the late Mr. Fyfe.

All which is respectfully represented to the Senatus in the name and by authority of the Committee.

(Signed) Alexander Brunton, *Convener.*

(3.)—Resolution of the Senatus Academicus relative to the Report of their Committee on Library Arrangements.

9th April, 1825.

9 April, 1825.

The Senatus Academicus having resumed the consideration of the Report from the Committee upon Library Arrangements, and heard the opinions of the different members of the Law Faculty, resolved as follows:—

1st. That it is necessary, as well for the purpose of preserving the books in the Library from farther injury, as for that of fitting them for removal into the splendid apartments now erecting for their reception, that the whole collection, amounting to about 70,000 volumes, should be carefully cleaned by proper hands previous to their removal.

2nd. That there are several thousand volumes which cannot be removed until they are repaired, and a very large number requiring to be entirely re-bound previous to that operation; and that many of those are very valuable, and ought to be repaired or re-bound as the case may require, in a more substantial manner than the scanty funds of the establishment have hitherto allowed.

3rd. That it is necessary that an additional copy of the catalogue should be immediately commenced, and that a new press catalogue should be prepared, in order that they may be ready to receive the necessary markings when the removal of the Library shall take place.

4th. That it would be highly advantageous to have the whole collection subdivided into classes, and arranged according to subjects; and that this ought to be done to a considerable extent previous to its removal, in order that the different classes may be then at once arranged in those compartments of the new Library which may be allotted for their reception.

5th. That the ordinary funds of the Library are wholly inadequate to bear the expense of the repairing and binding, necessary to the preservation and removal of the books, and of the additional assistance that will be required previous to and at their removal; and that it would therefore be impossible to proceed to any of the steps required by the exigencies of the case, unless a considerable sum, derived from some other source, shall be placed at the disposal of the Library Committee.

6th. That the only expedient by which such sums can be obtained, is that of borrowing it, till the opening of General Reid's succession for the uses of the University,—an event, as to the ultimate certainty of which no member of the law faculty has intimated any doubt,—shall enable the Senatus Academicus, in pursuance of the objects pointed out by the settlement, to repay the loan.

7th. That the sum of 2500*l.* shall forthwith be borrowed, and applied, at least as much thereof as shall be necessary, for the purposes before mentioned.

8th. That shall be appointed a committee for the special purpose of effecting the loan; the manner and form of which shall be adjusted by them, reported to, and approved by, the Senatus Academicus.

University of Edinburgh.

The above resolutions were referred to a committee, viz., the Principal, Dr. Hope, Professor Bell, Professor Napier, Dr. Duncan, jun., and the Rev. Dr. Brunton. Professor Napier to be Convener.

Appendix, Order LXIII.

9 April, 1825.

(4.)—*On the Table of the Commission, but not printed.*

(*a*). Copy Report of the Committee appointed to consider as to the most eligible mode of obtaining, for the purposes of the Library, the sum agreed to be borrowed under the resolutions adopted at the meeting of the Senatus Academicus, held on the 9th of April, 1825.

(*b*). Correspondence with Sir William Forbes and Co., bankers, in Edinburgh, as to loan of 2500*l*., for the purpose of the Library.

(5.)—Regulations to be observed in the Library, in regard to Professors and Members of the Royal College of Surgeons.

1st. The Library will be open every lawful day, from ten o'clock, A. M., till three o'clock, P. M., with the exception of Saturdays, when the Library will be shut at two o'clock, P. M.

2nd. Every volume lent out to the professors and members of the College of Surgeons, must be marked down in a book kept for the purpose; and they shall attend, at the time of borrowing, and sign the receipt-book.

3rd. No professor, or member of the College of Surgeons, shall be allowed to have out more than twenty-five volumes (not works), at a time, without a written application to the curators, and their leave obtained.

4th. As soon as a book is returned, the under-librarian, or his assistant, shall, in his own handweiting, acknowledge its being so returned; and if any book appears to have received any material injury while it has been last in circulation, the librarian shall report it the curators at their next meeting. If a book is lost, the price of it, as fixed by the curators, shall be exacted from the person losing it.

5th. The numbers of periodical publications, or books of any kind, shall not be allowed to circulate before they are bound, placed on the Library shelves, and regularly entered in the catalogue.

6th. Books, on the inside of the boards of which are written (by authority of the curators) the words "Not to circulate," shall not be lent out; but shall be retained in the Library for consultation; unless the person wishing any of them has obtained, by petition, the permission of curators to take them out for a limited time.

7th. The librarians shall not intrust any person with the keys of the Library presses, or suffer any one to take down or put up books into the bookcases.

8th. In the last week of the month of April, every year, notices shall be sent to all the professors and members of the College of Surgeons, who shall then have books in their possession belonging to the Library, desiring them to return to the Library, within the first seven days of the month of May, all the books borrowed beyond the six months preceding the date of the notice, under the penalty of not obtaining any more books, till all these that are marked under their names are returned; and they shall not be entitled to borrow immediately the said books again, if a written order for them has been previously lodged with the under-librarian.

9th. Any book may be called in, if asked for, that may have been at the time six weeks in the possession of a professor, or member of the College of Surgeons; and if the book written for be not returned within eight days after such notice, the holder shall not be allowed to borrow any books until he has complied with the request.

10th. All books sent in by professors from booksellers, on approbation, shall be locked up till the next meeting of curators, when they shall be brought before them; and no book shall be purchased without their order.

Extracted from the Regulations for the Library, ordered by the *Senatus Academicus*, November, 1821.

A. D., jun., *Sec.*

(6.) Theological Library.

There is a separate Theological Library in the University. It was founded by Dr. George Campbell, Professor of Theology, about the end of the seventeenth century. The Rev. Richard Stratton bequeathed to it 700 volumes, and the Rev. Thomas Wilkie 400. Its farther growth has arisen entirely from the contributions of the theological students at matriculation. It had been the practice of the Professor of Theology, under whose care it was placed, to allow to the students a greater or less share in the management. This practice having given rise to frequent disputes and much heart-burning, the whole matter was brought under the review of the Senatus Academicus, who, in April, 1817, appointed the Theological Faculty as curators, by whom all the accounts of the Library were to be annually audited, and its management superintended under certain regulations, of which a printed copy is herewith transmitted.

Its annual income is about 150*l*. The charges of management do not, on an average, amount to 20*l*. The remainder is expended in the purchase and binding of books. The number of volumes is about 5000.

Reported, on the part of the Theological Faculty, by
(Signed) ALEX. BRUNTON.

This library has no part of the Stationers' Hall privilege.

Laws for conducting the Business of the Theological Library in the University of Edinburgh, enacted by the Senatus Academicus, 12th April, 1817.

12 April, 1817.

1. The members of the Theological Faculty shall be curators of the Theological Library, and shall have the right of determining what books shall be purchased for the improvement of the students, of ordering books to be bound when it is necessary, of taking the measures which to them shall seem most expedient to recover books when they are missing; and, in general, of doing everything which they judge for the safety and improvement of the Library and the benefit of those connected with it.

2. They shall keep a minute-book, to be denominated "The Record of the Proceedings of the

Theological Faculty relative to the Theological Library," in which all their proceedings shall be duly engrossed.

3. They shall meet at two o'clock on the first Monday of each month during the Session, and on the first Monday of June, August, and September during the vacation, any two of them being a quorum; and they shall have the power of adjourning said meetings when the business requires it. The Professor of Divinity, or any two members of the Faculty, may call meetings when it is judged necessary.

4. The Professor of Divinity shall appoint two Librarians; it being understood that none but enrolled students shall be qualified to hold the office. The curators shall fix the allowances to be paid to the librarians from the funds; and in the event of making a new arrangement of the books, or a new catalogue, the curators may appoint such other assistants as are found necessary. The librarians shall hold their office during pleasure, and take an oath *de fideli* when they enter on the duties of it.

5. Each student shall, according to the present practice, pay Ten Shillings for the behoof of the Library, previously to his annual enrolment.

6. The Professor of Divinity shall be treasurer *ex officio*, and pay all accounts and demands on the funds of the Library approved of by the curators. The accounts shall be made up annually from the 1st of November to the 1st of November following, one copy of which shall be presented to the Senatus Academicus, and another put into the hands of the senior librarian, that the students may have an opportunity of seeing it. This shall be done annually for the preceding year, on or before the day of meeting after the Christmas recess.

7. The librarians shall enjoy no peculiar privilege in the use of the Library, in consequence of their office, but shall be bound to observe the same rules with the other students.

8. The librarians shall have exclusively the right to open the presses, to give out books, and to receive them when returned; and it is their duty to examine whether injury has been done to any book by writing on the blank leaves, or the margin, or in any other way whatever; and students transgressing in this respect shall be obliged to pay the value of the book injured, or replace it, under the judgment of the curators.

9. No student shall receive any book from the Library, until he has satisfied the librarian that he is enrolled by the Professor.

10. No student, on penalty of forfeiting his right to the Library for the rest of the Session, shall carry a book out of the Library, until his name has been entered for it, and it has been delivered to him by the librarian.

11. No more than two volumes at one time shall be lent to any Student during the session, and four during the vacation. Books in octavo and infra shall be returned in two weeks; those in quarto in three weeks, and those in folio in four weeks. Commentaries, dictionaries, and concordances shall be returned in two weeks, and the numbers of periodical publications, which are not twelve months' old, shall be returned at the next opening of the library, under the penalty of forfeiting, for the use of the Library, two-pence for each night that any volume has been kept beyond the time prescribed.

12. With respect to new publications which have not been in the Library twelve months, those in octavo and infra shall be returned in four days, quartos in a week, and folios in two weeks, or in each of these cases at the first opening of the Library, after the time prescribed has expired, under the same penalty, in case of failure, which is specified in the preceding rule.

13. In the event of accommodation being hereafter provided for reading in the Library, or in any apartment adjacent to it, it shall be competent for the curators to prohibit lending out commentaries, dictionaries, and concordances, and likewise new books and the numbers of periodical works, till they have been a specified number of months in the Library.

14. Any student, returning a book, may have it again, provided it has not been called for, during the time it has been out, by a person entitled, who has lodged his name for it with the librarians.

15. No book shall be lent to any student, residing at a greater distance than three miles from Edinburgh, unless by the special consent of the curators; written evidence of which shall be presented to the librarians.

16. In the event of any book being lost, the student who has borrowed it, shall replace the book, or pay the full value of it; and when unnecessary delay takes place, be subject to the same fine as if the book had been so long in his possession beyond the time prescribed.

17. The Library shall be open three days in the week during the session, on such days and at such hours as the curators shall judge most for the accommodation of the students; and during the vacation, it shall be open one day in the week; the particular day and hours to be fixed under the same authority.

18. In all cases of ordinary fines for books kept beyond the time prescribed, they shall be paid without appeal; but when books are injured, destroyed, or lost, the particular circumstances of the case shall be submitted to the curators, from whose judgment there shall be no appeal.

19. Every student, who, after having contributed the sum above specified to the Library, exercises the right he has acquired by receiving a book from it, shall be bound, *ipso facto*, to submit to, and observe the rules, under the penalties mentioned.

20. Preachers shall, during the pleasure of the Senatus Academicus, have the indulgence of borrowing books from the Library, on contributing annually the sum of ten shillings, and entering their names in a roll to be kept by the Professor of Divinity. But as preachers are not under the authority of the Theological Faculty, they shall, on receiving books, make deposits, in the same manner as is done by the students who receive books out of the general Library. In every other respect they shall be bound by the same rules, and be subject to the same penalties, with the students in Divinity.

21. In the event of two or more applications being made for the same book, the first application shall be preferred.

22. It is strictly provided that students shall take books from the Library for their own behoof only; and that in the event of any student lending the books to persons who have no connexion with the Library, he shall lose the benefit of it for the current year, and be fined in a sum equal to two annual contributions.

23. When a new librarian is to be appointed, his predecessor shall, under the authority of the curators, call in the books, that they may be compared with the catalogue, and the state of the Library accurately ascertained, when the new librarian enters upon his office.

University of Edinburgh.

Appendix, Order LXIII

24. These rules shall not be altered, nor any addition made to them, but by the authority of the Senatus Academicus.

25. These rules shall be printed for the information of all concerned; and, when it is found expedient to print a new catalogue of the Library, they shall be prefixed.

Signed, in name and by appointment of the Senatus Academicus,

Geo. H. Baird, S.S. T. P. *Primarius.*

Petition of a Committee appointed by the Students of Divinity, in the University of Edinburgh, to the Royal Commissioners.

Unto the Right Honourable the Commissioners appointed by his Majesty for Visiting the Universities of Scotland,

The Petition of the undersigned, members of a committee appointed by the Students of Divinity attending this University, and by them authorized to take whatever steps they deem advisable for advancing the interests of the Theological Library;

Humbly showeth,

That there is, in this University, a Theological Library, altogether distinct from the general Library. That this Library was founded in the year 1698, by a voluntary collection on the part of the Students of Divinity among themselves; that it has ever since been supported exclusively by their contributions, and is intended solely for their benefit. That your petitioners humbly conceive, that, upon these grounds, the Students of Divinity have a clear right, in justice and equity, to some share in the administration of the Library, and in the application of its funds. That this right, accordingly, has been frequently recognised by different Professors of Divinity, and exercised by the students. Little is known in regard to the history of the Theological Library; but your petitioners have reason to believe, that up to the commencement of the late Dr. Hunter's incumbency, about the year 1780, there were frequently, though not always, curators from among the students, who had some share in the management of the Library. Your petitioners have in their possession a catalogue, published in 1775, intituled, "Catalogue of the Books in the Library belonging to the Students of Divinity in the University of Edinburgh," which, your petitioners have reason to believe, was the exact title also of the former catalogues published, the one in 1757, the other in 1767. To the catalogue of 1775, are prefixed "The Rules of the Library;" the first and fundamental one of which is, "that the general management shall be in a librarian, appointed by the professor, and ten or twelve curators, to be chosen by the students by ballot." During the incumbency of Dr. Hunter, which lasted nearly thirty years, there were no curators appointed; but the accounts of the Library were always submitted, with the requisite vouchers, to the inspection of the students.

On the appointment of Dr. William Ritchie, your petitioners' present venerable professor, to the Chair, one of his first acts was, the re-establishment of the curatorial system. The regulations, which were in consequence drawn up and printed, with Dr. Ritchie's sanction, after being approved of by the professor, and by the students at a general meeting, declare, that "the Library shall be managed by two librarians appointed by the professor, and a committee of eight curators, to be chosen yearly by ballot by the students, with the approbation of the professor, who is *ex officio* president of the meeting." For two years, accordingly, during the years 1811 and 1812, these regulations were in force, and the curators appointed by the students managed the affairs of the Library; but they could never prevail on the professor to exhibit to them a state of the accounts; and when, in consequence of his evasions of their demand, the curators took measures for more exactly ascertaining their rights, the curatorial management was broken up. Two years after, in 1815, the students presented proposals to Dr. Ritchie for the revival of the curatorial system. In the course of the discussions to which this gave rise, Dr. Ritchie repeatedly and most solemnly acknowledged the right of the students to manage the Theological Library, conjunctly with the professor. In a paper, in his handwriting, now lying before your petitioners, and addressed to the Students of Divinity, authorized to meet in the Divinity Hall, on Saturday, 25th March, 1815, we find these words:—"That paper was never announced by me from the Chair, for receiving the approbation of the students, in concurrence with that of the professor; and without being so announced and so approved, how can a deed of legislation for our hall be said to have the sanction of official authority?" And again,—"In the course of next session, I will submit to the students some regulations for the management of the Library, by which, when mutually adopted, we shall be mutually bound to abide." "These regulations," he adds, "I presume not to think of imposing on you, but of submitting to you, for your approbation or disapprobation." And, in another communication to the students, dated 27th December, 1815, the original of which is also in the possession of your petitioners, the professor says,—"When that room" (a room in the new college) "shall be prepared for the reception of the books, then will be the time for making our new arrangements; then curators must and shall be chosen. With their assistance, a constitution for the management of the Library, which is so much needed, shall be made out and recorded; the establishment of curators, as far as depends upon me, shall be rendered permanent; and thus every object, which I believe the students have in view, shall be obtained."

After considerable negotiation, a public meeting of Students of Divinity was held in the hall, the professor in the chair, to appoint a committee for drawing up a constitution for the Theological Library. The professor proposed a list of twenty-one students for this purpose; another list was proposed by a student; and the roll of the hall being called over, the appointment of the list proposed by the professor was carried by a considerable majority. Another public meeting was held in the hall on the 15th of March, 1817, for receiving the report of this committee, the professor being in the chair. But the report was no sooner read, than the professor, disapproving of its proposals, dissolved the meeting amidst clamour and confusion, and would allow no further discussion. The students now prepared to take the matter before the Presbytery of Edinburgh, when the professor announced to them, that he had given over the matter to the Senatus Academicus; and required them, in its name, to submit their claims and documents to that learned body. The students did so; and the Senatus Academicus, on the 12th of April, 1817, framed a code of laws for the management of the Theological Library; in which, among other enactments, they appoint the Theological Faculty perpetual curators thereof. By these regulations, the enactment of which, your petitioners believe, was the first instance in which the Senatus Academicus interfered in the management of the Theological Library, and the validity of which the students have never admitted, the students have been deprived of a right to

875

University of Edinburgh.

Appendix Order LXIII.

a share in the management of the Library,—a right which your petitioners humbly conceive to be founded on the clearest principles of justice and equity,—a right which their predecessors have often exercised, and the validity of which has been solemnly acknowledged by the present professor. Under the authority of these regulations, enacted by the Senatus Academicus, the Theological Faculty have, since the year 1817, been curators of the Theological Library; and your petitioners now feel themselves called upon to state how the Library has been managed, and how its interests have been attended to, under their curatorship. Your petitioners are extremely sorry to be under the necessity of making any statements which may appear to imply a neglect of duty, in persons for whom they are bound to entertain every respect; but they trust that the Right Honourable Commissioners will admit, that their conduct is justified by the consideration—that there is no alternative between exposing the real state of facts, and submitting to the system becoming perpetual. One of the regulations issued by the Senatus Academicus in 1817, declared that the Professor of Divinity should be treasurer *ex officio*, &c.; "that the accounts shall be made up annually, from the 1st of November to the 1st of November following; one copy of which shall be presented to the Senatus Academicus, and another *put* into the hands of the senior librarian, that the students may have an opportunity of seeing it." Now, this regulation never was complied with, during the nine years that have elapsed since its enactment; and the students knew nothing of how their money had been expended, till about the close of last session, when they publicly demanded that these accounts should be produced. When these accounts were produced and examined, the students discovered still greater reasons of dissatisfaction. The books had been uniformly purchased for the Library at the highest publishing prices, while no discount was ever asked, and scarcely any allowed; and the books themselves were, in many cases, such as can be of very little use to the Theological Student. But a far more important subject of complaint still remains to be mentioned. A great majority of the books purchased for the Library, with the students' money, during these nine years, had never been sent into the Library at all,—had never been even inserted in the catalogue, or in any way whatever authenticated as the property of the Library. The number of books which had not been sent to the Library amounted to about 500, probably 700 or 800 volumes. Upon the discovery of these facts, your petitioners had several communications with the professor about sending these books to the Library, of which the general result has been, that not many more than one-half of them has been transmitted; and, consequently, there are still above 300 volumes, belonging to the Library, which they cannot procure.

Another fact of considerable importance, to which your petitioners beg to refer, regards a Catalogue Raisonnée of the Library, drawn up in 1812; for the compilation of which 40*l.* were paid out of the students' money. This catalogue, Dr. Ritchie, in a public address to the students, dated 24th March, 1815, expressly promised to print in the course of the ensuing summer. Yet it has not been printed up to this day, though such a catalogue must evidently be in the highest degree useful to the students.

In addition to the unsatisfactory application of the funds of the Library, and the detention of so many of the books for so long a period, your petitioners have also to complain of a great accumulation of evils of a miscellaneous kind, highly prejudicial to the interests of the Library, and arising solely from the complete want of any efficient superintendence of its affairs. Your petitioners would particularly refer to the complete loss of a great many books belonging to the Library, and the constant violation of almost all the particular regulations enacted for its management. Upon the whole, your petitioners humbly conceive, that it is scarcely possible that the interests of the Theological Library, and of the Students of Divinity, for whose benefit it was intended, could have been more completely neglected than they have been for the last nine years, under the curatorship of the Theological Faculty. Your petitioners are humbly of opinion, that there would have been no occasion for the present complaint, if the students had been permitted to exercise their right to a share in the management of the Library. In regard to the *expediency* of the exercise of this right on the part of the students, it may be stated, that in the Universities of Glasgow and Aberdeen, the sole and uncontrolled management of the Theological Library is in the hands of the students; and that the excellent system of management which prevails in both these places, presents a most striking and painful contrast to the state of matters in the Theological Library of this University.

The most satisfactory evidence of all the facts which have been stated, and of all the allegations which your petitioners have now made, can be produced.

May it therefore please the Right Honourable Commissioners to institute such an investigation into the subject as to their wisdom may seem expedient, with the view of procuring a speedy redress of these grievances, and securing the prevention of them in future, by restoring to the Students of Divinity the exercise of their right to a share in the management of the Theological Library.—*And your petitioners will ever pray, &c.*

(A copy of the above petition (omitting the signatures) was ordered to be transmitted to the Principal and Professor of Divinity of the University of Edinburgh, and the following is the answer returned.)

Proceedings of the Senatus Academicus of the University of Edinburgh, on the Communication of the 29th December, 1826, sent to them by the Royal Commissioners.

Senate House, 16th January, 1827.

The two following communications from the Royal Commissioners were read, in regard to the management of the Theological Library. They were referred to the Theological Faculty, who were directed to report to the Statutory Meeting on Saturday next.

Senate Hall, 27th January, 1827.

27 January, 1827.

The consideration of the petition of the Students of Theology to the Royal Commission was resumed. The Report of the Theological Faculty on the subject was called for, given in, and read as follows:—

Report by the Theological Faculty on the petition, &c. remitted to them by the Senatus Academicus.

The petition which the Students of Theology have presented to the Royal Commissioners, divides itself into two perfectly distinct parts:—

1. It complains that the regulations, enacted by the Senatus in 1817, take from the students that share in the management of the Theological Library, which, in *right*, and in *expediency*, they ought to enjoy;—and,

2. It complains that these regulations have not been fully carried into effect by the Theological Faculty.

University of Edinburgh.

Appendix. Order LXIII.

27 January, 1827.

It is, no doubt, chiefly in regard to the latter point, that the Report of the Faculty is required; but, since the Senatus have remitted to them the petition generally, they beg leave to premise a very few observations on the other.

1. The Faculty are utterly at a loss to understand what *right* can be vested in the Students of Theology, which ought to have prevented the interference of the Senatus in 1817. They are not aware of the existence of any writings whatever, or of any continued practice, by which such a right is established. The plea, that the Library has been purchased with the money of the students, applies, with almost equal force, to the general Library of the University—in the management of which the contributors have never thought of claiming a share. The employment, in the Theological Library, of curators chosen from among the students, appears, so far as the Faculty can trace the practice, to have been introduced by Dr. Hamilton, merely as a relief to himself from labour in his old age. It was discontinued, under his own eye, immediately on his obtaining a colleague able to undertake the whole charge of the Library; and though strong admissions are quoted by the students in their petition, as having been made, in favour of that system, by the present professor, while he was new to the privileges and duties of his office, such admissions could by no means be binding upon the Senatus, when called to legislate, not for the incumbency of an individual, but for all time to come. It seems needless, now, to enter into lengthened explanation of the grounds on which such admissions may have been made, and afterwards withdrawn. Nor is it in the power of the Faculty to do so satisfactorily; for, in framing this Report, they have avoided calling for the assistance of Dr. Ritchie—partly on account of the state of his health, and far more, because they were unwilling, without the hardest necessity, to bring him again, individually, into collision with the petitioners.

As to the *expediency* of the case, the Faculty think it sufficiently obvious, that young men, however respectable and intelligent, cannot, when just entering on the study of theology, be considered as the fittest judges in the choice of the books by which that study is to be aided. But, even had this consideration been less weighty, the question of expediency seems to be solved by the single fact, that either the claiming or the exercising of this alleged right has, now for about half a century, been the occasion of contention, and unseemly strife, between the Students of Theology and their Professor. On this ground alone, the Faculty humbly conceive, the Senatus would have been not only authorized, but bound to take up the case, whenever it was brought before them.

The arrangement made in 1817 was understood to be, at the time, satisfactory to all parties; and, if fully and faithfully executed, seems still to promise permanent usefulness.

II. But the Faculty take blame to themselves for the imperfect manner in which the regulations have been carried into effect. They do not shelter themselves behind the plea, that their minute-book has, every year, been laid upon the table of the Senatus—and bears an annual docquet of approbation. They frankly admit, that, as curators of the Theological Library, their meetings have been less frequent, and their superintendence less strict, than the regulations ought to have been interpreted as requiring. The age and infirmities of their venerable convener may, in some degree, explain the cause of their remissness. The practical evils which have resulted from it, however, are, the Faculty trust, somewhat overrated in the petition; and there are alleviating circumstances in the case, to which they request the notice of the Senatus. The complaints most prominent in the petition, regard, on the one hand, the purchase of the new books at a higher rate than that at which it might be possible to obtain them; and, on the other, the accumulation of these newly-purchased books in the hands of the professor. Both of these practices have arisen out of a principle, which in itself was most laudable. It has been, for a long period, the custom in this department, that one respectable bookseller had a general order to send in, *for inspection*, all new books which seemed likely to suit the Library; under an obligation to receive back again such as the professor did not approve. So long as his health permitted, the present professor did, accordingly, inspect every newly-published book which was added to the Library. It is only in consequence of his growing inability to perform this laborious task, that the accumulation stated in the petition has swelled far beyond his own anticipation, and certainly far beyond the knowledge of his colleagues. Had the extent of the evil been more early made known to them, they would have done their best to redress it. But the first intimation which the Faculty received of its existence, was from the petition to the Royal Commissioners.

As the accounts of the Library have been regularly made up at the close of each year, since the curatorship of the Faculty began, they were at all times ready for inspection—and the printed regulations were in the hands of the students, which informed them of their right to inspect. While the librarians continued to report that the accounts were not demanded, it was thought needless, by a voluntary production of them, to invite a renewal of discussions which had proved so unpleasant to all the parties concerned in them. But the right was no sooner claimed, than the claim was complied with in its fullest extent—and the whole series of the accounts since 1817 was put into the hands of the students immediately.

For an inaccuracy of statement in the petition, on the minor point of *discount*, the Faculty beg leave to refer to the accounts which have annually been laid before the Senatus. They are not without hopes that the same evidence will show, that the books purchased have been, upon the whole, not unsuitable for a Theological Library. No request from the librarians for the purchase of such books as appeared to be the most requisite, has ever been neglected—and very many such suggestions have been made since the curatorship of the Faculty began.

The *printing* of a new Catalogue of the Library, the Faculty considered as premature, when they were yearly in expectation of occupying the apartments allotted for it—because it will be indispensable to make, at that time, a thorough examination—and an entirely new arrangement of the whole. The Faculty believe that this cannot be delayed beyond Autumn next.

Inaccuracies in the list of books borrowed—by which, no doubt, very serious loss may be caused—and minor deviations from rule in other respects, instead of "arising solely from the complete want of any efficient superintendence," may perhaps be owing, in part, to the wretchedly inadequate allowance which the funds can afford to the librarians for their time and labour.

It is obvious, that the Faculty can have no reason for wishing to retain the curatorship of the Library, if any other management be thought more likely to promote its welfare. But they should do themselves injustice, on the other hand, were they not to add, that there rests on their minds no feeling whatever—arising out of the course which the Students of Theology have thought it their duty to take—which can lessen the willingness of the Faculty, most cheerfully to offer any service, which it may be put in their power to render to the interests of the Theological Library.

In name, and by appointment of the Theological Faculty,

Edinburgh College, 26th January, 1827. (Signed) Alex. Brunton.

8/77
University of Edinburgh.

Supplement to the Report of the Theological Faculty, on the Remit made to them by the Senatus.

As to the Papers called for by the Royal Commissioners, the Faculty have to report, in regard to Nos. 1 and 2,* that they are not aware of the existence of any such documents as are therein described. A book, called "The Donation Book," appears to have been in the hands of the students in 1815, and to have been by them intrusted to the late Professor Christison, whose repositories have been searched for it in vain.

The only document to which the Faculty have access, in regard to the history of the Library, is the inscription removed from the Old Divinity Hall, of which the following is a copy:—

"Bibliotheca hæc Virum pietate, prudentiâ et literis insignem, D. Geo. Campbell, S.S.T. apud nos, summâ cum laude professorem, grato animo auctorem agnoscit; ejus consiliis auspiciisque inchoata, et singulari curâ instructa. Post hunc plurimum debet Viris Reverendis, V. D. præconibus M^ro. Ricardo Straitton, Londinensi, et M^ro. Thomæ Wilkie, Ecclesiæ in Vico Canonicorum nuper pastori; quorum Ille DCC Codicibus eam augendam curavit, Hic CCCC Volumina testamento legavit—1719."

The Faculty herewith transmit their minute-book, in which are inserted all the accounts of the Library since their curatorship began in 1817.†

In name, and by appointment of the Faculty,
(Signed) Alex. Brunton.

Edinburgh College, 26*th January*, 1827.

The Senatus authorized the Principal to transmit this Report to the Royal Commissioners.

As to the papers required on this subject by the Royal Commissioners, the Senatus resolved in terms of the Report of the Theological Faculty on the subject.

(Signed) Geo. H. Baird, *Principal*

Order LXIII.*—"A Return of all Books entered in the Receipt-books of the Libraries of the Universities of Scotland, prior to the date of this Order, as borrowed out by the Professors respectively; specifying the Titles of the Books and the number of Volumes of the same, the Year when such borrowing took place, the name of the Borrower, and distinguishing such as may appear in the Receipt-books to have been borrowed by any Professor for the use of other Persons; together with a List of the Books which may have been returned to the Library by the Professors respectively, at the date of the Return thus ordered."

N.B.—The following Tables contain an abstract of the numbers of the books borrowed out and unreturned at the date of the Order, and the number of volumes returned between that date and the date of the respective Returns‡, together with the number of volumes borrowed for literary gentlemen, students, and others, made out in a similar manner.

University of Edinburgh.

Appendix. Order LXIII*.

Extract from the Minutes of a Meeting of the Senatus Academicus of the University of Edinburgh, held on the 21st of November, 1829.

"The following communication from the Royal Commissioners, to the Very Reverend Principal Baird, was read:—

'*Edinburgh*, 22*nd October*, 1829.

'Rev. Sir,—I am directed by the University Commissioners to refer you to the enclosed list of books, taken out from the Library of the University of Edinburgh by Professors, previously to 17th October, 1827, and not returned as on 26th May last; and to express the Commissioners' surprise that adequate measures should not have been adopted for recalling and securing to the Library the books to which reference has thus been made, in pursuance of the communication made to you on the 10th of November, 1828. I am at the same time directed to request, that you will cause a Return to be made to me, not later than the 8th December next, showing the number of *said* books which shall not have been returned to the Library before the 1st day of said month. I have the honour to be, &c.

(Signed) 'James Aitken, *Sec.*'

"The Senatus Academicus beg leave, in reply, respectfully to represent, that the Senatus Academicus lost no time, after the first communication, of date 10th November, 1828, in directing their Librarians to write urgent circular letters to every individual, or their representatives, having any of the books alluded to; and that they have every reason to be satisfied with the diligence with which their librarians executed their directions. In consequence of these circulars, and the other means employed for the purpose, the number of volumes was considerably reduced; and since the receipt of the communication of date 22nd October, 1829, still more pressing circulars have been sent with further effect.

"The Senatus Academicus regret that they do not feel themselves in possession of any more adequate means of recalling and securing to the Library the aforesaid books, than those already employed.

"Annexed is a statement of the effect of these repeated requisitions for the outstanding books."

(Signed) "Andrew Duncan, *Sec.*"

When the first statement of books borrowed by Professors, previous to 17th October, 1827, and out-standing on 23rd October, 1828, was made out, there stood against them in all . . . 660 Works, or 976 Vols.

Between 23rd October, 1828, and 26th May, 1829, the date of next return, there were recovered . . . . . 437 Works, or 671 Vols.

Making the number outstanding . . . . . 223 Works, or 305 Vols.

And by this date, 1st December, 1829, the Professors had made a further return of . . . . . 97 Works, or 143 Vols.

Which reduced the number to . . . . . 129 Works, or 158 Vols.

16 Works, or 28 Volumes, have been recovered from Lord Meadowbank, which stood against the name of his father, the late Mr. Allan Maconochie.

1 Volume, which stood against Dr. Cullen.
2 do. do. Dr. Murray.
4 do. do. Dr. Rutherford.

The Members of the Royal College of Surgeons have all complied, with exception of Mr. Turner, who is unwell.

Books still standing against Professors, borrowed previous to 17th October, 1827.

Edinburgh College, 5th December, 1829.—The preceding Tables were made up from the Receipt-books of the Library, with as much accuracy as possible.

(Signed) Nicolson Bain, *Under Librarian.*

Order LXIII**.—A Return of the number of Students who have availed themselves of the use of the Libraries of the Universities of Scotland, during Session 1826-27, with the number of Volumes taken out by each during that period. Ordered 9th and 27th October, 1827.

Edinburgh.—Before the facilities afforded for the transaction of Library business by the accommodation already obtained in the new apartments, it was not possible to make a satisfactory answer to the order. The librarians have now the satisfaction of forwarding a return of the number of students using the Library during the session 1827-28, and of the average number of volumes borrowed by each.

(Signed) Andrew Duncan. Alex. Brunton.

Return.—It appears, that during the winter session 1827-28, 1050 of the matriculated students (*there were* 1880 *matriculated students entitled to use the Library*) availed themselves of the use of the Library, and that 33,039 volumes had been receipted against them. The average number of volumes is, therefore, a little more than 31 to each student during the winter session.

Abstract of the Returns to the foregoing Order from all the Universities of Scotland:—

	No. of Students.	No. of Volumes.	Average No. of Volumes to each Student.
Edinburgh	1,050	33,039	$31\frac{4\,8\,9}{1\,0\,5\,0}$
Glasgow	458	4,612	$10\frac{3\,9\,2}{4\,5\,8}$
St. Andrew's	173	5,368	$31\frac{5}{1\,7\,3}$
King's College	119	674	$5\frac{7\,9}{1\,1\,9}$
Marischal College	14	69	$4\frac{1\,3}{1\,4}$

College, 11th January, 1830.

Sir,—In consequence of your request, I beg leave to state, that from 1st November, 1828, to 21st July, inclusive, there were 15,466 demands for books to be taken out of the Library, and perhaps two volumes might on an average be given out upon each demand. The number of demands for books for consultation, during the same period, amounted to 5311;—so that the number of students using the Library has increased since Session 1827. The consulters, in particular, have greatly increased: for instance, during 21 days of December, 1828, 652 demands were received for books for consultation in the Library—and during the same number of days in December, 1829, 937 demands were made upon us. The highest number of demands made in one day this Session was 65 (18th December, 1829).

I may also state, that the students, while in the consultation-room, are orderly, and do not disturb each other by conversation.

I am, Sir, your most obedient Servant,

(Signed) Nicolson Bain,

Sub-Librarian.

To James Aitken, Esq.

Order LXIII***.—Return of the total number of Books at present missing from the Libraries of the Universities of Scotland, distinguishing the number missing as at the 1st of January, 1826. Ordered, 1827.

Return by the Senatus Academicus.

Edinburgh.—It would not be possible to make a return "of the total number of books at present missing from the Library," without an entire and peremptory recall of all books at present borrowed,

University of Edinburgh.

Appendix. Order LXIII***.

15 October, 1828.

and a strict collation of the whole with the catalogue. This measure, so far as it is practicable, must be resorted to in autumn next, when the books are to be placed in the great room, and under the new arrangement. To attempt it just now, also, would evidently be attended with very great practical inconvenience; and, after all, would not afford a perfectly correct answer to the demand; for the experience acquired in removing the books has shown the old catalogues to have been very inaccurately made up. The thing, indeed, could not well be otherwise, for, at a remote period, it was the practice, that individual professors ordered, to their own houses, books which they bought for the Library, before such books were entered in the catalogue.

In order to comply, as far as is at present practicable, with the order of the Royal Commission, the librarians herewith transmit—

No. 1. List of books standing against professors and surgeons deceased, which it has not been found possible to recover from their families.

No. 2. List of books charged, of an old date, against present professors and surgeons, where either the claim is disputed, or has not been settled.

(N. B.—The numbers in these two lists are comprehended in the Tables contained in the first four pages.)

No. 3. List of books lost or carried away by students during the last fifteen years, for which deposits have been left, and which the curators have ordered to be purchased as opportunities may offer for procuring them.

(N. B.—Number of volumes contained in this list is thirty-seven.)

ORDER LXIV.—Are any meetings of Graduates held at the University of Edinburgh, and on what occasions, and for what purposes; or do any of the University meetings include the Graduates, and what are their privileges?

Return by the Senatus Academicus.

There are not any meetings of graduates held at this University, nor do any of the University meetings include the graduates.

To the Royal Commissioners appointed to visit the Universities of Scotland, the Petition of Graduates of Edinburgh College, Session 1827.

1827.

We, the undersigned Graduates of the Session 1827, being aware that your Lordships, and the Gentlemen composing the Commission, have been sitting for a considerable time, to receive reports concerning the Government of the University of Edinburgh, embrace this opportunity of laying before you certain grievances for your consideration, and (as we humbly trust) for redress.

I. When the government of a literary and scientific institution is left to individuals who, being almost exclusively engaged in commercial pursuits, cannot, from that circumstance alone (however free from party spirit) be supposed efficient for the task, we humbly conceive that its direction will frequently swerve from right and justice, and even if it should not, such a fortunate result must be attributed solely to chance.

Professors of the University of Edinburgh have always been chosen by the Lord Provost and town-council, and the manner in which the election is conducted, is to the exclusion of an open competition, and although it is far from our wish to make any reflections on any one of the individuals composing the present body of professors, we still deprecate the mode of election.

II. We would next respectfully call your attention to certain usages preventing our free access to the works in the college library,—a collection which it may be presumed was principally intended for the benefit of students. Such benefit, however, is completely counteracted by the following causes:—

1st, Professors, Members of the Royal College of Surgeons, and students, are allowed to retain books in their possession an indefinite period, sometimes extending to many months.

2ndly, Professors, and members of the Royal College of Surgeons claim a right of obtaining an unlimited number of books—the exercise of which right, by so many individuals, often places the books in general requisition beyond our reach.

3rdly, From the short time allowed daily for the delivery of books, and the small number of librarians employed, students are necessarily obliged to wait a great length of time, before ascertaining if they can procure *any* book, and often to return unattended to and unsupplied.

4thly, Certain books which, on account of their value, are not allowed to circulate amongst students, are notwithstanding accessible to professors and members of the Royal College of Surgeons; thus students are often prevented from enjoying even the limited privilege of consulting such works *within* the Library.

5thly, The provisions made to enable us to consult such works, are mean, miserable, and ill-calculated for the purpose intended. With scarce any accommodation for reading, and subjected to constant interruption, the ends of study are thus totally frustrated.

III. We would respectfully submit, that the Museum of Natural History being the property of the University, it appears unjust that the students (excepting those attending the lectures on the subject) should not have access to it, without paying for the ticket of admission.

The above remark, we think, applies also to the Anatomical Museum, which, if not the property of the University, is in a great measure maintained at its expense.

IV. We feel as a grievance the non-existence of any law or regulation by which a professor can be prevented continuing in office, when by age or other infirmity, mental or corporeal, he shall no longer be able to discharge the duty of his chair in a manner incumbent on him as a teacher, and essential to the welfare of the student.

University of Edinburgh.

Appendix. Order LXIV.

1827.

V. We would further represent, that we suffer material inconvenience from the practice at present pursued by the professors, of lecturing twice a-day, towards the conclusion of the session. We feel convinced, that without detracting from the absolute instruction contained in the courses at present delivered in the University, that they might be delivered in a six months' session, without requiring our attendance on each more than once in the twenty-four hours. In addition, we would state, that students attending the University for the first time, not being aware of the existing practice, generally enter to the lectures of one or more of the private teachers, whose instructions they are obliged subsequently to forego, in consequence of the hour at which they lecture, being occupied by the second lecture of some one of the professors in the University.

VI. The loss of time which happens, and necessarily the great expense, incurred by candidate graduates being detained in Edinburgh, one, two, or three months after having undergone the examination, which *de facto* qualifies them for obtaining the medical degree, is felt as a heavy grievance. Some pass more than three months previous to the final day of graduation, and yet are compelled to remain here ostensibly for two additional examinations, which are, it must be admitted, merely *pro formâ*—an instance of rejection at either of them being so rare, that the list of graduates is actually printed previous to their taking place. As the benefit of the town appears to be the only object gained by such detention, the undersigned respectfully submit, that this frivolous waste of time ought to be dispensed with, and that in future the graduates should be allowed to proceed whither they please, as soon as possible after they have satisfied the Medical Faculty of their being deserving of the diploma.

VII. We beg still further to state, that whereas one or two of the medical classes are regularly examined by their respective professors—a practice, the utility of which experience has fully demonstrated—we have to regret that this practice is not more generally adopted; and that whilst one professor examines his class personally and gratuitously, we feel it a grievance that some only employ a deputy, and others exact a fee.

VIII. *and lastly.* We beg leave to represent, that formerly the Saturday was considered a day on which the students were exempted from attendance on the University;—that those whose health required relaxation, or who had friends in the neighbourhood, were thus enabled to make excursions into the country, without infringing upon their course of study; and that others were hereby afforded an opportunity of bringing up any arrears in their notes or reading:—We, therefore, have felt as a grievance the practice lately adopted by the professors, of continuing their prelections EVERY *lawful day.* We wish respectfully to represent that this deprivation of our only holiday is not only adverse to our health and comforts, but that it forces us too frequently to appropriate, either to recreation or study, that day which we feel should be devoted to far different purposes.

In conclusion, we may state, that we have been induced to submit the above memorial to the Commissioners' consideration, from having personally felt the grievances therein complained of. In so doing, however, we have not presumed to suggest any remedy; and being now personally uninterested in the present or future management of the University, we have been actuated only by a wish for the advantage of our successors.

(*Signed by* 79 *Graduates*).

ORDER LXV.—Is a Representative annually returned from the University of Edinburgh to the General Assembly of the Church of Scotland, and of whom is the Meeting, in which such Representative is chosen, composed?

Return by the Senatus Academicus.

The Senatus Academicus returns annually a representative to the Assembly—their own members alone composing the meeting at which such representative is chosen.

For a long period the representative of the University was chosen by the Patrons exclusively. On a remonstrance of the college, the principal and professors were admitted to the meeting of the town-council on the day of the election, and had a vote. In 1723 the Senatus Academicus claimed the exclusive right of election for themselves; and on the case being argued for the Patrons, and also for the Senatus Academicus, before the General Assembly, it was decided, that no commission to a representative of the University should thereafter be received from the town-council. Act 6th April, 1723.

ORDER LXVI.—Are there any Complaints, Applications, or Petitions now before the Principal and Professors, or other Authority of the University of Edinburgh, from the Students, or any of them, praying for the Alteration of any Academical Rules and Regulations, or complaining of any alleged Grievances at the said College? And if so, transmit Copies of the same, and state the Procedure thereon.

Return by the Senatus Academicus.

There are no complaints, applications or petitions now before the principal and professors, or other authority of the said University, from the students, or any of them, praying for the alteration of any academical rules or regulations, or complaining of any alleged grievances at the said college.

Unto the Right Honourable his Majesty's Commissioners for visiting the Universities and Colleges of Scotland, presently holding their visitation of the University and College of Edinburgh.

The Petition of the Students attending the said University, subscribers hereof, for themselves and others;

Humbly Sheweth—

The petitioners trust they will be forgiven for taking the liberty of entreating the attention of your Lordships to certain matters connected with the welfare of the University of Edinburgh, which, so far

885

University of Edinburgh.

Appendix. Order LXVI.

as they can learn, have not been fully brought into view from any other quarter, but in which the petitioners and, as they humbly apprehend, the community at large, have an interest.

I. It is matter of regret to the petitioners,—and they know that it has been considered by the parents and guardians of young men attending the University of Edinburgh, that no adequate accommodation is provided to enable them to attend Divine Service. A very large proportion of the students who resort to this University, are strangers in Edinburgh, and therefore have no seats in the churches of the city. The petitioners do not presume to make any remarks upon the importance of such accommodation to persons at their time of life. They are satisfied that it is sufficient to suggest the deficiency, in order to secure to it the most serious consideration upon the part of your Lordships.

It is true, there is allotted to the petitioners a portion of a gallery in the chapel or church, denominated Lady Yester's. It might be sufficient to say, that the space so set apart is utterly inadequate, in point of extent, to accommodate the numerous students who come from a distance. It must further be added, however, that, as matters have hitherto been conducted, it is unsuitable in other respects, because no care is taken to preserve any sort of police in relation to it. The place is open to intrusion by all and sundry, whether students or not; and, as it is not held to be the duty of any person in authority to give attendance, it almost necessarily happens, in a mixed assemblage of young persons, that irregularities occur, unsuitable to the place and service for which they go thither.

The petitioners very humbly solicit the interference of your Lordships in this matter, either by representation to the Patrons, or in such other form as you may think fit, for the purpose of securing to the various students of theology, medicine, law, and general literature, who resort from a distance to the University, larger and better regulated accommodation for attendance on Divine Service. This may be accomplished, by erecting a chapel for the students in the University, as has been done elsewhere; or by setting apart for them larger accommodation in the High Church, or some other church of the city; or perhaps by setting apart a certain number of seats in the different churches of the city. But the form of accomplishing the object is very humbly left to the better judgment of your Lordships.

II. It is known that the College or University of Edinburgh was founded by King James VI., who, in pursuance of that object, granted, in 1582, a charter to the magistrates of Edinburgh, conveying certain lands, the property of the Crown, called "Kirk-of-Field." This charter was ratified by an Act of Parliament in 1621; and a further grant of land was made to the magistrates of Edinburgh, all for behoof of the College or University.

In consequence of these grants, and with a view, no doubt, to the welfare of those attending the University, the petitioners have been informed that the Patrons did, in ancient times, set apart, or allow to remain unoccupied, a considerable portion of ground, in behalf of the students, for exercise and recreation. This they did, not only with regard to the ground around the college, but also by setting apart for the use of the students a portion of the lands of Bruntsfield. Mention of this will be found in the Records of the Town Council, Vol. IX., p. 140.

Edinburgh has now become a great city, and as the sessions of the University do not consist of short terms, but of one long-continued session annually, and in certain departments the students find it beneficial to continue their attendance nearly ten months, it is evidently of the utmost importance to the preservation of the health of persons at their time of life, that they should not only be permitted, but even invited, by suitable accommodation, to take active exercise, in the open air, at convenient hours.

It is hoped that your Lordships will have the condescension to inquire into the rights of those attending the University (if they any have), in relation to the matter now suggested; and, at all events, that you will make such report, or adopt such measures, as may procure the means of suitable exercise and recreation to the students.

III. Many of the petitioners have at great expense and inconvenience, and some of them not without hazard, come from distant parts of the world to attend the University of Edinburgh. They have been led to do so, in consequence of the high reputation to which this University has attained. The petitioners have a deep interest in the preservation of that reputation. It forms to each of them, in his native place, and in all quarters of the globe to which he may find it necessary to proceed in quest of fortune, a recommendation to trust and employment, that he has had the distinguished advantage of obtaining a learned education at this celebrated University. Any diminution of its reputation, therefore, would prove to the petitioners a private and personal misfortune, tending in so far to diminish his claim to respectability and public confidence. Hence the petitioners may be forgiven for regarding, with extreme apprehension, any proceedings calculated to introduce an apparent change in the form in which the University has been governed since it rose into its extensive celebrity—that is, during the last hundred years.

The charter and statute formerly mentioned contain the following description of the members of the University, for whose behoof grants were made:—"Likeas his Majesty, of his princely and royal "favour, and for good service done to him by the saids provost, baillies, and community of the said "burgh of Edinburgh, and for their farther encouragement in repairing and re-edifying of the said "college, in all time to come to be called King James's College, and as with the advice of the said "estates, has of new given, granted, and disponed to them and their successors, in favours of the said "burgh of Edinburgh, patrons of the said college, and of the rector, regents, bursars, and students "within the same, all liberties, freedoms, immunities, and privileges appertaining to ane free college, "and that in as ample form, and as large manner as any college has or bruiks, within this his Majesty's "realm; and gif neid beis, ordains ane new charter to be expede under his Highness's great seal, for "erecting of said college, with all liberties, privileges, and immunities, quilk any college within this "realm bruiks, joises, or to the same is known to appertain."

The petitioners have been assured, that during the last hundred years at least, all the duties which might naturally be supposed to belong to an officer bearing the appellation of Rector, have been performed by an officer bearing the name of Principal. This last appellation is not employed in the charter, but has come into use, and forms a substitute for the appellation of Rector—certain it is, that from time immemorial, no other person has come forward in the University into public view, to bestow the honours of graduation, or to act in meetings of the regents or professors. What may appear upon the subject in the books of the Patrons, the petitioners do not know, and it does not seem

University of Edinburgh.

Appendix. Order LXVI.

of importance to inquire; because the petitioners are only interested in what has been ostensibly and effectually done.

But the petitioners have been informed, that during a late vacation,—that is to say, in autumn, 1825,—the magistrates of Edinburgh were pleased to enter the gates of the College, and there to perform some sort of pageant or ceremonial, by which it is alleged that they endeavoured to install their then Provost, William Trotter, Esquire, as Rector of the University.

Of this proceeding no previous notification had been given, and being performed in time of vacation, the students were not in attendance. The petitioners are unwilling to say anything apparently disrespectful to the Patrons; but they must take the liberty to say, that it was a proceeding apparently uncalled for, and not consistent with their respectability, that a measure ostensibly tending to introduce a new domination into the University, should be made at a time when the essential members, for whom the University was created and subsists, viz., the students, were necessarily absent, and scattered over the whole of Great Britain and Ireland. To the petitioners it does, with great deference, appear, that the novelty, thus attempted to be introduced, is attended with much hazard to the reputation of the University. It cannot, with safety to that reputation, be rumoured abroad, that a man, not professionally learned, is to be placed at the head of the very learned body which constitutes the Senatus Academicus, or ruling Board of the University, and, for aught the petitioners know, to control that Board. The petitioners submit, that it is not in the power of the Patrons to control the charter which constituted the University: they are merely trustees for the benefit of the students, and when they have elected a Principal, they have appointed the only rector whom it is competent for them to place over the University. If they are entitled to do more, they may send members of their own body to alter or control a system of education; of which, it is not disrespectful to say, that they cannot be expected to be competent judges, and which has been attended with such beneficial results.

At all events, if a rector, as an honorary officer, is to be elected, it is submitted that, as in other Universities, the right of election ought to be considered as vested in the members of the University at large, including the petitioners. The Patrons may be entitled to fix upon the official persons who are to receive salaries, and to act as daily teachers; but they have no title, as mere Patrons, to elect an honorary officer to hold rank, and nothing but rank, in a seat of learning. Such an officer ought evidently to be chosen by the members of the University. In that case the members would endeavour to do themselves honour by the nomination of a person, eminent as a man of letters, as a statesman, or as holding an eminent permanent station in the empire.

The petitioners very humbly trust, that your Lordships will endeavour to protect the University of Edinburgh against any rash or inconsiderate change in its ostensible officers, or in the administration of its affairs; and at all events, if a change of practice by the nomination of honorary office-bearers is to be adopted, that it will be of such a nature as to enable the petitioners to protect themselves and the University, against any apparent diminution of its dignity and illustrious reputation.

May it therefore please your Lordships to take the premises into consideration, and to adopt such measures as may appear requisite, for the relief and protection of the petitioners; and your petitioners shall ever pray, &c.

(*Signed by seventy-three Students of Medicine, and three Students of Law.*)

See also the Petition of Graduates of the University, pp. 203, 204.

Petition of the Medical Students of the University of Edinburgh, on the Subject of Dissection.

To the Right Honourable, Honourable, and Reverend his Majesty's Commissioners for Visiting the Universities and Colleges of Scotland.

The Humble Petition of the Medical Students of the University of Edinburgh;

Humbly Sheweth—

That, according to the established course of education in the medical schools throughout the United Kingdom, a thorough knowledge of anatomy is required. That this knowledge can only be obtained through dissection; and, consequently, it is of the highest importance to the welfare and the proper culture of medical science, that an ample supply of subjects for this purpose should be obtained. From the want of some legislative regulation, and from a variety of other causes, the scarcity of subjects has of late years been so great, as much to impede the progress of the students of medicine in the British schools, so much so that the exorbitant price demanded for them amounts nearly to a prohibition to the study of this essential branch of medical education, and has led to the practice of exhumation, to which so many evils, detrimental both to the feelings and morals of the community, have been ascribed. In consequence of these difficulties, students have, for a considerable length of time past, resorted to Paris and other foreign Universities to complete their anatomical studies, to the detriment of the British schools.

May it therefore please you to take the case of the petitioners into consideration, and to grant such remedies for the evils above mentioned, as to your wisdom may seem meet,—and your petitioners shall ever pray.

(*Signed by* 246 *Medical Students.*)

Note.—This petition received 7th April, 1828.

On the Table of the Commission, but not printed.

(1.) Representation from Dr. Monro, Professor of Anatomy and Surgery in the University of Edinburgh, on the Difficulty of procuring Dead Bodies for Dissection.

(2.) Representation by the Private Lecturers in the various Branches of Medicine in Edinburgh, in relation to the Difficulty of obtaining Dead Bodies for Dissection.

(3.) Minutes of Private Evidence, taken before the Commission, on the Difficulty of obtaining Subjects for Dissection.

Gentlemen examined—Drs. Hope, Monro, Alison, Thomson, Christison, Cullen, Knox, Aitken; Professor Russel; Messrs. Lizars and Syms, Surgeons: all of Edinburgh; Dr. Jeffray and Professor Burns, of Glasgow.

887

University of Edinburgh.

Appendix. Order LXVII.

ORDER LXVII.—Are the Principal, Professors, Masters, and others bearing office in the University of Edinburgh, before their admission to the exercise of their respective functions, required to acknowledge, profess, and subscribe the Confession of Faith, and Formula of the Church of Scotland, as approved and fixed by Act of Parliament, and to swear and subscribe the Oath of Allegiance to his Majesty? and on what occasion, and before whom, is such acknowledgment and subscription made, and such oath taken?

Return by the Senatus Academicus.

By an Act of Parliament, 1707, entitled "Act for securing the Protestant Religion and Presbyterian Church Government," and by the Act 14th of the General Assembly, 1711, it is required, that all masters in colleges and universities, on being admitted to their offices, or on their being allowed to continue in their offices, shall subscribe the Confession of Faith and the Oath of Allegiance; and that this subscription shall take place before the Presbytery in whose bounds the University is situate. But it has not been the uniform practice for professors, appointed by either the Crown or the Patrons, to produce at their admission a certificate of having complied with this qualification.

ORDER LXVIII.—Is there any common table kept in the College of Edinburgh for any Professors, Fellows, Bursars, Poor Scholars, or Students? if so, from what fund is the expense thereof paid, and by whom is such expense regulated and allowed; and are any of the Professors required to preside at the same, and is such duty performed?

Return by the Senatus Academicus.

There is no common table kept in the college for any professors, fellows, bursars, poor scholars, or students.

ORDER LXIX.—Are any private buildings erected, and on what authority or title, within the precincts, belonging to the College of Edinburgh?

Return by the Senatus Academicus.

There are no private buildings erected within the precincts of the college.

The Speculative Society had been allowed by patrons to build a hall for their meetings within the precincts of the old college, at their own expense; and an apartment in lieu of this has been allotted to, and is occupied by them, in the new buildings.

Return by the Town Council.

There are no private buildings erected within the precincts of the said college.

ORDER LXX.—Is it the practice in the University of Edinburgh to appoint, during the lifetime of a Professor, an Assistant and Successor to such Professor? How many such appointments have occurred during the last 100 years? And in these cases specify the names of the Incumbents, and of the persons appointed Assistants and Successors, and of the Parties or Body by whom such appointments have been made; and state what allowance and salaries have been given to such Assistants and Successors.

Return by the Senatus Academicus.

It has not been the practice in this University, under the designation of assistants and successors.

But the following cases of the appointment of Joint Professors, with the benefit of survivancy to either, have taken place.

20th Dec. 1765.	William Wallace, Joint Professor of Scots Law with Mr. Erskine.
24th Dec. 1772.	Mr. A. Dalzell, Joint Professor of Greek with Mr. Hunter.
28th June 1775.	Dugald Stewart, Joint Professor of Mathematics with Mr. M. Stewart. John Hill, Joint Professor of Humanity with Mr. George Stewart.
9th Dec. 1779.	Dr. Andrew Hunter, Joint Professor of Divinity with Dr. R. Hamilton.
25th Mar. 1780.	Ar. Tyler, Joint Professor of Civil History with John Pringle.
21st Aug. 1784.	William Greenfield, Joint Professor of Rhetoric with Dr. Hugh Blair.
21st May 1785.	John Playfair, Joint Professor of Mathematics with Adam Ferguson.
1st Dec. 1786.	James Finlayson, Joint Professor of Logic with Mr. John Bruce.
8th Jan. 1790.	Dr. James Gregory, Joint Professor of the Practice of Medicine with Dr. Cullen.
24th Nov. 1792.	Dr. George Baird, Joint Professor of Hebrew with Dr. James Robertson. John Wilde, Joint Professor of Civil Law with Mr. Robert Dick.
11th Sept. 1793.	Mr. William Moodie, Joint Professor of Hebrew with Dr. James Robertson, in place of Dr. Baird, elected Principal.
14th Nov. 1795.	Dr. Thomas C. Hope, Joint Professor of Chemistry with Dr. Black.
15th Dec. 1798.	Dr. Monro, Junior, Joint Professor of Anatomy with Dr. Monro, Senior.
12th Mar. 1800.	Mr. A. Irving, Joint Professor of Civil Law with Mr. John Wilde.
12th April 1800.	Dr. James Hamilton, Junior, was appointed Joint Professor of Midwifery with his father, Dr. Alexander Hamilton.
30th Mar. 1805.	Mr. John Leslie, Joint Professor of Mathematics with Dr. Adam Ferguson.

8th Nov. 1805.	Mr. George Dunbar, Joint Professor of Greek with Mr. Dalzell.
12th May 1810.	Dr. Thomas Brown, Joint Professor of Moral Philosophy with Mr. Dugald Stewart.
5th Nov. 1819.	Dr. Duncan, Junior, Joint Professor of the Theory of Medicine with Dr. Duncan, Senior.
14th April 1821.	Sir William Hamilton, Joint Professor of Civil History with Fraser Tytler.
20th Dec. 1821.	Dr. Alison, Joint Professor of the Theory of Medicine with Dr. Duncan, Senior, Dr. Duncan, Junior, being elected to the Chair of Materia Medica.

Note.—*Civil Law.*—The Professor of Civil Law can only state what occurred in his own case. On its becoming apparent, from the indisposition of Mr. Wilde, that there was no hope of his being able to discharge the duties of his professorship, the Faculty of Advocates, which enjoys in effect the right of presenting to the class, applied to the Town Council, when it was agreed that another person should be joined with Mr. Wilde in his office. A commission was accordingly made out by the magistrates to him and Mr. Irving as *Joint Professors*. It is dated in March, 1800. Mr. Wilde retains the regular salary of 100*l.*; but it was agreed upon by the magistrates and the Faculty of Advocates, that Mr. Irving should have a salary to the same amount, of the which the Faculty pays 70*l.* and the City 30*l.* annually.

Mr. Tytler and Sir William Hamilton are Joint Professors of Civil History, by election of the Faculty of Advocates. The salary of the Class, which is 100*l.* per annum, and the fees are both possessed by Sir William Hamilton, and no emolument whatever is retained by Mr. Tytler.

Dr. Duncan, Senior, and Dr. Alison now hold a joint commission appointing them Professors of the Institutions of Medicine, *ad vitam aut culpam*, and upon the death of either of them, the survivor becomes sole Professor of the Institutions.

On the Table of the Commission, but not printed.

(1.)—Act of Council, allowing Mr. Cleghorn to take charge of Dr. Pringle's Class during the Session. 27th March, 1745.

(2.)—Act of Council, regarding Dr. Home and Mr. Fergusson teaching Institutes of Medicine and Experimental Philosophy. 27th October, 1773.

(3.)—Act of Council, regarding the request of Professor Fergusson to appoint substitutes during his absence. 16th February, 1774.

(4.)—Act of Council, regarding the appointing of Teachers for the Moral Philosophy and Practice of Medicine Classes, in absence of the Professors. 26th October, 1774.

(5.)—Act of Council, appointing Mr. Dugald Stewart to teach Professor Fergusson's Class during his absence. 4th November, 1778.

(6.)—Act of Council, prohibiting any person from lecturing and teaching in the College, without permission from the Magistrates and Council. 6th November, 1779.

(7.)—Act of Council, obliging the Professors to give punctual attendance in teaching their Classes. 5th April, 1780.

(8.)—Act of Council, regarding Professor Home's Class being taught by Dr. J. Home. 29th March, 1797.

(9.)—Act of Council, regarding appointing an Assistant to Professor Alexander Hamilton, Professor of Midwifery. 5th December, 1798.

(10.)—Act of Council, regarding the appointment of an Assistant to Professor Robinson. 2nd November, 1803.

(11.)—Act of Council, regarding the arrangements in consequence of Professor Playfair going on the Continent. 5th July, 1816.

(12.)—Act of Council, regarding an Assistant to Professor Gregory. 4th November, 1818.

(13.)—Act of Council, regarding Professor Hamilton appointing his own Assistant. 29th May, 1822.

(14.)—Minutes of the Town Council of Edinburgh, in regard to the Civil Law Class of the University of Edinburgh. 13th June, 1827.

Order LXXI.—Are the qualifications required by the Charters, Statutes, or Laws of the University of Edinburgh, as a condition of the nomination of Professors, invariably observed in Practice?

Return by the Senatus Academicus.

The Senatus Academicus are not aware of any specific qualification being required by any charter, statute, or law of the college, as a condition of the nomination of a professor.

809

University of Edinburgh.

Appendix. Order LXXII.

Order LXXII.—Has any person been appointed professor in the University of Edinburgh under 21 years of age?

Return by the Senatus Academicus.

In the early times of the University, it was common to elect professors or Regents, as they were then called, at the age of 19, 20, and 21 years. It is not in the knowledge of the Senatus Academicus that any professor has been nominated in modern times under 21 years, except Mr. Dugald Stewart, who had even then attracted the attention, and acquired the confidence of the literary public, and whose subsequent celebrity has so completely justified his nomination.

Order LXXIII.—Are any lands, or other estate, and revenues attached to any Professorship in the College of Edinburgh? Is there any house attached to the office of Principal, or any Professorship; and is the same inspected, and its state of repair examined, from time to time? or, if any lands or house were formerly granted and mortified for the use of the Principal or any Professor, when and for what purposes, and by what authority or transaction have the same been diverted?

Return by the Senatus Academicus.

Houses are attached to the office of Principal and Professor of Divinity, of Oriental Languages, Humanity, Greek, and Mathematics.

As there are particular circumstances as to official houses in the case of the Principal and Professor of Divinity, and as these seem to them to require more detail than could properly be placed in the general answer to this query, they propose to lay for themselves a separate representation before the Royal Commissioners as to the peculiarities alluded to*.

It may be stated by them in respect to the other professors above specified—that their predecessors possessed, in virtue of their offices, dwelling-houses in the old college buildings;—that in Mr. Adams' original plan, houses were allotted to all of them in the then proposed new buildings, which plan was adopted and sanctioned by the trustees under the subscription;—that the trustees, in conjunction with the Patrons, did, upon the old buildings being demolished, resolve that 35*l.* per annum should be given to the other professors as allowance for house-rent. These allowances they accepted, though low even at the time, as a temporary compensation, expecting houses to be soon prepared for them in the new buildings, as above-mentioned. But the trustees, under subsequent Parliamentary grants, adopted a plan for the college buildings different from Mr. Adams' and more limited; and as they found more class-rooms required than had been marked in Mr. Adams' plan, they (with the approbation of the Senatus Academicus, and with the concurrence of the professors having right to houses, and expecting from the *bonâ fide* understanding of all parties that they were to be freely and fairly remunerated) converted the spaces intended for houses to other purposes;—that the principal and professors soon after this applied to the trustees, in consequence of having resigned their right to the houses intended for them in the college, to have rents allotted to them suitable to their station in society, and the changing value of money;—that the trustees remitted the consideration of their claims to a committee of their number, who were pleased, on the 25th January, 1817, to draw up the following report:—"The committee having duly considered the foregoing claims, have to regret that in their opinion the powers of the Commissioners do not extend to grant relief to the learned and respectable persons whose representations had been submitted to them, and this the committee the more regret, as the allowances appear to be very inadequate compensations to the principal and professors for having been deprived of their houses in the college. (Signed) John Marjoribanks. Of which report the meeting approves." That the principal and professors also laid their claim before the Honourable Patrons of the University, either to have houses suitable to their situations, or an adequate sum in lieu of them, but have not obtained any redress from the Honourable Patrons. They therefore trust that the Royal Commissioners will take their claim into consideration, and may be pleased to adopt such means as their wisdom may judge competent and proper for providing a suitable sum in name of house-rent in every case where a house is not furnished.

Return by the Town-Council.

26 September, 1826.

In the returns made to the previous requisitions, it will be found that some mortifications have been made for particular professorships, and particularly for the Professor of Divinity, and that the annual produce has since been fully appropriated.

The late General Reid bequeathed a large sum, "in the *first* place, for establishing and endowing a professorship of music in the College and University of Edinburgh; and in the *next* place for the purpose also," after completing such endowments as are after mentioned in his settlement, "in making additions to the library of the said University in such way and manner as the principal and professors thereof for the time being shall, in their discretion, think most fit and proper." But this bequest does not fall into the college till the death of a lady now far advanced in years, and, as mentioned above, is left specially to the charge of the principal and professors.

That part of this requisition which relates to houses attached to the principal or professors, and their inspection and repair, seems to have been already answered. The lord provost is not aware that any land or houses granted or mortified have been diverted from the purposes for which they were destined.

Carlyle Bell, *Conjunct Clerk.*

University of Edinburgh.

Appendix, Order LXXIV.

ORDER LXXIV.—Are the provisions of the charters, statutes, or Acts of Visitation, with respect to the residence and attendance of the Professors, duly observed? and in what manner is leave of absence granted, or in what manner and by what authority is non-attendance noticed and corrected?

Return by the Senatus Academicus.

The provisions of charters, statutes, and acts of visitations, as far as those are known to us, are duly observed.

Leave of absence, for any short period during a course, is granted by the Senatus Academicus. Leave of absence during a whole course, is applied for by a professor to both the Patrons and the Senatus Academicus. But of this last, not more than two instances have occurred during the last half century.

ORDER LXXV.—Are there any rights of patronage of parish churches, or other church endowment vested in, and attached to, the University or College of Edinburgh? and by whom and in what manner are such rights of patronage exercised?

Return by the Senatus Academicus.

The original copies of the royal grants in favour of the college have never been submitted to the Senatus, and are not accurately known to them. It may, however, be mentioned, that by charter of King James the Sixth, for the foundation and erection of the college (14th April, 1582) as quoted by Maitland in his history, p. 357-8-9, and 360, the lands, fruits, possessions, and duties of the provostry and church *Beatæ Mariæ in Campis*, were assigned for college purposes. King James the Sixth, by his letters patent (April 4th, 1584) granted the parsonage and vicarage of Currie, together with the teinds or tythes, trusts, rents, manse, and church lands anciently called the archdeaconry of Lothian, to the college. And as a further encouragement to the said college, the said King James, granted by his charter (May 29, 1594), to it, the teind-sheaves of the lands of Westbarns, Ardrisipyies, King's Muir, Drumrack, Mumstes, Kipp, Nakedfield, Gariston, and Ryndwells, with the croft or field of Carril (Crail), all in the parish of Carril (Crail) and county of Fife. Further, also, by the golden charter (15th March, 1603), confirming former grants, it specifies the church of Dumbarney, Pottie, and Moncrieff, and grants them to the city for the college.

The patronage of Dumbarney has been sold by the Patrons, but the Senatus does not know to what funds the proceeds are applied.

Their intromissions as to Curry and other grants of teind-sheaves of Westbarns, &c. are unknown to the University.

The Senatus was never consulted in the appointment of a minister to any of the livings.

The patronage of the parish of Wemyss, in Fife, is vested in the Town-Council, but, whether for college purposes or not is not, known to the Senatus.

RETURN BY THE ROYAL COLLEGE OF SURGEONS, EDINBURGH, TO THE COMMISSION.

College of Surgeons, Edinburgh.

A Return to the Order "for a Copy of the Regulations of the Royal College of Surgeons, Edinburgh for granting a Diploma in Surgery."

Letter from the President of the Royal College of Surgeons, to the Right Honourable the Earl of Rosebery.

Edinburgh, November 10, 1826.

10 November, 1826.

My Lord,—In compliance with the desire expressed by your Lordship, in the name of the Commissioners for visiting the Universities and Colleges of Scotland, to have a copy of the Regulations of the Royal College of Surgeons of Edinburgh, for granting a Diploma in Surgery, I have now he honour of transmitting several copies of these Regulations, as well as copies of the Laws of the College.

I avail myself of this opportunity to state, that the College of Surgeons have, for a long series of years, been invested with the privilege of teaching Pharmacy and Surgery in Edinburgh, and of granting diplomas in these branches. Previously to 1794, the qualifications for candidates for diplomas were ascertained by examination only; but about that time the College began to provide that candidates, before being taken on trial, should have gone through a certin course of study; and down to the present year, when the regulations now submitted to the Commissioners were enacted, the College have endeavoured, from time to time, to improve and extend the education and qualifications required of those on whom they conferred diplomas, as rapidly as the circumstances of the country seemed to them to admit. The College have had the satisfaction to find, that in proportion to their endeavours to extend the education, and to ascertain, by more strict examination, the acquirements of those who apply for diplomas in surgery, the diploma has risen in the estimation of the public, and of the medical profession; while at the same time, the candidates have progressively increased in number, and improved in qualification. This statement will be illustrated by the enclosed return of the number of those who have applied for diplomas during different periods.

The diploma of this College is now received and accredited by the Army Medical Board, the Navy Board, and by the Court of Directors of the Honourable East India Company; while in the British colonies, and in various other quarters of the globe, it is considered as a privilege for general practice, equivalent to the Degree of Doctor in Medicine. The diploma was also held as a qualification for the general practice of medicine throughout the United Kingdom, till the year 1815, when the Society of Apothecaries of London obtained an Act of Parliament without the knowledge of the College, by which, though they require, in the candidates for their diploma, education and qualifications comparatively imperfect, they have the exclusive monopoly of licensing all the general practitioners in England and Wales—a monopoly which the College of Surgeons consider to be highly injurious to the profession and to the public.

891

University of Edinburgh.

College of Surgeons, Edinburgh.

10 November, 1826.

Among other means for the improvement of professional education, and the advancement of medical science, the College of Surgeons, for some years, have been anxiously engaged in the formation of a Museum of healthy and morbid anatomy, and have, in the prosecution of this important object, expended nearly six thousand pounds from their own limited funds. Your Lordship and the Commissioners will observe, that, by the laws of the College, this Museum is freely opened for the inspection and instruction of students of medicine, and of the whole medical profession, though the College have to regret their inability, from want of funds, to give to this now extensive collection, and to the valuable Museum lately bequeathed to them by Dr. Barclay, such accommodation as might ensure its full usefulness to the profession.

The College of Surgeons also, from a conviction of the necessity of surgery being fully and regularly taught as a separate branch of medicine, instituted, in 1804, a Professorship of Surgery, which, it is generally acknowledged, has been attended with most beneficial results, not only in attracting the attention of students to so necessary a department of the healing art, but in encouraging and exciting other teachers to undertake similar courses of lectures.

From the important department of medical education which falls under the cognizance and superintendence of the Royal College of Surgeons, they cannot but feel a deep interest in the investigation in which your Lordship and the Commissioners are at present engaged, and are most desirous to afford every information in their power to forward its object. Your Lordship and the Commissioners will perceive, from the terms in which several branches of education, not absolutely required of candidates for diplomas, are recommended to their attention, that the College are sensible that their regulations are still capable of considerable improvement; and I can assure your Lordship and the Commissioners, that the College will be ready to pay the utmost attention to any suggestions for the improvement of Medical and Surgical Education, and the advancement of Science, which your Lordship and the Commissioners may feel it to be your duty to offer, as the fruits of your important labours.

I trust your Lordship and the Commissioners will pardon this intrusion on your valuable time, and I have the honour to be, my Lord, with the utmost respect, your Lordship's most obedient humble servant,

(Signed) DAVID MACLAGAN, M.D.
President of the Royal College of Surgeons of Edinburgh.

To the Right Hon. the Earl of Rosebery,
Chairman of the Commissioners for visiting the Universities and Colleges of Scotland.

University of Edinburgh.

College of Surgeons, Edinburgh.

17 November, 1826.

Letter from William Wood, Esq. Fellow of the Royal College of Surgeons, Edinburgh, to the Right Honourable Lord Binning.

87, *George-street*, 17*th November*, 1826.

My Lord,—In compliance with the wish of the Royal Commissioners for visiting the Universities and Colleges of Scotland, I have the honour of transmitting copies of all the regulations enacted by the Royal College of Surgeons of Edinburgh, in regard to the education of candidates for their diploma, from the year 1790 to the present time.

I have the honour also of enclosing an exact list of the number of gentlemen who have received diplomas in each year, during the same period.

I have the honour to be your most obedient humble servant,

(Signed) WILLIAM WOOD.

The Right Honourable Lord Binning.

Statement of the Regulations enacted by the Royal College of Surgeons of Edinburgh, to be observed by Candidates for their Diploma, and of the Alterations that have been made from time to time thereon.

13 September, 1794. The first regulation made by the College respecting the education of candidates for their diploma, was enacted on this date. It is as follows:—"That no person shall be admitted a candidate for a full diploma, unless he produce certificates of his having studied at least two sessions in the University of Edinburgh, or some other school of medicine; and that no person shall be admitted a candidate for a mate's diploma, unless he produce a certificate of his having studied one session in the University of Edinburgh, or some other school of medicine."

1 August, 1798. This law not being found sufficiently precise, it was of this date enacted,—"That no person shall be admitted a candidate for a surgeon's diploma, who has not studied in a school of medicine during two winter sessions, and has not heard lectures on anatomy, with demonstrations of the parts of a body on a human subject, and who has not attended the practice of surgery in a public hospital for one year. It is further enacted, that no person shall obtain a surgeon's diploma who does not possess a competent knowledge of surgical pharmacy. It is further enacted, that no person shall be admitted a candidate for a mate's diploma who has not studied one winter session of some school of medicine; and it is hereby declared, that the town school of medicine is defined to mean—1mo, The public lectures of teachers of medicine in Universities; 2do, The lectures, anatomical dissections, and demonstrations of teachers of medicine and surgery in London, being members of the College of Physicians, or of the Company of Surgeons of that city; 3tio, Public hospitals for the cure of sick and hurt persons in London, Edinburgh, Glasgow, and Dublin; 4to, The private lectures on medical subjects, anatomical dissections and demonstrations in Dublin, of members of the College of Physicians and College of Surgeons of that city; and, lastly, The private lectures on medical subjects, anatomical dissections and demonstrations, of members of the Royal College of Surgeons of Edinburgh."

As a proof that these regulations had been attended with a beneficial effect, and that the diploma of the College had in consequence risen in public estimation, it may be mentioned, that in 1799 the diploma of this College was admitted by the Directors of the East India Company as a sufficient qualification for appointments in the Company's land and sea service; and in 1803 it was admitted by the Army Medical Board as a sufficient qualification for the situation of hospital mates, without the necessity of any farther examination.

1804. As the foregoing regulations, though found to be extremely beneficial, as far as they went, were thought to be capable of some improvements, the College, of this date, enacted the following regulations:—"A candidate for a surgeon's diploma, or for a certificate to act as a surgeon in the African slave trade, must either have served an apprenticeship to a surgeon of three or more years, or have attended the practice of medicine or surgery in a public hospital for one year at least; he must also have attended lectures or demonstrations in anatomy and surgery, and lectures on the practice of medicine, in any university of reputation, for two or more years: or lectures and demonstrations on these subjects by any practitioner of reputation, who is a member of the College of Physicians or Surgeons of London, Dublin, or Edinburgh, or of any other respectable college, for the same period.

"A candidate for a certificate to act as a surgeon's assistant in the army, or as mate in the royal navy, must either have served an apprenticeship to a surgeon of three or more years, or have attended the practice of medicine and surgery for one year in a public hospital; and also lectures and demonstrations, for one or more years, on anatomy, surgery, and medicine, as stated above."

3 February, 1806 Some farther improvements having been suggested, the College of this date, enacted the following regulations:—"The College enact and declare, that a candidate for a surgeon's diploma, having served an apprenticeship to a regular practitioner of three or more years, must also have attended lectures and demonstrations on *anatomy* and *surgery*; and lectures on the *practice of medicine*, and on chemistry, in any university of reputation, for *two* or *more years*; or lectures and demonstrations on these subjects by any teacher of reputation, who is a member of the College of Physicians of London, Dublin, Edinburgh, or other respectable college. But if the candidate have not served an apprenticeship he cannot be taken on trial till he has attended the above lectures and demonstrations for at least *three years*; and also lectures on *materia medica* and *pharmacy*, and the practice of *medicine* and *surgery* in a *public hospital*, for one year. 2ndly, That a candidate for a certificate to act as surgeon in the African slave trade, or as assistant-surgeon in the army or navy, having served an apprenticeship of three or more years, must also have attended lectures and demonstrations, for one or more years, in anatomy and surgery, chemistry and medicine, as above stated. But if he have not served an apprenticeship, he is required to have attended the practice of medicine and surgery in a public hospital for one year, lectures and demonstations, as above stated, for two years; besides a course of lectures in materia medica and pharmacy."

1808. In the course of this year, the whole regulations of the College, respecting the education of candidates for their diploma, underwent a complete revision, and were printed and extensively circulated for the information of students. After a preamble, in which the necessity of a liberal education, and particularly of a competent knowledge of the Latin language, is duly enforced, and in which the advantages of an apprenticeship to a regular practitioner are fully pointed out, the following regulations were made with regard to the course of study, which, it will be observed, are considerably more full and precise than those previously enacted:—

"Candidates for surgical diplomas must have followed their studies in some university of reputa-

University of Edinburgh.

College of Surgeons, Edinburgh.

tion, or under teachers who are members of the Colleges of Physicians or Surgeons of London, Dublin or Edinburgh. Every candidate who has not served an apprenticeship of three or more years to a regular practitioner, must produce certificates of his having attended the instructions of the above designed teachers for a period of *three or more years*, in the course of which time he must have attended lectures on *anatomy, chemistry, institutions* or *theory of medicine, practice of medicine, principles* and *practice of surgery, clinical surgery, midwifery, materia medica.*

"The candidate must likewise have attended *a public hospital* for *at least one year.*

"As young gentlemen who are apprentices to regular practitioners possess many opportunities of improvement from which other students are precluded, the Royal College have abridged the duration and extent of the academical studies requisite to obtain a diploma, and have therefore enacted, that

"Every candidate who has served an apprenticeship to a regular practitioner, of three or more years, must produce certificates of his having attended the instructions of the above designed teachers for a period of *two or more years*, during which time he must have attended lectures on *anatomy, chemistry, institutions* or *theory of medicine, practice of medicine, principles* and *practice of surgery, clinical surgery, midwifery.* The candidate must likewise have attended *a public hospital* for *at least one year.*"

As a proof that these regulations had been attended in a considerable degree with the good effects which the College expected, it may be mentioned, that of this date, they received the following communication from the gentlemen at the head of the Army Medical Department:—"Gentlemen, His Royal Highness the Commander-in-Chief having been pleased to approve of the diploma from the Royal College of Surgeons in Edinburgh being received as a qualification in that branch of the profession for regimental commission, in addition to what was formerly allowed at the instance of candidates asking employment in the medical department of the army as hospital mates, and as a test of surgical ability, that the diploma from *London, Edinburgh* or *Dublin, shall be held as equivalent,*—we hasten to make the same known to you, for the information of such students as may think of making the army their pursuit." April, 1813.

As the College entertained no doubt that this approbation of their diploma, and its being thus placed on a level with that of the College of Surgeons of London, was owing to the increased reputation which it had acquired in consequence of the regulations made by them respecting the course of study to be pursued by those who applied for it, the College resolved to continue its endeavours to improve the education of candidates by introducing, from time to time, such further alterations as might appear to them conducive to this purpose; and, with this view they enacted, of this date, that "every candidate must be able to translate with accuracy a part of a medical Latin author, which shall be presented to him for that purpose at the time of his examination." 15 May, 1813.

Of this date the College came to the resolution to do away the distinction made between apprentices and other students, in so far as to require that they should attend a course of *materia medica*; and of this date, it was further enacted, that in future, *all candidates for diplomas, whether apprentices or not*, should, before being taken on trial, have attended lectures for at least *three winter sessions.* In justice, however, to those apprentices who had already entered into indentures, or might still do so, on the faith of the former regulations, it was declared that these new regulations should not apply to apprentices whose indentures commenced before the 1st of January, 1823. 14 September, 1822. 22 October, 1822.

In the course of this year, it was enacted, that in addition to the course of study formerly established, "All candidates coming forward for examination on or subsequent to the month of March, 1826, will further be required to produce a certificate of their having attended a course of practical anatomy, of at least three months' duration." 1825.

In the same year regulations were made, appointing that the tickets for the winter courses of lectures must be taken out from the different professors or lecturers on or before the 15th of December, and that tickets taken out after that date would not be received as qualifying for a diploma; and in order that due effect might be given to this enactment, a regulation was made, appointing that all persons following their studies in Edinburgh, with a view of applying for the diploma of this College, should register their names and the classes they attended, in a book to be kept for the purpose in the museum of the College.

In the course of the present year the College have introduced still further improvements, and the course of study required by them now stands as follows:—

Anatomy	2 courses.	Practice of Medicine . . .	1 course.
Chemistry	1 do.	Principles and Practice of Surgery	1 do.
Materia Medica . . .	1 do.	Midwifery	1 do.
Institutions or Theory of Medicine	1 do.	Practical Anatomy . .	1 do.

"The candidate must likewise have attended *a public hospital* for at least one year, with *a course of clinical surgery*, during the period of his hospital attendance.

"Though, by the present regulations, it is not made imperative that candidates for surgical diplomas should have attended a course of lectures on clinical medicine, the College earnestly recommend all candidates to avail themselves of this valuable mode of practical instruction, as well as of that which, on similar principles, is derived from attendance at dispensaries.

"The College would also impress on Candidates for surgical diplomas, the advantages to be obtained from a course of practical chemistry and pharmacy, which seems to bear the same important relation to the science of chemistry, as dissection or practical anatomy does to the science of anatomy."

In the regulations now published, a copy of which is laid before the Honourable Commissioners, the College have endeavoured to encourage, as far as possible, a liberal course of general education, and with this view, in addition to the Latin language, a due knowledge of which is still enforced as formerly, they have recommended the study of *Greek* and *modern languages*, of the elementary parts of *mathematics* and *natural philosophy*, of *natural history* and *botany*.

Fees.

The fee exacted from those who received the diploma of the College, has undergone very little alteration for upwards of thirty years. For a very long period the fee for a full diploma has been 100 merks Scots (5*l.* 11*s.* 1⅓*d.*) which all students and others, not being apprentices of Fellows of the College, were appointed to lodge with the Treasurer before examination. The apprentices of fellows received their diploma without payment of any fee to the College, or any other expense besides the fees to the clerk and officer, to be afterwards mentioned.

University of Edinburgh.

College of Surgeons, Edinburgh.

15 May, 1795

By the law, as it stood in 1793, every apprentice on receiving a diploma, was obliged to grant a promissory note for 100 merks Scots, payable to the treasurer for the time being, if he should at any time thereafter settle and practice as a surgeon within the three Lothians, Fife, Peebles, Selkirk, Roxburgh, or Berwick; which promissory note contained a declaration that he was not entitled to practise surgery within the city of Edinburgh and its liberties, without entering with the College. It would appear that this regulation continued to be acted upon for several years afterwards, as, of this date, an entry of the following tenor appears in the records of the College:—"The President reported, that for some time past the apprentices of the members who have received diplomas, have granted obligations upon four-shilling stamps instead of promissory notes upon sixpenny stamps, as in consequence of a late decision of the Court of Session, upon the subject of bills and promissory notes, the clerk did not consider it safe for the College to take these obligations in the form of promissory notes. The meeting are of opinion that the clerk should continue to take obligations from the apprentices, but that these should be written on sixpenny stamps, as there is little chance of payment being disputed upon that ground."

No entry appears upon the records formally repealing this law; but in 1804 a remit was made to a committee to revise the whole laws of the College, with a view to their being reprinted; when various alterations were made upon them, and amongst others, this law respecting apprentices granting promissory notes was then omitted. Nothing is stated as to the reason of doing so; but it may be conjectured that one reason might be, that in consequence of the decision before referred to, a promissory note, such as was formerly in use to be taken, was not an effectual obligation, and could not be put in force so as to enable the College to recover the contents, and that this could only be done by a regular bond, written upon the stamp required by law, thereby occasioning an expense from which no adequate benefit was likely to result, no instance having occurred for many years in which the College had insisted on fulfilment of the obligation. Accordingly it does not appear that any such obligation has been exacted since 1804.

11 November, 1824.

Of this date the College enacted and declared, that the fee payable by students on obtaining a diploma, shall in future be 6*l.*, instead of 5*l.* 11*s.* 1½*d.*, as formerly.

The fees to the clerk in 1793, for every diploma to an apprentice or student were fixed at 14*s.* 10*d.*, including the expense of vellum, ribbon, seal of the College appended thereto, and a tin box to hold the diploma, all of which were furnished by the clerk. This was considered as equal to a fee of 10*s.* 6*d.* to the clerk, 4*s.* 4*d.* being allowed as the expense of vellum, box, and ribbon. The clerk's fee remains unaltered, but the other attendant expenses have been increased from time to time, owing to the increased expense of the vellum, and the printing of the diploma, and some improvements that have been made upon the form of the box. The whole fee payable to the clerk is now made 1*l.*; of which it is understood that he receives 10*s.* 6*d.*, the other 9*s.* 6*d.* going for the expense of vellum, wax, ribbon, and diploma box.

The fee payable to the officer in 1793 for each diploma was 2*s.* 6*d.*; in 1804 it was raised to 3*s.*, at which it continues at present; but if he take charge of getting the diploma signed by all the examinators (12 in number), which of course is attended with considerable trouble, he is entitled to receive 2*s.* more, making his whole fee 5*s.*

Out of the fees received by them the College defray the expense of the ordinary examinations. These take place on the first and third Tuesday of every month, and if there are more candidates than can be examined at one sitting, the examinators sit from day to day, until all the candidates are examined. The examinators receive at each sitting, from the College, the sum of two guineas, which is equally divided among the examiners present, and in general three, or at most four, candidates are examined at one sederunt.

During the year from Lammas 1825 to ditto 1826, there were in all 181 persons examined. Ten of those were apprentices, and of course paid no fee to the College: of the remainder, 29 were remitted to their studies, and received back their fees, leaving of those who received diplomas and paid fees, 142. The sums paid to the examinators for their trouble in examining the whole of the above candidates, amounted in all to 157*l.* 10*s.*; and as this is divided among the twelve examinators, it makes the sum received by each only 13*l.* 2*s.* 6*d.*

Note of the Numbers of Diplomas granted by the Royal College of Surgeons of Edinburgh, for each Year from 1790 to the present time.

July, 1829.

uniformly anxious to evince to the public their desire to adopt measures calculated to improve the education of those who are hereafter to have the care of the health of the community. Accordingly, in the present regulations, the object of the College has been, to determine the extent and duration of the course of study, which, in the present advanced state of medical science, they consider necessary to enable the student to enter on the duties of his profession with credit to himself, and advantage to the public.

The Royal College are also fully aware, how much the success of the student, in the prosecution of the various branches of medical science, must depend upon the direction of his early studies; and, under this conviction, they wish earnestly to impress on the minds of parents and others, how important it is to the interest of the public, and to the future comfort and respectability of the practitioner, that all who apply to the study of surgery, should have the benefit of a liberal education. In addition, therefore, to the postive regulations on that head now adopted by the College, they are inclined to hope, that medical practitioners in every part of the country will be disposed to second their endeavours, to encourage the young men who are placed under their care, or who may apply to them for advice, in the study of the *Latin*, *Greek*, and *modern languages*, and of the elements of *mathematics* and *natural philosophy*, as the best preparation for their entering upon a course of medical and surgical education; and they strongly recommend to their own fellows, and to other practitioners, not to take any young man as an apprentice, until he shall have gone through this preliminary course.

While they thus recommend in the strongest manner an attention to these preliminary branches of instruction, the College wish to remind the public, that the profession of surgery is a practical art, which cannot be acquired without continued personal intercourse with the sick; and this, they believe, can best be obtained by serving an apprenticeship to a regular practitioner, under whose inspection young men may not only prosccute their studies with the greatest advantage, bnt have frequent opportunities of being conversant with the sick, and of assisting in preparing and applying the means used for their recovery. The College farther hope, that every master will direct his apprentices as to the classes which they ought to attend, and the books which they ought to read; that he will occasionally subject them to examination, to ascertain their progress in the different branches of their education; and that he will explain the nature of the cases which they are attending under his superintendence.

The College have marked, with much satisfaction, the gradually increasing knowledge and attainments of those who present themselves for examination at Surgeons' Hall: and they are inclined to hope, that the observance of the regulations now enacted will have a tendency to maintain, and to increase, the anxiety of candidates to raise their acquirements to the highest attainable standard. The College are at the same time aware, that no regulations which they can adopt will effect this desirable end, unless they are seconded by the influence of parents and guardians, and by the strenuous exertions of those who are devoting themselves to the study of the arduous and responsible profession of surgery.

On this account, the College have now directed their regulations to be printed and circulated as widely as possible, in order that all persons interested may be informed of the nature and extent of the course of study required of those who mean to become candidates for the diploma of the College; and that the public at large may be enabled to estimate the extent of professional attainments which the possession of that diploma necessarily implies.

Schools of Medicine, Courses of Lectures, Qualification of Teachers, &c.

Every candidate for a surgical diploma must have followed his studies in a University; or established school of medicine; or in a provincial school specially recognised by the College, and which shall conform to such laws and regulations as have been, or may hereafter be enacted.

Under the title, Established School of Medicine, are comprehended all places in this country where diplomas in surgery are granted, and such foreign schools as are acknowledged by the constituted authorities of the countries where they exist.

No provincial school shall be recognised where there is not a general hospital, containing at least eighty beds, at which regular medical and surgical attendance is given, and where there are not established course of lectures on anatomy and chemistry.

No course of lectures given at a provincial school shall be recognised, unless it be of the same extent and duration as the course required on the same subject in Edinburgh.

The extent and period of study, allowed to be gone through at a provincial school, will be regulated by the means and facility of study which the College receive evidence of its affording; but, in all cases, at least two winter, or one winter and two summer sessions of the course of study required for a diploma, must be passed at a University, or at one of the established schools of medicine.

In Edinburgh, the lectures to be attended as part of the surgical curriculum shall be delivered by Professors in the University, or Fellows of the Royal College of Physicians or Surgeons there: and elsewhere, by Professors of Universities, or by Fellows of the Royal College of Physicians of Edinburgh, and Fellows or Licentiates of the Royal Colleges of Physicians of London and Dublin, by Fellows of the Royal Colleges of Surgeons of Edinburgh, London, and Dublin, and of the Faculty of Physicians and Surgeons of Glasgow; and by persons holding a medical degree or surgical diploma, whose courses of lectures have been recognised by the College on special application.

No tickets of a Professor or Lecturer shall be recognised, who teaches more than two of the branches required by the College; but anatomy, with practical anatomy; and chemistry, with practical chemistry, shall each, in reference to this regulation, be considered as one branch.

Course of Study.

Every candidate for the diploma of the Royal College, either previously to, or during his medical education, must have received regular instructions in the *elements of mathematics;* and must have attended a course of *mechanical philosophy* of at least *three* months' duration, delivered by a Professor of that branch in a University, a lecturer in a public institution, or a teacher specially recognised by the College.

The candidate must have attended the following separate and distinct courses of lectures during a period of at least *four* winter sessions, or *three* winter and *three* summer sessions, provided that in each summer session he shall have attended one or more of the courses prescribed or recommended by the College, exclusive of hospital attendance, and also provided that the summer courses of lectures shall not commence till after the conclusion of the winter courses.

University of Edinburgh.

College of Surgeons, Edinburgh.

July 1829.

		Duration at least
Anatomy,	2 Courses,	Six Months each.
Practical Anatomy,	1 Course, or 2 Courses,	Six Months; Three Months each.
Chemistry,	1 Course,	Six Months.
Practical Chemistry,	1 Do.	Three Months.
The number of Pupils in each Class being limited to 25.		
Materia Medica and Pharmacy,	1 Do.	Six Months.
Institutions of Medicine, or Physiology,	1 Do.	Six Months.
Practice of Medicine,	1 Do.	Six Months.
Clinical Medicine,	1 Do. or 2 Courses,	Six Months; Three Months each,
During the period of attendance at the Hospital where they are delivered.		
Principles and Practice of Surgery,	2 Courses,	Six Months.
Or Do.	1 Course,	Six Months.
and Military Surgery,*	1 Do.	
Clinical Surgery,	1 Do. or 2 Courses,	Six Months. Three Months each.
During the period of attendance at the Hospital where they are delivered.		
Midwifery, and Diseases of Women and Children,	1 Course,	Three Months.

With the exception of the courses of clinical medicine, clinical surgery, and military surgery, in which lectures are not delivered daily, the six months' courses, delivered in Edinburgh by Fellows of the College, or others, are understood to consist of five lectures per week for a period of not less than five months.

Two *London* courses of three months each, on any of the above subjects, shall be taken as equivalent to one six months' course.

The candidate must also have attended for *eighteen* months a public general hospital, containing at least eighty beds; OR for *twelve* months such a *Public General Hospital*, and *six* months a *Medical* or *Surgical Hospital* or *Dispensary*, recognised by the college on special application.

The candidate shall be required, in addition to the tickets or proof of entry to the different classes, to produce *certificates* of his having attended these classes, from the respective professors or lecturers; and in the case of practical anatomy, the certificate must express that the candidate has been actually engaged in the dissection of the human body, under the personal superintendence of the professor or teacher, during the course of his attendance.

The candidate, at the commencement of his examination, will be required to translate into English some portion of a Latin author.

The following order of study is recommended as a guide to the student, though not absolutely enjoined:—

First Year,—Anatomy—Chemistry—Mechanical Philosophy, if not previously attended.
Second Year,—Anatomy—Practical Anatomy—Institutions of Medicine or Physiology—Surgery—Materia Medica and Pharmacy, either in this or the third year.
Third Year,—Practice of Physic—Clinical Surgery—Practical Chemistry—Hospital.
Fourth Year,—Surgery, or Military Surgery—Midwifery, and Diseases of Women and Children—Clinical Medicine—Hospital.

Besides the course of lectures on the different branches of medicine required by the College, they strongly recommend to students to avail themselves of the opportunities they may possess of attending lectures on *Medical Jurisprudence*, *Botany*, *Natural History*, *Comparative Anatomy*, *and Pathological Anatomy*.

The duration and course of study to be required of apprentices whose indentures commenced before 1st January, 1823, are still regulated by the laws in force previously to that date: The course of study of apprentices and others, who entered upon their indentures, or their medical studies generally, after that date, and before 1st August, 1829, will be determined by the rules in force within this period. The present regulations, as to *endurance and course of study*, shall take effect as to all who enter upon their medical education *after* the last-mentioned date.

The regulations as to *lecturers*, *teachers*, &c. &c. are to take effect *immediately*.

Registration.

1. A book shall be kept in the hall of the College, for the registration, at stated times, of all medical students who may apply.

2. The registration shall be conducted by the conservator of the museum, or by a substitute for whom he shall be responsible. He shall enter in separate columns, 1st, The name of each individual; 2nd, The medical classes, hospitals, and dispensaries, attended by each during the current season; 3rd, The names of his teachers. He shall register such only as apply personally to him, shall examine all the tickets produced by each individual, and shall not register any classes for which tickets are not produced.

3. Each student shall pay annually, on his first registration for the year, the sum of two shillings and sixpence.

4. Each student, upon being registered, shall be provided with a ticket of admission to the Museum of the Royal College, on certain hours of certain days of the week, to be specified in the ticket.

5. The book shall be closed for the registration of the winter classes on the 30th November in each year; and of all other classes at the end of the fourth week from their commencement.

6. On the day of the election of the office-bearers of the Royal College, the president shall appoint a committee of three, whose duty it shall be to fix the days and hours when the register is to be open for each set of inscriptions; to give due intimation to the students of these days and hours; and to

* The course of military surgery must be delivered by a Professor of that branch in a University; or by a lecturer, who, in addition to the other required qualifications, has served in the medical department of the army or navy; and the course of lectures must be of at least six months' duration, lectures being delivered at least thrice per week.

897

University of Edinburgh.

College of Surgeons, Edinburgh.

July, 1829.

report to the college, at the first meeting after each set of inscriptions is closed, as to the number and correctness of these inscriptions.

7. When a student is prevented by sickness, or other unavoidable causes, from complying with the above regulations, he shall, *as soon as the case admits*, present a statement of the circumstances, with proper evidence, to the conservator, to be laid by him before the committee, who shall report their opinion to the college; and if the application is sustained, the individual so applying shall be enrolled in the usual manner.

8. All students whose classes are thus registered, shall be entitled to receive from the conservator a certificate of their course of study, attested by his signature.

9. A certificate from the album of the University, signed by the proper officer, shall be received as a sufficient proof that the student presenting it has entered the classes taught there at the proper period of the course; but it shall also be in the option of students to register such classes in the manner described above, and to have them included in the same general certificate with those of the other teachers sanctioned by the college.

10. Such certificates shall be required from all candidates for surgical diplomas, in regard to that part of their medical education which they may have received at Edinburgh.

Examination.

The days of examination are the first and third Tuesdays of every month.

No candidate will be admitted to examination before the termination of his last year's course of study.

Applications for examination must be made to the president of the Royal College, two days previously to the day of examination.

Every candidate for a diploma, on applying to the president for examination, is required to present his tickets and certificates, and also a written statement containing his name, age, and country, and a list of all the classes, hospitals, and dispensaries attended during each session of his study.

If the candidate be an apprentice for three years, he must also produce his discharged indenture. If for five years, he may apply at the end of four, without losing any privilege, provided he has written permission from his master, and that the date of his indenture, and whether it be for the freedom or not, is certified at the bottom of the written permission by the secretary. All apprentices must also state the names of their masters, the dates of their indentures, and length of time for which they are bound.

Printed forms will be furnished, by the officer of the college, to each applicant, which he will fill up and sign before applying to the president, who will give him a letter authorizing the examinators to take him on trial.

The fees payable to the funds of the college must be lodged, before examination, in the hands of the treasurer, who will certify this upon the president's letter, after inspecting and being satisfied with the certificates.

The fees will be returned to unsuccessful candidates, whose names will be concealed.

Unsuccessful candidates will be remitted to their studies for a period, not less than three months, to be determined by the judgment of the examinators.

The president, if he judge it proper, can order a meeting on any day, at the request of a candidate; but in that case the candidate must pay two guineas in addition to the customary fees; and this money is not returned to him in the event of his being rejected.

Fees payable to the Funds of the Royal College.

For a diploma the sum of six pounds sterling.

Apprentices of fellows of the Royal College, bound for the freedom, pay no fees to its funds for diplomas or certificates; their other apprentices pay one pound eleven shillings and sixpence.

Candidates for the certificate of qualification to act as assistant surgeon in the navy, who have not paid for any previous qualification, the sum of four guineas.

Assistant surgeons who have already obtained certificates from the college, applying for certificates for the qualification of full surgeon, three guineas.

Assistant surgeons in the navy, having previously obtained the diploma of the college, when candidates for the situation of full surgeon, the sum of two guineas.

A surgeon in the navy, having obtained certificates from the college, may receive a diploma on paying the usual fees to the secretary and officer.

An assistant surgeon in the navy, having obtained his certificate from the college, may receive a diploma on paying the difference of expense betwixt that of the certificate and of the diploma, and the usual fees to the secretary and officer.

Fees payable to the Secretary.

For a diploma to a student or apprentice, ten shillings and sixpence sterling; besides nine shillings and sixpence as the expense of vellum, &c. for the diploma, and box wherein it is contained.

For a certificate to surgeon or assistant-surgeon in the royal navy, ten shillings and sixpence.

Fees payable to the Officer.

For a diploma or certificate, three shillings; or if he takes charge of getting the diploma or certificate signed by all the examinators, five shillings sterling.

By authority of the Royal College,

(Signed) William Wood, President.

On the Table of the Commission.

Printed Laws of the Royal College of Surgeons, Edinburgh, presented 10th November, 1826.

University of Edinburgh.

College of Surgeons, Dublin.

23 October, 1829.

ROYAL COLLEGE OF SURGEONS IN IRELAND.

Extract from the By-Laws of the College, relating to the Examination of Candidates for Letters Testimonial. Published by order of the Court of Censors.

I. Candidates shall be admitted to an examination for letters testimonial as apprentices, and shall be entitled to the privileges reserved for apprentices, if they shall have been duly registered as such on the college books.

II. Every apprentice so registered shall be admitted to an examination for letters testimonial, if he shall have laid before the Court of Censors the following documents:—

1. A certificate signed by the president or vice-president and two of the censors, that he has passed an examination as to his acquaintance with the Greek and Latin languages in the following books, viz., the works of Sallust, the first six books of the Æneid of Virgil, the Satires and Epistles of Horace, the Greek Testament, the Dialogues of Lucian, selected by Walker, and the first four books of Homer's Iliad; or a certificate from his tutor that he has entered as a student into Trinity College.
2. His indenture of apprenticeship, with a certificate signed by the member or licentiate to whom he has been indented, that he has fully and perfectly served such apprenticeship for the full term of five years.
3. A receipt, showing that he has lodged to the credit of the president, and for the use of the college, in the Bank of Ireland, the sum of thirty guineas.
4. Certificates of attendance on hospital practice, on lectures on anatomy and physiology, surgery, the practice of medicine, chemistry, materia medica, midwifery, and medical jurisprudence, and of the performance of dissections, and attendance on anatomical demonstration.
5. A Thesis, Essay, or Dissertation, in Latin or English, fairly engrossed according to a prescribed form, upon any of the following subjects:—Anatomy, physiology, surgery, practice of medicine, chemistry, materia medica, midwifery, or medical jurisprudence; or, in place of such Dissertation, a series of cases collected in the hospital, in which the candidate has attended, illustrated by comments or observations.

III. Every candidate who has not served an apprenticeship, shall be admitted to an examination for letters testimonial, if he shall have attended lectures or hospitals for three winter seasons, at least, in Dublin, London, Glasgow, or Edinburgh; and if he shall have laid before the Court of Censors the following documents:—

1. A certificate signed by the president or vice-president, and two at least of the censors, that he has passed the examination as to his proficiency in the Greek and Latin languages, as prescribed for the registered apprentices; or a certificate from his tutor that he has entered Trinity College.
2. A receipt, showing that he has lodged to the credit of the president, and for the use of the college, in the Bank of Ireland, the sum of sixty guineas.
3. Certificates showing that he has been engaged in the study of his profession in some hospital or school of surgery or medicine, for the full term of six years.
4. Certificates of attendance on a surgical hospital containing at least fifty patients, during five winter seasons of six months, or three years, if such attendance shall not have been perfected during the winter seasons.
5. Certificates of attendance on three courses of lectures on anatomy and physiology, three courses of lectures on the theory and practice of surgery, and the performance of three courses of dissections, accompanied by demonstrations; also certificates of attendance on two courses of lectures on chemistry, one course of lectures on chemistry, one course of lectures on materia medica, one course of lectures on the practice of medicine, one course of lectures on midwifery, and one course of lectures on medical jurisprudence.
6. A Thesis, or series of cases, is enjoined for registered pupils.

IV. No certificate shall be received for attendance on lectures delivered in Ireland, unless from teachers in schools permitting the visitation of the Court of Censors, and receiving their sanction.

V. No certificates shall be received from teachers who deliver lectures upon more than one distinct subject, as hitherto allotted to professors in colleges and universities. This regulation shall not, however, exclude the certificates of a teacher who delivers separate, perfect, and distinct courses on anatomy and physiology, and on the theory and practice of surgery.

VI. No certificate shall be received for attendance on lectures on anatomy and physiology, unless such lectures shall have been delivered upon at least five days in each week of the winter session, between the 1st of October and the 1st of May; nor on the theory and practice of surgery, on chemistry, practice of medicine, materia medica, or midwifery, unless delivered within the same period on at least three days in each week. The two courses delivered in London, and there called autumn and spring courses, shall, however, be considered equivalent to one winter course of six months, as delivered in Dublin, and elsewhere.

VII. Every candidate, presenting certificates of attendance on lectures or hospitals previous to his examination for letters testimonial, shall be liable to be examined respecting their authenticity; and if he shall refuse to answer thereupon, or if it shall appear from his answers, or from any other information obtained by the Court of Censors, that he has not attended such hospital or lectures with regularity, or according to the regulations laid down by the college, he shall not be admitted to an examination for one year; and should it be proved that he has presented a forged certificate, or a certificate obtained by causing some person to personate him, and attend for him, he shall never be examined; and if such fraud shall be discovered after the candidate shall have obtained letters testimonial, he shall be expelled, and such letters shall be withdrawn, and shall be given up by him to the college, on demand in writing signed by the secretary, or in default thereof, proceedings shall be had against him on his bond.

VIII. The examination of every candidate for letters testimonial shall be held in the presence of the members and licentiates of the colleges, or such of them as choose to attend, and the secretary shall, by regular summonses, give at least four days' notice of such examination.

IX. Every candidate for letters testimonial shall be solemnly examined on two several days in anatomy and physiology, in the theory and practice of surgery and medicine, in chemistry, and in

899

University of Edinburgh.

College of Surgeons, Dublin.

23 October, 1829.

materia medica. Candidates shall be expected to perform such surgical operations, or make such dissections on the dead body, as the Court of Censors may require; or they shall be called upon to explain any anatomical preparation which the examiner may lay before them.

X. In case a candidate shall be rejected, and shall appeal to the Court of Assistants, such appeal, stating that he considers himself aggrieved by the decision of the Court of Censors, shall be lodged within eight days from the date of rejection, and the candidate shall be submitted to examination within fourteen days from the date of such rejection. The examination before the Court of Assistants shall be conducted in every respect as the examination before the Court of Censors.

XI. A candidate for letters testimonial, who has been rejected, shall not be admitted to another examination, except upon his appeal, in a less time than one year from such rejection, and he shall then be required to lay before the Court satisfactory evidence of his attention and opportunities of improvement, subsequent to the period of his rejection.

XII. The Court of Censors shall be authorized to examine candidates for letters testimonial, who have not been educated in strict conformity with the above by-laws, but who shall produce evidence of having received a professional education equivalent to that required by the college; provided such candidates apply for an examination, and lodge their certificates and other necessary documents with the secretary previous to the 1st of May, 1830. The Court shall also be authorized to receive certificates issued by competent teachers, previous to the 1st of May, 1829, notwithstanding any regulation to the contrary in the above by-laws.

Midwifery Diploma.

XIII. The mark distinguishing practitioners in Midwifery in the printed lists of the college, shall not be affixed to the name of any member or licentiate of the college subsequent to the 1st of November, 1829, unless he shall have obtained the license or diploma of the college authorizing him to practise that branch of surgery as herein after specified.

XIV. A Court of Examiners, consisting of a chairman, deputy chairman, and six members, shall be elected by ballot, on the first Monday in January in each year, to examine such members or licentiates as become candidates for the diploma in midwifery; any four of which Court, with the chairman or deputy chairman, shall be competent to hold such examination.

XV. Every candidate for the diploma in midwifery shall be admitted to an examination, if he shall have laid before the Court the following documents:—

1. A receipt, showing that he has lodged to the credit of the president, and for the use of the college, in the Bank of Ireland, the sum of five guineas.
2. Certificates of attendance on two courses of lectures on midwifery, of six months' duration each.
3. A certificate of attendance on an established lying-in hospital for a period of at least six months, or a certificate that he has been a resident pupil for six months in some established dispensary for lying-in women and diseases of women and children, such hospital or dispensary to be approved of and sanctioned by the Court.
4. Satisfactory evidence that he has conducted thirty labour cases at least.

XVI. Candidates for the midwifery diploma shall be examined on the anatomy and physiology of the female generative system, the theory and practice of midwifery, and on the diseases of women and children; and, if approved of by the Court, shall receive a license or diploma to that effect, to which the college seal should be affixed. Should a candidate be rejected, he shall not be again admitted to an examination until a period of three months shall have elapsed, and he shall then be obliged to produce satisfactory evidence of his having been engaged in the study of this branch of surgery, subsequent to such rejection.

WILLIAM AUCHINLECK, *President.*

October 23, 1829.

DUTCH SYSTEM OF EDUCATION,

Transmitted by Alexander Thomson, Esq., Dean of Faculty of Marischal College, Aberdeen,* August, 1825.

Dutch System of Education.

Part I.—LATIN SCHOOLS.

August, 1825.

Latin schools may be considered as the first or lowest step in academical instruction.

No boy is to be admited to a Latin school, until he has shown, by a previous examination, that he is well instructed in reading, writing, arithmetic, the principles of the Dutch language, and the elements of geography and history; but when an examination of a boy on the five last would be a hardship, the curators have power to dispense with it.

This examination is to be held half-yearly, immediately before the commencement of each half-yearly course, by a commission named for the purpose by the municipal authorities.

The commission gives to each boy, whom they find qualified, a written certificate, on producing which to the rector of the school, he is enrolled as a scholar.

In places where an inferior school is established by authority, in place of the above examination, a written testimonial of the scholar's proficiency, in the subjects required, from the director or head master of such school, will be received.

* The following is a copy of Mr. Thomson's Letter, addressed to the Commissioners.—

"Zurich, 16th July, 1827.

"My Lords and Gentlemen,—Along with this I take the liberty of presenting to you an account of the System of Education pursued in the Universities of Holland. The Marischal University did me the honour, last year, to elect me their Dean of Faculty, and from this circumstance my attention was particularly directed to the system of instruction. Since I came abroad, I have availed myself of various opportunities of acquiring information on the systems followed in different countries. The papers now sent are an abridged Translation of the Royal Decree by which the three Universities of Holland are regulated. The Appendix is extracted from a written communication from one of the Professors of Utrecht, in answer to questions which I sent to him.

"It was at first intended only for the private information of some friends; but as I think it may not be uninteresting to you, at the present time, to see an authentic account of the Dutch System, I have resolved to transmit it to you.

"I have the honour to be, very respectfully, your obedient servant,

(Signed) "ALEXANDER THOMSON."

University of Edinburgh.

Dutch System of Education.

August, 1825.

In these schools, the boys are to be taught the Latin language, and the more advanced Greek; but the latter, not so as to interfere with other more necessary instruction.

The other subjects to be taught in these schools, are the elements of mathematics, ancient and modern geography, ancient and modern history, and Greek and Roman mythology.

The schools are to meet every day of the week, except vacation time, Sundays, and feast-days: in the morning from 9 to 12, and afternoon of three winter months, from 2 to 4; and the rest of the year from 2 to 5. On Wednesdays and Saturdays throughout the year, there is no school after 12. The vacations are—a long one in summer of six weeks, at the period found to be most convenient; Christmas week, and the week of each half-yearly examination and promotion.

The hours from 9 to 11, and from 2 to 4, shall be always devoted to the ancient languages; from 11 to 12, and from 4 to 5, to the other subjects mentioned above.

The Latin schools are divided into six classes (unless where circumstances make the curators' order otherwise).

The rector teaches the highest class, the conrector the next, and the other four are taught by *præceptores* (ushers).

The rector, and, in his absence or sickness, the conrector, superintends the whole.

In small towns, two or more classes may be placed under the charge of one person.

No one is allowed to be even a *præceptor* in a Latin school, without having obtained the degree of candidate in literature. In towns, whose population exceeds 20,000, both rector and conrector must be doctors in literature. In towns below 20,000, the rector must be a doctor in literature.

Where necessary, the curators may appoint assistant-masters to teach mathematics, geography, history, &c., with proper salaries.

These assistants receive no part of the school-fees paid by the scholars, which are solely for behoof of the rector, conrector, and *præceptores*. The lessons are to be so arranged in each class, that all the scholars shall be usefully employed at the same time.

The cultivation of the memory is to be particularly attended to; and lessons are to be prescribed, to be learned by heart, out of school; but nothing is to be prescribed to be got by heart, which has not been thoroughly explained.

The Home Secretary of State has a general charge of the Latin school; and is to be assisted in this department by an officer, with the title of Commissary of Latin Schools.

Where, from the small number of teachers, or other local circumstances, all the regulations about classes, &c., cannot be observed, they are still to be kept in view, and fulfilled as far as possible. In all towns where Latin schools are established, the magistrates are to appoint a committee of at least three persons (called curators), who have the superintendence of the schools, and especially to see that this decree be observed.

This committee, along with the magistrates, fix the salaries of the rector, conrector, and other teachers; and also the fees to be paid by the scholars, according to local circumstances.

The curators shall pay all the attention they can, both to the moral conduct and the progress in learning of the scholars; and twice a-year shall hold a solemn examination, at which the teachers shall produce to them a report of the diligence, behaviour, and progress of each scholar; and also the number of faults committed by each in his themes and translations; and scholars shall also be examined, *vivâ voce* on the different subjects of study.

After this examination, the curators promote those who are fit, from lower to higher classes; and to those in the highest class, whom they find fit for the University, they shall give their discharge from school, and an honourable certificate in the Latin language.

No one shall be thus discharged from the highest or rector's class, without having been at least one year in it.

Scholars from abroad, who wish to pass over the lower classes, and join the higher at once, must be examined by the committee mentioned in previous page, to ascertain whether they be fit to do so or not.

The curators have the charge of the public declaration of all promotions, and the public distribution of prizes to the best scholars.

Those who leave school with an honourable certificate, and also obtain one of the first prizes, shall give public proof of their proficiency, by delivering a Latin oration, or reciting a Latin poem of their own composition.

The curators shall, after each half-yearly examination, make up, and transmit to the Secretary of State for the Home Department, a report on the state of the school.

Part II.—Athenæa.

Athenæa are established in each province of the United Netherlands, except Utrecht, Gröningen, and Drenthe.

The object of these institutions is to diffuse learning, taste, &c. &c., as widely as possible, and to supply, as far as can be, the place of a university-education to those young men whose circumstances will not allow them to spare the time required at a university.

They are fixed in the following places:—

1. For Guelderland, at Harderwyk;
2. „ Holland, „ Amsterdam;
3. „ Zealand, „ Middleburg;
4. For Friesland, at Franeker;
5. „ Overyssel, „ Deventer;
6. „ Brabant, „ Breda.

The expenses at Harderwyk and Franeker are paid by the nation; at the other places, by the treasuries of the towns in which they are situated.

At Harderwyk and Franeker, the Athenæum is managed by curators appointed by the King. The King also chooses the professors, from a list transmitted by the curators to the Secretary of State.

In the other Athenæa, the curators and professors are appointed by the magistrates (subject to the King's approbation).

The ordinary number of professors in an Athenæum is five:—One for theology; one law; one abstract and natural philosophy, and mathematics; one Greek and Latin literature, and history; and one Oriental literature.

In the Athenæa situated in the capitals of provinces, there is also a professor of the Dutch language and literature.

At Harderwyk and Franeker (on account of the celebrated universities formerly established there), there shall be also two professors to prepare students for obtaining medical degrees: one of whom

901

University of Edinburgh.

Dutch System of Education.

August, 1825.

shall give instruction in strictly medical studies, particularly anatomy and physiology; the other in the kindred studies of botany, chemistry, and pharmacy.

In the other Athenæa, no instructions in medicine, or the studies connected with it, are to be given at the expense of the Athenæum; but if a medical school be at any rate established in the town, for surgeons, apothecaries, and midwives, the teachers in it shall be admitted as professors in the Athenæum, to give elementary instructions in the science.

In no case whatever are students of medicine exempted from at least two years' attendance at a university.

The instructions which are to be given in the Athenæa, in preparation for obtaining academical degrees, are the following:—

I. Divinity.

1st, A Course of Church History; 2nd, of Biblical Exegesis; 3rd, of Natural Theology.

II. Law.

1st, A Course on Institutes; 2nd, on Pandects; 3rd, Natural Law; 4th, Modern Civil Law.

III. Medicine.

1st, A Course of Anatomy; 2nd, Physiology.

IV. Mathematical and Physical Sciences.

1st, A Course of Mathematics; 2nd, of Physics: 3rd, Botany; 4th, Chemistry, Pharmacy, and Materia Medica.

V. Abstract Philosophy and Literature.

1st, A Course of Logic and Metaphysics; 2nd, Roman Literature; 3rd, Roman Antiquities; 4th, Greek Literature; 5th, Oriental Literature and Antiquities, Elements of Arabic; 7th, History; and 8th, Dutch Language and Literature (when this professorship is established).

The professors are at liberty to extend their instructions still farther; but young men who are candidates for the degree of Doctor in any Faculty, are not, on account of such extension, exempt from attendance on a university, as follows:—for Theology and Medicine, at least two years; and for the other faculties, at least one year.

An exception from this rule is made, as to one class of law students, viz., those who have no intention of making law their profession, but have applied to the study of it for three years, and wish to obtain a degree as the reward of their labours. They may obtain the diploma of Doctor of Laws, without attending university lectures, provided they are able to pass the examination required.—(See under the head "Degrees.")

All students from the Athenæa may obtain university degrees without university attendance, provided they have made such progress as to enable them to encounter the severer trial of a public promotion.

In the Athenæa, the following subjects are taught in the Dutch language:—Modern Law, Mathematics, Physics, Chemistry, Natural History, Dutch History, and Dutch Literature. Where medical instruction is combined with a town medical school, it also must be given in Dutch. The other subjects are taught in Latin. Theminimum allowance to a professor, in an Athenæum, is 1600 florins—(133*l.* 6*s.* 8*d.*)

Part III.—Universities.

The Dutch Universities are now reduced to three, viz. Leyden, Utretch, Groningen.

They are distinguished from the Athenæa by the nature of the instruction given; by the right of conferring degrees; by the rights of the professors, the rights of the students, academical discipline, greater support from the state, &c. &c.

Chap. I.—Instruction.

All the branches of instruction are divided into five faculties:

I. Divinity—to prepare students for becoming Ministers of the Reformed Church.
II. Law.
III. Medicine.
IV. Mathematical and Physical Science.
V. Abstract Philosophy and Literature.

The precedence of the Faculties changes annually; that Faculty ranking first to which the rector for the time belongs.

In order to give the benefit of similar academical instruction to young men destined to the ministry in the Roman Catholic, Lutheran, Baptist, and Remonstrant Churches, particular Seminaria are established for each.

In each of the five Faculties, instruction is to be given in every science belonging to it.

In each science, an introductory sketch must be given of all the branches of it, and the best authorities on each; together with a prospectus of the plan of arranging these branches, or the principle of them, in an academical course (called Encyclopedia and Methodology.) A short history of each science or branch must also be given.

Each professor is confined to his own Faculty, from which he derives his title; and the division of the different branches among the professors of a Faculty, is entrusted to the curators; who, however, must always take care that none of the branches enumerated below be left vacant.

Professors may give lectures on subjects belonging to their own Faculty, although not specially appointed thereto.

The subjects which shall be taught every year, at each university, in separate classes, are:—

I. Faculty of Theology.

1st, Natural Theology; * 2nd, Church History; 3rd, Principles of Biblical Exegesis; 4th, Dogmatics; 5th, Christian Morality; 6th, Homiletics and Pastoral Duties.

N.B.—The Professors of Theology shall also preach during the session (term time) of college as *Concionatores Academici.*

* This Course is also considered a part of the Faculty of Abstract Philosophy and Literature.

University of Edinburgh.

Dutch System of Education.

August, 1825.

II. Faculty of Law.

1st, Institutes; 2nd, Pandects; 3rd, Natural Law; 4th, Law of Nations (National and International Law; 5th, Modern Civil Law; 6th, Modern Criminal Law; and, in addition to these, there shall be at Leyden—7th, Political History of Europe; 8th, Statistics; 9th, Diplomatics.

III. Faculty of Medicine.

1st, Anatomy; 2nd, Physiology; 3rd, Pathology; 4th, Practice of Medicine; 5th, Pharmacy and Materia Medica; 6th, Surgery; 7th, Midwifery; 8th, Dietetics, Political and Forensic Medicine.

IV. Faculty of Mathematical and Physical Sciences.

1st, Elementary Mathematics; 2nd, Higher Mathematics; 3rd, Hydrostatics and Hydrodynamics, and subjects connected therewith; 4th, Experimental Physics; 5th, Mathematical Physics; 6th, Physical Astronomy; 7th, Mathematical Astronomy, conjoined with instruction in Astronomical Observations, and Navigation; 8th, Chemistry, Theoretical and Practical; 9th, Botany, and Physiology of Plants; 10th, Mineralogy and Zoology, joined with Comparative Anatomy; 11th, Rural Economy.

V. Faculty of Abstract Philosophy and Literature.

1st, Logic; 2nd, Metaphysics; 3rd, History of Philosophy; 4th, Ethics; 5th, Roman Literature; 6th, Roman Antiquities; 7th, Greek Literature; 8th, Greek Antiquities; 9th, Hebrew Literature; 10th, Arabic, Syriac, and Chaldee Literature; 11th, Jewish Antiquities; 12th, Universal History; 13th, Dutch History; 14th, Dutch Literature and Eloquence.

(Thus at Leyden there are annually forty-eight courses of lectures delivered, and at Utrecht and Gröningen, forty-five.)

In general, the professors settle among themselves what courses each is to deliver; but if they do not agree, the curators decide. They may also transfer a professor from one Faculty to another, if found advantageous, (as chemistry and botany to the medical Faculty, &c.)

No professor can be a member of two Faculties at the same time.

The professors are invariably to use the Latin language in their classes, except in the classes of Dutch Literature and Rural Economy. In case of necessity, the curators have power to dispense with this regulation. (This has been done in the case of the Professor of Experimental Philosophy at Utrecht, who, after using Latin for ten years, found it impossible to explain steam-engines, and the like, with half the precision in Latin, that he could do in Dutch.) The number of professors in each university, and in each Faculty, is as follows:—

Professors in	Leyden.	Utrecht.	Gröningen.
Facultas Theologica	4	3	3
Facultas Juridica	4	3	3
Facultas Medica	4	3	3
Facultas Mathematica et Physica	4	4	4
Facultas Philosophiæ Theoreticæ, and Literarum Humanarum	5	5	5
Total Professors in each	21	18	18

This number is to be increased by the King, when the interests of learning require it. The above list merely includes the *Professores Ordinarii.*

In Leyden, when required, Professores Extraordinarii may be appointed, to assist in carrying on the university courses in any or all the Faculties. (At present, there are several of these Professores Extraordinarii.) This appointment, however, gives no right to succeed to a vacant chair in the Faculty; on the contrary, the Professores Extraordinarii are never appointed Ordinarii, unless in very special circumstances. In Utrecht and Gröningen, Professores Extraordinarii are only appointed, when permanent sickness, or any other lasting impediment, prevents an ordinary professor from discharging his duties.

Each science which makes the subject of a separate course, must be concluded in the course of one year.

The professors are strictly enjoined to encourage, as much as possible, all academical exercises among the students, in debating and declaiming societies, &c.

The professors are obliged to examine their students once a-week, or oftener, to ascertain how far they are attending to, and understanding their instructions.

The lectures are private, and may be given in the professors' houses, or elsewhere, as they find convenient.

No one is admitted to the proper faculty, lectures on divinity, law or medicine, without having, for the two first, obtained the Degree of *Candidate* in *Literature*, and for the last that of *Candidate* in *Mathematics* and *Physics*. From this, however, are excepted the lectures on anatomy, osteology, and physiology, which in order to extend the period of the medical course, may be attended by medical students at the same time with their preparatory studies.

No fixed rules are laid down as to the order of study, but no one is admitted to the final examination, by which he obtains a rank in society, without certificates that, after obtaining the preparatory degree,* he has studied, for theology, law, philosophy, and literature, three years;—for medicine, four years, (but, in the case of his having attended the classes of anatomy, osteology, and physiology, along with his preparatory studies, one year less).

When a special degree is desired (such as are mentioned below, as Doctor Artis Obstetriciæ), then certificates of attendance on the lectures, &c. connected with it, are required.

The foregoing regulations do not apply to those who declare themselves prepared to undergo the more severe ordeal of a public promotion. They and foreigners are not required to give an account either of the time or place of their studies.

The curators of each University are to take such measures as they find best for procuring instruction to the students in modern anguages, drawing, riding, and fencing, by appointing lecturers, teachers, &c.

CHAP. II.—Academical Degrees.

In each Faculty there shall be two degrees,—that of *Candidate*, and that of *Doctor*. Neither of these degrees shall be obtainable by any one, without passing the examinations prescribed below, with this exception, that a University may confer on a man of celebrity, the title of Doctor, as a mark of

* As to these preparatory degrees, see pages 223, 224.

903

University of Edinburgh.

Dutch System of Education.

August, 1825.

respect; the Faculty, in which the degree is to be conferred, having previously obtained the consent of the whole Senatus, in a meeting to be held for the purpose.

The degree of Candidate gives no right out of College: (with a few special exceptions, mentioned below). It is solely an academical degree, preparatory to that of Doctor, and is merely certified by an extract from the faculty records.

It shall be obtained by those who follow the regular academical course (unless in special circumstances), at least one year before they can ask the degree of Doctor. Strangers, and one class of Doctors in Law, mentioned below, are excepted.

The degree of Doctor gives right, without further examination, to exercise the functions expressed in the diploma.

The nature of the examination varies, according as it is for the degree of Candidate, or that of Doctor.

I.—Theological Examinations.

1. Candidate.

1st. An Examination on Natural Theology, Church History, and the general Doctrines of Christianity; 2nd. Certificates of profitable attendance on the Lectures on Metaphysics, Moral Philosophy (Ethics), and Oriental Literature, besides Hebrew.

2. Doctor.

1st. An Examination on Dogmatics, Christian Morality, the Principles of Exegesis, and Pastoral Duties; 2nd. An Exegesis of one passage of the Old, and one of the New Testament, prescribed by the Faculty, after successfully passing the former Examination. The trial shall take place the day after the examination; 3rd. Certificates of profitable attendance at the Lectures on Experimental Physics, Physical Astronomy, Rural Economy, and above all, Dutch Style and Eloquence.

II.—Law Examinations.

1. Candidate.

1st. An Examination on the Institutes, and Roman Law; 2nd. Certificates of attendance on the Lectures on the Encyclopædia of Law, History of Law, History of Holland, and Natural Law.

2. Doctor.

There are two different degrees of Doctor of Law—

1st. Doctoratus Juris Romani et Hodierni, for those who give the necessary proofs of their proficiency, and depend on this title to enable to hold situations in the country, for which it is required; 2nd. The simple Doctoratus Juris, for foreigners, and those who merely wish a literary title.

I. For the simple degree of Doctor Juris,—nothing is required, after passing the examination as candidate, except writing a Thesis, on one Law of the Pandects, and one of the Codex, and defending it against the impuning of the professors.

II. Doctor Juris Romani et Hodierni.—1st. An Examination on Modern, Civil and Criminal Law; 2nd. A Dissertation on two passages, one of Roman and one of Modern Law: (this is an Exegesis like that for Doctor Theologiæ); 3rd. Certificates of attendance at the Lectures on the Pandects, the Law of Nations, Statistics of Holland, Political History of Europe, Political Economy, Legal and Forensic Medicine, and Dutch Style and Eloquence, or as many of these as are taught in the University from which the degree is required.

III.—Medical Examinations.

1. Candidate.

1st. An Examination on Anatomy, Physiology, Pathology, Pharmacy, and Materia Medica; 2nd. An Anatomical Demonstration; 3rd. Certificates of attendance on the Lectures on Natural History, and Comparative Anatomy.

2. Doctor.

1st. An examination on the Practice of Medicine, and on the Theory of Surgery and Midwifery; 2nd, An Exposition of two Aphorisms of Hippocrates, to be prescribed in the same way as the Exegesis for Doctor Theologiæ; 3rd. Certificates of profitable attendance on the Lectures on Dietetics, Political and Forensic Medicine, and on Clinical Lectures.

When any one, who has obtained the degree of Doctor of Medicine, intends in future to confine himself solely to Surgery, Pharmacy, or Midwifery, he may also obtain the special degree of Doctor in any of these branches. In this case, he must undergo the following additional trials:—

1. Chirurgiæ Doctor.

A particular Theoretical Examination on Surgery; and the performance of a prescribed operation on a dead body.

2. Artis Obstetriciæ Doctor.

A particular Examination on Midwifery, and the performance of some Deliveries on the *Models*.

He must also produce attestations of having, either in a Clinical Institution, or under the eye of an experienced Obstetricator, performed what the Faculty think a sufficient number of actual deliveries.

3. Artis Pharmaceuticæ Doctor.

A particular Examination on Chemistry and Pharmacy, and the performance of an experiment prescribed, either in the one or the other.

IV.—Examinations in Mathematics and Physics.

1. Candidate.

This Examination varies, according to whether it is intended as preparatory to the degree of Doctor in Mathematics and Physics, or as preparatory to the commencement of Medical Studies:—

1. If preparatory to the degree of Doctor in Mathematics, &c.

1st. An Examination on Mathematics, Experimental Physics, Astronomy, and the Elements of

University of Edinburgh.

Dutch System of Education.

August, 1825.

Botany, and Natural History; 2nd, Certificates of profitable attendance on Latin and Greek Literature and Logic;

II. If preparatory to Medical Studies,

1st. An Examination of Mathematics, Physics, Botany, and the Elements of Chemistry; 2nd. Certificates on profitable attendance at Lectures on Latin and Greek Literature and Logic.

2. Doctor.

1st. An Examination on Practical Mathematics, Mathematical Physics, Mathematical Astronomy, Practical Chemistry, and Geology; 2nd. The solution of one Mathematical, and one Physical Problem; 3rd. Certificates of profitable attendance at the Lectures on Metaphysics, and History of Philosophy.

This degree gives the title of Matheseos Magister, Philosophiæ Naturalis Doctor.

---

v. Examinations in Literature.

1. Candidate.

This Examination varies, like the preceding, in Mathematics:—

I. If it be preparatory to the degree of Doctor in Literature, it is as follows:—

1st. An Examination on Greek and Latin Languages, on Greek and Latin Antiquities, on Universal History and Logic; 2nd. Certificates of profitable attendance on the Lectures on Mathematics, Experimental Physics, and Dutch Literature.

II. If it be preparatory to the commencement of the study of Theology, then it is,—

1st. An Examination on Dutch, Greek, Latin, and Hebrew Literature, and on Greek and Jewish Antiquities; 2nd. Certificates of profitable attendance on Mathematics, Logic, and Universal History.

III. If preparatory to the study of Law, it is,—

1st. An Examination on Greek and Latin, Roman Antiquities, and Universal History; 2nd. Certificates of profitable attendance on Mathematics and Logic.

2. Doctor.

1st. An Examination on the higher Greek and Latin Classics, Ancient History, Metaphysics, and the history of Ancient Philosophy; 2nd. The translation of two difficult passages, or the putting to rights and criticising of two corrupt passages, one from a Greek, and the other from a Latin author; 3rd. Certificates of profitable attendance on the Lectures on the Institutes, the History of Roman Law, Dutch History, and Physical Astronomy.

This degree gives the title of Philosophiæ Theoreticæ Magister, Literarum Humaniorum Doctor.

These examinations are to take place in presence of all the members of the Faculty, who are to be summoned for the purpose, and the absent fined. The Latin language only is to be used, unless by special permission of the curators.

Those who have not attended the whole academical course (as students from Athenæa, &c.), and, of course, cannot produce the various certificates required, must be examined on the subjects on which others have only to produce certificates.

Foreigners, however, who declare they are not to follow their profession in Holland, are not subjected to this latter examination, nor are the certificates mentioned above, required from them. But in no case can a foreigner devote himself to the practice of a science in Holland, without undergoing the same trials as a native.

All examinations shall last at least one hour, and in the case of those who have not *certificates* to produce, two hours.

The time shall be divided as equally as possible among the different subjects.

The examinations are open to all, and, for this reason, must be announced the preceding day on the college gates.

All candidates for degrees are examined separately. A union of two examinations is strictly forbidden.

As soon as a man has successfully passed his examinations, he is admitted to the *promotion*. The promotion is either public or private. (Promotion, also, by the *cap*, more majorum, is allowed to those who desire it.)

For the promotion, it is required to write and defend a specimen inaugurale. This specimen must be a complete regular essay or dissertation on some one subject belonging to the science in which the degree is demanded. Vague positions, unsupported by reasoning, are not admitted.

When the specimen inaugurale is finished, it is laid before the Faculty, to ascertain that it contain nothing contrary to public order and good morals. If approved, it is printed and defended. In a private promotion, it is defended against the impugning of the professors only, but always with open doors. In a public promotion, it is defended against the impugning of all persons who choose to appear (*i. e.* professors, students, and others).

Students who have attended the full regular academical curriculum, and all foreigners, may make choice of either private or public promotion, as they please.

Natives, who have not attended the full regular course, *must* defend their specimen inaugurale *publicly*.

A private defence must take place, in presence of the rector and secretary of the University, who must be summoned to attend all faculty meetings for this purpose; and they vote with the members of the Faculty, as to passing or rejecting candidates.

To a public promotion, the whole Senatus is summoned; and the actual admission to the degree of doctor can only take place when a majority of the senate is present.

The candidate being declared entitled to the degree of doctor, it is solemnly demanded for him by the professor, who is *promotor* at the time (each professor, in rotation, is *promotor*); and the secretary is instructed to prepare the diploma forthwith.

In medical degrees, the oath of office must be taken before receiving the diploma. The tenor of all the diplomas is the same in all the Universities.

The rights attached to academical degrees are:—

1st. The free exercise of the Sciences expressed in the diploma, provided no more special admission to the practice is required by the law of the land.

2nd. Eligibility to all those stations and dignities in the country, for which the degree is required.

3rd. Precedence of all ungraduated persons, in meetings at which they are present together.

905

University of Edinburgh.

Dutch System of Education.

August, 1825.

The situations for which an academical degree is necessary, are the following:—

In the Reformed Church, no one can be admitted to the ministry, without having obtained the degrees of Candidate in Literature, and Candidate in Theology at least, and also producing certificates of profitable attendance for two years on the courses of the Exegesis of the Old and New Testament, Dogmatics, Christian Morality, and Rural Economy.

In Law.—No one can be admitted to practise as an Advocate in the Supreme Courts, without having obtained the degree of "Doctor Juris Romani et Hodierni."

The simple degree of Doctor Juris, explained formerly, gives no rights save literary.

In Medicine.—No man can practise any branch of medical science, in Holland, without having obtained the degree belonging to it.

The degree of Doctor Medicinæ gives right, without further examination, to practise all the internal art of healing (as a physician.)

A surgeon requires the degree of Chirurgiæ Doctor; an accoucheur, that of Artis Obstetriciæ Doctor; and a druggist, or apothecary, that of Artis Pharmaceuticæ Doctor.

Each person is strictly confined to his own profession, except in a case of extreme danger or necessity; (and prosecutions on this account are very common, and the penalty for a first offence is about 5*l.*; for a second, 15*l.*; for a third, near 100*l.*, with imprisonment, or even banishment, if persevered in).

Mathematics and Physics.—The degree of doctor in this faculty is requisite for all natives, who desire to obtain the situation of Professors or Lecturers on Mathematics and Physics.

Faculty of Literature.—Degrees in literature give right to teach the various branches, required in the examination for the degree. They are absolutely necessary for those who desire to be teachers in the Latin schools.

Various regulations were made to prevent the degree affecting those who had commenced their studies for a profession, before the publication of it, with regard to the degrees required from them.

The fees payable for each degree are:—	Florins.	£.	s.	d.
1. Candidate in Literature, Mathematics, and Physics, and in Theology .	30	2	10	0
2. Candidate in Law and Medicine	50	4	3	4
3. Doctor in Theology and in Literature	60	5	0	0
4. Doctor in other Faculties	100	8	6	8
For the additional examinations for Doctor Chirurgiæ, Doctor Artis Obstetricæ, or Doctor Artis Pharmaceuticæ, there shall be paid, over and above, the sum of	30	2	10	0

Chap. III.—Of the Professors.

The professors of Leyden, Utrecht, and Gröningen, are considered as *officers of state.* They, as well as the curators, are on that account, in so far as concerns their situations, not amenable to the jurisdiction of the authorities of the province or town.

Both professors and students are exempted from military service, by the laws regulating the militia.

In the case of billeting troops, the professors are entitled to relieve themselves from the burden, by paying a sum of money, instead of receiving the troops.

The ordinary salary of each professor is,—

At Leyden, . . .	*Florins*	2,800	£233	6 8
„ Utrecht and Gröningen, .	„	2,200	183	6 8

When a free house is attached to a professorship, then the estimated rent of it is deducted from the above salary, unless where the house is attached, not to an individual professorship, but to the senior professor in a faculty, as the reward of his long labours.

Thirty years' teaching as an ordinary professor, in one or more of the Universities, gives right to an increase of one-fourth part of the ordinary salary of the University of which he is then a member.

The emoluments of the ordinary professors (besides salary and class fees), consist of,—

1st. An equal division, among all the members of each faculty, of the balance of *dues* paid on obtaining academical degrees, after deducting the share payable to the University, the rector, and the secretary.

2nd. An equal division, among all the professors, of the dues paid by each student on *enrolment* or *recensus*, after deducting the rector's share.

3rd. The emoluments which may arise to each from holding, in rotation, one of the extraordinary University situations (as rector, &c.), according to the regulations mentioned in the sequel.

All the other emoluments formerly allowed, as robe-money, &c., are abolished.

The professores extraordinarii, and the lecturers, being no members of faculty, can claim no part of these emoluments.

Certain deductions are made from the salaries to establish and support a Widows' Fund (like the Scottish Clergy's Fund for that purpose).

The class fees for those lectures, which each professor must *ex officio* deliver, are the same in all the Universities, viz.,—

For a course of two lectures a-week . .	*Florins*	15	£1	5 0
For a course of more than twice a-week . .	„	30	2	10 0

For extraordinary instructions, given either to one or more students, each professor may make what regulations he pleases.

The Faculty or the Senate are to regulate the time and manner of paying these fees: and one payment entitles the student to attend the same class, as often as he pleases.

Professores extraordinarii have the same fees as the ordinarii.

Lecturers shall not have more than 20 florins, 1*l.* 13*s.* 4*d.* for a course of four lectures per week, and 10 florins, 16*s.* 8*d.* for one twice a-week; and for one payment the course may be repeatedly attended.

A professor is entitled to be declared *Emeritus* in the following cases:—

1st. When permanent bad health prevents his any longer discharging the duties of his office; 2nd. On account of his age, when he has reached sixty years, and at the same time given academical instruction in a Dutch University, for thirty-five years.

The rank of *Emeritus* being obtained, gives a right,—

1st. To retain his rank as professor, and his place in meetings of the Senate, but without any claim to a share in the emoluments mentioned above; 2nd. To a pension of florins 500, 41*l.* 13*s.* 4*d.*, with an addition of one-twenty-fifth part of the ordinary salary, for each year of service, as a professor, above five.

University of Edinburgh.

Dutch System of Education.

August, 1825.

(By this regulation, if a man has become a professor at thirty-two years of age, he will be enabled, at sixty, to retire with almost his full salary.)

The pension is never to rise above the amount of the ordinary salary. When a professor reaches the age of seventy, he becomes *ipso facto Emeritus*, and may retire with full salary and all his emoluments. He may continue to teach, if he pleases, but, even if he do, another professor, either ordinary or extraordinary, must be added to his faculty to lighten his labours. Emeriti professors must, if natives, continue to reside in the country, otherwise they forfeit their pensions.

Widows, until they marry again, and children till they come of age, or be otherwise provided for in a lucrative situation (whichever happens first), receive a pension of florins 500, 41*l.* 13*s.* 4*d.*, with increase, for every year above five of the deceased professor's service, of one twenty-fifth part of his ordinary salary; but the pension never to exceed florins 1000, 83*l.* 6*s.* 8*d.*

This small pension is increased by the Widow's Fund. If the widow die, the children continue to receive the pension; widows and children forfeit their pensions, if they do not reside in the country.

The *costume* of the professors is a black suit, with the toga above it. Lecturers wear a black suit and a peculiar hat.

Chap. iv.—Of the Students.

Every student must have his name inscribed by the rector in the roll of students, before he can attend any of the classes. No student can be enrolled without producing a certificate of being prepared to receive University instruction.

If he has been a scholar in a Dutch Latin school, he must produce the certificate, from the directors of it, mentioned above. If he has prepared himself for the University by domestic instruction, by his own private studies, or at a foreign school, and has therefore no such certificate to produce, he must, in order to obtain one, apply to the Faculty of Literature, who shall examine him on the different subjects required to be known by those who have regularly gone through a Latin school. A student, who has already studied some time at one University, either at home or abroad, and removes to another, is not obliged to undergo this examination, but must produce properly-attested certificates of his studies.

No one can be enrolled, who has been *expelled* from another University, by a regular sentence, for misconduct; but a simple *consilium abeundi* does not absolutely prevent enrolment, but it must be referred to the rector and assessors to decide. Foreigners, who declare that they are to return to their own country, after finishing their studies, may always be enrolled. The sum paid for this enrolment is 3 florins (5*s.*) to the rector and professors, and 1 florin (1*s.* 8*d.*) to the beadle.

It is part of the rector's duty to see that the students are informed, at the time of their enrolment, of the various duties of their new situation, and of the Statuta Academica. The academical oaths, and yearly reading of the laws, are now abolished; but instead, the statutes shall be at all times on sale at the University Printer's, and must be subscribed by each student, at the time of his enrolment. The effect of this enrolment only lasts for one academical year. After this period, the student may either be enrolled again *de novo*, or have his former enrolment recensed from year to year. The recensus, or revisal of the roll of students (called burghers of the University), must take place every year, within fourteen days after the admission of the new rector and secretary. For this revisal, the sum of one florin is paid to the professors, and one florin to the beadle. After the expiry of the specified time, the expense of a recensus is trebled. Besides the proper regular students, who actually attend the lectures of the professors, and are known to their teachers as such, no one can be enrolled or recensed a burgher of the University, except only,—1st. The lecturers and other teachers in the University, mentioned above; 2nd. The proper and actual supposts of the University (p. 229).

To prevent any abuse of the title of student, the secretary shall, each year, a few days before the recensus, send to the dean of each faculty a list of the students on the roll belonging to his faculty, and each professor shall send him a list of the students who have regularly attended his class during the past year. and those who are not found in these lists shall be struck off the roll, at a meeting of the rector and assessors, the day preceding the recensus, and cannot be again admitted to it. Each student is bound to obey the laws and statutes of the University to which he belongs, and by breaking of any of them shall incur the penalty attached to the offence by the statutes.

The most strict obedience is due to the rector; but students have right to appeal to the Senatus Academicus, when they consider themselves aggrieved. Disobedience to the rector, when the Senatus is of opinion that he has not exceeded his powers, is punished either by a *consilium abeundi*, or expulsion, according to circumstances.

The rector has a peculiar superintendence of the behaviour and morals of the students. He also takes cognizance of all offences against the academical statutes, and of non-attendance on classes. After repeatedly warning a student in vain, the rector is to bring the case before a meeting of the rector and assessors. The assessors are chosen out of the four faculties, to which the rector does not belong.

Chap. v.—Buildings, Museums, Libraries, Observatories, Hospitals, &c.

All the buildings are under the care of the curators, and are not to be applied to any other purpose.

An annual grant is made to each University (from the public funds of the nation) for the purchase of books, both Dutch and foreign. Of these grants, *one-third* is to be expended on books of physical science, including natural history; the other *two-thirds* are to be equally divided among the other four faculties, after deducting a sufficient sum for the purchase of transactions, journals, &c., in all languages. The curators are to see that this rule be fulfilled every year.

Each faculty shall yearly give to the principal librarian a list of the books they consider most necessary to be purchased: they may also purchase at sales, which may occur, taking care not to exceed their allowance, and always with the approbation of the Principal Librarian. In each Library, there must be two catalogues, either written or printed, of all its books and manuscripts: one arranged alphabetically, the other scientifically. The curators must see to this, and report annually on the state of the Library and catalogues.

Each University has an Anatomical Museum of all kinds of specimens and preparations, and also a collection of surgical and obstetrical instruments, both ancient and modern, to illustrate the history of the art. These collections are under the care of the Professors of Anatomy, Surgery, and Midwifery, each for his own branch, and each is to keep account of the expenditure of money allotted to his branch, and lay it annually before the curators.

An hospital is attached to each University, for the purposes of clinical instruction. To procure this

907

University of Edinburgh.

Dutch System of Education.

August, 1825.

advantage at the least expense, the curators are to arrange with the local authorities, to have at all times a supply of proper patients from the public hospitals. The curators are to take care that the University hospitals do not degenerate into mere charitable institutions, but that there be always a supply of proper patients, with different cases, and divided into proper proportions, between medicine, surgery, and midwifery.

For the Leyden University hospital, an annual sum is allowed of florins 10,000, 833*l.* 6*l.* 8*d.*; for Utrecht and Gröningen, florins 4500, 375*l.*—to cover all expenses.

Surgical and obstetrical instruments are to be provided for these hospitals, and kept at all times ready for use.

In all the Universities there shall also be a collection of physical instruments and models of machinery; an observatory, with its necessary instruments; a chemical laboratory, with its apparatus; separate museums for zoology and comparative anatomy, geology, and mineralogy; and a botanic garden, with a collection of dried plants.

Each of these collections is under the care of the respective professor or professors to whose department it belongs; and, in the yearly estimates, separate sums are allotted to each.

The director or directors of each museum must keep two complete catalogues of the specimens—one alphabetical, the other scientific. A copy of each must be always in the museum, and all new acquisitions immediately added. The rector must every year see that this be done before giving up his office, and report on the subject to the curators; and the directors must give the curators annually a list of all new articles added within the year. The director of each museum is personally answerable for every specimen contained in its catalogues; and when another professor requires the use of a specimen out of the museum, the director must take his receipt for it, otherwise he continues liable.

The librarian is, in the same way, accountable for books and manuscripts. The curators fix the number and salaries of the servants attached to these museums, &c., and the amount is included in the annual estimates. All these servants are appointed for one year only, and cannot be continued without a certificate from the director of the museum to which they are attached, of having given him full satisfaction.

Chap. vi.—Public Encouragement given to University Studies.

A sum of money is annually allotted—

1st, For prizes to the most eminent; 2nd, For pensions (bursaries) to assist indigent merit. For prizes, at Leyden, 10, at Utrecht and Gröningen, 6 gold medals, value 50 florins, 4*l.* 3*l.* 4*d.*

To these, only the *regular* students of the Universities and Athenæa are entitled; but all are open to the competition of all the regular students of the Universities and Athenæa.

These prizes are distributed by the rector publicly, the day he delivers his farewell oration. They are awarded to the best answer in Latin, to a prize question.

At Leyden, they are thus divided—1 in Theology, 1 in Law, 1 in Medicine, 1 in Physics, 1 in Mathematics, 1 in Astronomy, 1 in Natural History, 1 in Chemistry, 1 in Abstract Philosophy, 1 in Literature.

At Utrecht and Gröningen thus—1 in Theology, 1 in Law, 1 in Medicine, 2 in Mathematics and Physics, and 1 in Literature and Abstract Philosophy.

These are prescribed by the several faculties to which they pertain, and are so arranged as to include, in the course of years, all the various branches of instruction. In the prizes in literature, shall be occasionally included Latin orations and poems, to keep up the ancient Dutch reputation.

The questions are to be so proposed, as that the answers may rather show assiduous attention to the University instructions, than mere natural abilities. When an answer is judged worthy of the prize, by the Faculty who proposed the question, they shall open the sealed billet containing the author's name, and having the same motto with the essay; and, previous to publishing his success, the author is called before the Faculty, and must defend his work against the objections of the professors for half an hour. If, on this examination, it appear that the answer is really, *bonâ fide*, the work of the candidate, the medal shall be immediately awarded to him, and intimation given of it in the newspapers and journals, and also of the day on which it is to be presented. If the answer be in the handwriting of the candidate, he forfeits his prize.

Those who gain one or more medals, are to be named to the King, who will take care to forward them in their several professions. Successful essays are to be published in the University Almanac (mentioned below).

The sum of 17,000 florins, 1316*l.* 13*s.* 4*d.*, is yearly allowed by the nation to encourage youths of good promise, whose fortunes are not fully adequate to the expense of a university education.

This sum is divided into 70 pensions—30 to Leyden, of 300 florins, 25*l.* each; 20 to Utrecht, and 20 to Gröningen, of 200 florins, 16*l.* 13*s.* 4*d.* each. They are distributed among the various Faculties at each University as follows:—

Faculty.	Leyden.	Utrecht.	Gröningen.
Theology	10	5	5
Law	2	2	2
Medicine	4	4	4
Mathematics and Physics	4	4	4
Philosophy and Literature	10	5	5
	30	20	20

If, any year, there be not proper candidates for all the pensions in a Faculty, the curators may transfer the vacant pension to another Faculty; and they are also to make strict regulations for overseeing the behaviour and progress of those who hold them. The curators are the patrons of these pensions, but each Faculty may recommend for them young men who have already distinguished themselves at the University. They are given for one year only at a time; but they may be continued from year to year, but not for more than six years.

No one can have his pension continued, without full attestations from his several professors of regular attendance, and a written certificate from his Faculty, of diligence and progress in his studies.

There are private pensions at the Universities, founded by individuals. These may be held along with a public one, provided the private does not exceed 100 florins, 8*l.* 6*l.* 8*d.*, but not otherwise; and any student who is detected in a breach of this rule, forfeits his public pension, and can never again hold one.

To excite emulation, as well as to prove how far the above regulations answer the end proposed, an

University of Edinburgh.

Dutch System of Education.

August, 1825.

Almanac shall be annually published at each University, under the care of the secretary of the University. This shall contain—

1. The oration with which the rector of the preceding year has closed his duties;
2. The successful prize essays;
3. A list of the inaugural and other dissertations, printed *sub presidio* during the year;

Also, the orations and dissertations at the adjoining Athenæa, a list of the professors, and a programme of the lectures at each University and Athenæum.

Chap. vii.—Academical Government.

For each of the Universities of Leyden, Utrecht, and Gröningen, there is a committee of curators, consisting of five persons, chosen on account of their literary and scientific reputation, as well as their rank in society. Of these curators, three-fifths are chosen from the province in which the University is situated, and two-fifths from the adjoining provinces. They are named by the King. In their meetings, the curators rank according to the date of their nominations. The head of the city magistracy is, for the time he is so, *ex officio* a member of the committee of curators. The others hold their office for life, or till they be appointed by the King to a situation inconsistent with it. They have no salary; but at each meeting at Leyden, the sum of 75 florins (6*l.* 5*s.*) and at Utrecht and Gröningen 50 florins, (4*l.* 3*s.* 4*d.*) is divided among the members present; and they have also an allowance for travelling expenses. The meeting of curators holds the first rank among the academical meetings. The following are the duties of the curators:—

1st, To see that all laws and decrees, relative to University instruction, including the *Statuta Academica*, be obeyed by all who are bound to obey them;

2nd, To see that all the different branches of instruction appointed be taught, and the various regulations of the royal decree enforced;

3rd. To take care of all academical buildings, collections, cabinets, and everything belonging to the University;

4th. To make, alter, &c., the instructions of the several inferior persons employed in, and depending on the University; but with advice of the senate, with regard to the beadles, and of the directors of the museums and botanic gardens, as to the servants under them;

5th. They have the care of all the funds of every sort belonging to the Universities; and also of all legacies and donations, past or future, unless especially intrusted to other care;

6th. To make up the annual estimates of the probable expenses for the ensuing year, to be transmitted to the Secretary of State for the Home Department, and laid before the King;

7th. To promote everything which they think can conduce to the utility and reputation of the University to which they belong.

When a professor's chair becomes vacant, the curators send a list of two to the Secretary of State, with the reasons of their choice; the King makes the definite choice. When the curators think it would be advantageous to establish a new professorship, or to conjoin two, or to divide one into two, they are to send a memorial on the subject to the Secretary of the Home Department. The curators are patrons of the pensions. They shall always meet twice a-year, in the town where the University is situated, viz., on the day of the change of the rector, which is the first day of the academical year; and again in the month of October, to make up the estimates. Their president shall assemble them at other times, when he finds it proper. They take an oath of fidelity to the King, and also *de fideli administratione officii*. The curators at Leyden have both a secretary and a factor, with salaries; at Utrecht and Gröningen, they have only a secretary, with a salary of 600 florins, 50*l.*

The body of the University is represented by the rector and ordinary professors together, met under the presidency of the rector. This meeting is called the *Senatus Academicus*. When the curators think it necessary to have a meeting with the Senatus on any important subject, the rector, on their request, appoints a combined meeting, which has the title of *Senatus Amplissimus*. When the senate wish such a meeting, the rector intimates their wish to the curators, who decide on its propriety. This Senatus Amplissimus is always held once a-year, on the changing of the rector, on which occasion the curators receive the academical oaths of office for the year.

The Senatus Academicus have charge of the academical discipline and studies. The senate also propose to the curators whatever new regulations seem proper to further the interests of the University. The rector calls meetings of the senate, as often as he pleases. The senate has right, for the support of order and discipline, to make all such edicts and laws, for the good of the University, as do not infringe the royal edict.

These edicts and statutes are issued in name of the rector and senate, signed by the rector, and countersigned by the secretary of the senate. Copies of all these must be sent to the curators, along with the reasons of enacting them.* All permanent statutes and edicts must be printed along with the *leges Academiæ*, and made accessible to all. Attendance on meetings of the Senatus forms part of the duty of every *Professor Ordinarius* (unless exempted specially); and they receive no payment for their attendance. The expenses of these meetings are charged by the beadle to the rector, and he charges them against the University.

Each senate makes its own regulations as to its meetings, precedence, &c., so as not to interfere with the general law. In all their official business, statutes, edicts, public letters, and minutes of meetings, the Latin language must be used. The rector summons and directs the meetings of the Senatus. In case of his absence, or other lawful impediment, this, and all his other duties, devolve on the professor present, who was last rector. The dignity of rector gives, for the time, the title of *Rector Magnificus*.

The new rector assumes his office on the commencement (anniversary) day of the University. A fortnight before this day, a list of four professors is transmitted to the king, to choose the rector. These four are one from each faculty of which the existing rector is not a member. At the top of the list, is the faculty which has been longest without having the rectorate; then the next, and so on. In like manner, the person out of each faculty is named, who has been longest without being, or who has not yet been rector. When the professor, who, by this rule, should be at the top of the list of a faculty, has not been a full academical year in his situation, then not he, but the one next him, shall be named. On the retiring of the old rector, he transfers his dignity to his successor, in a solemn Latin

* In fact, no such Statuta Academica have ever been made in Holland. At one of the *Belgian* Universities, Liege they were tried, but produced a complete rebellion among the students.

909
University of Edinburgh.

oration, in the great hall of the University. This oration, which shall always be published in the University Almanac, *must* contain:—

1st. A historical sketch of the principal occurrences in the University during the year past;

2nd. A notice of any of the professors deceased during the year, with an account of their life and literary labours. Also a list, and account of any books published or prepared for publication by the professors. Other subjects are left to his discretion.

The new rector takes his seat on this day, and takes a solemn *oath*, *de fideli*, to the presiding curator. Besides the different rights mentioned before, as pertaining to the rector, he is also head of the University police. As such, he may summon any student before him, put any questions, and give any orders to him he pleases. He may also confine a student to his apartments, or convey him to a more secure place of *confinement;* but, in this last case, the rector is bound to bring the affair before the *Committee of Rector and Assessors*, within twenty-four hours, that they may decide whether the arrest is to be continued or not, and investigate the affair which caused it.

All decrees, edicts, and statutes have the preamble of *We*, *rector* and *senate*. The University maces and great seal are kept by the rector. When he goes officially to the University, he is preceded by one beadle, bearing a mace. The Senatus, in their public meetings, are attended by two beadles with the two maces. The emoluments of the rectorate arise from:—

1st. The right of enrolling;

2nd. The right of recensus, equally with the secretary;

3rd. The right of sharing in the emoluments of all promotions at which he presides, having an equal share with the members of the faculties of which he is *not* a member, and a double share in his own faculty;

4th. The sum of 150 florins, 12*l.* 10*s.*, for small expenses, postages, &c.

Each academical senate has a secretary, whose duty is:—

1st. To take charge of the common seal and of the archives; of which last, a numbered list is to be always kept along with them, and transferred from one secretary to the other, and compared by the new rector;

2nd. To keep the minutes of all meetings of the Senatus, of the rector and assessors, and of the Senatus Amplissimus. All these are to be kept in Latin, and each inserted in an alphabetical list of academical proceedings;

3rd. To keep in order the University registers;

4th. To write, or cause to write, prepare, or cause to prepare, all acts, decrees, diplomas, &c.;

5th. To prepare and take charge of publishing the University Almanac.

The secretary is chosen annually, like the rector, by the curators, along with the rector and assessors. His emoluments arise from:—

1st. The right of recensus, equally with the rector;

2nd. The right of sharing in the fees on promotions, in the same way as the rector;

3rd. A fee of 7 florins, 11*s.* 8*d.* for each diploma;

4th. An annual allowance of 200 florins, 16*l.* 13*s.* 4*d.*, for paper, postages, &c.

The assessors, chosen as mentioned above, and changing yearly, shall, when met under the presidency of the rector, assist him in transacting and managing business of all kinds. This is part of the duty of each professor, and gives no right to additional emolument. Besides the meetings of the Senatus, and of the rector and assessors, each faculty shall hold meetings for its own particular concerns. In these meetings, each professor shall, in rotation, preside for one year as dean; and the youngest of the other professors shall act as secretary. These duties also give no right to additional emolument.

Degrees are bestowed by these faculty meetings; and the members of each faculty are to divide the examinations among themselves, as they best may, according to the spirit of the regulations in Chap. II. For the service of the rector, and various meetings, there are two beadles at each University. Besides their salaries, they receive from each student, on enrolment or recensus, 1 florin, 1*s.* 8*d.*; for attendance at each examination, 2 florins, 3*s.* 4*d.*; and for each promotion, 7 florins, 11*s.* 8*d.*

At Leyden, there is also a *porter*, charged with opening and shutting the University gates, and keeping the hall clean. He also assists the under-librarians, and has a salary of 250 florins, 20*l.* 16*s.* 8*d.*

(The regulations of these seven chapters apply to the three Universities of Leyden, Utrecht, and Gröningen. Those of Belgium Proper are under a different law, chiefly on account of the religion of the country.)

From Professor Moll.

After every examination whatever, either for the degree of doctor or candidate, or even for passing from a lower to a higher class, the *examinandus* is called in, and it is publicly announced whether he has passed *simpliciter*, *cum laude*, or *summâ cum laude*. I think, he adds, this practice produced beneficial results.

The second part of the trial No. 2, for the degree of doctor in literature, is to be thus understood. Two passages, one from a Greek, and another from a Latin author, commonly understood to be corrupt, are proposed to the candidate, and he is to give some critical conjecture, how they should be amended. It is therefore a critical exercise, an *emendatio critica alicujus spurii vel corrupti loci*. The passage may be either prose or verse, as the faculty pleases.

Public promotion is often chosen. Last year, out of thirty-four promotions, twelve were public, and twenty-two private. The year before last, out of thirty-nine, twenty-three were public, and sixteen private. The public promotions are certainly more difficult than the private, inasmuch as the professors, in a private defence, will not press a candidate *ultra modum*; while in a public defence, he is left at the mercy of his friends and his enemies.

After passing his examinations, the candidate is sure to be made a doctor; but there is a great difference attached to the *modus quo* (the ability of his thesis, &c. &c.).

The *supposts* of the University are, the apparitores or beadles, the prosecutor, hortulanus, and assistants for astronomical, physical, chemical, and other lectures.

Breaches of academical discipline, only, are punished by the rector and assessors; the *communia delicta* of the students are tried before the ordinary judges of the place. The students formerly had a

University of Edinburgh.

Dutch System of Education.

August, 1825.

forum privilegiatum, but it is now abolished, which Professor Moll thinks a great improvement, although opinions are divided on the subject.

A student cannot be kept decently at the University of Utrecht under 800 florins to 1000 florins (66*l.* 13*s.* 4*d.* to 83*l.* 6*s.* 8*d.*) per annum. Many poor theologians subsist on less, and, of course, many spend much more.

A stranger or traveller is allowed, as a matter of courtesy, to attend the lectures, though private. This is technically called *hospitáre*.

Examinations take place at all seasons of the year. At Utrecht, the jaardag, *i. e.*, the anniversary, or commencement-day, is 26th March. The long vacation begins before the summer solstice, and lasts thirteen weeks. There are also two short vacations, one at Christmas and another at Easter, of fourteen days each.

All the regulations of the royal decree are observed as strictly as can be expected. The number of professors at Utrecht is found to be sufficient for carrying on their system. In addition to the eighteen ordinary professors, they have two extraordinary at present.

If a student thinks himself wronged by a decree of the Senatus, he may appeal to the Secretary of State for the Home Department, and subsequently to the King himself.

The professors have no power to fine or impose tasks on their students.

SERIES LECTIONUM IN ACADEMIA RHENO-TRAJECTINA,

Inde a Die 19 *m. Septembris, anni* 1826, *usque ad Ferias Æstivas, anni* 1827, *a Professoribus et Lectoribus habendarum, Rectore Bernardo Francisco Suerman.*

In Facultate Medicâ, docebunt—

Anatomiam, B. F. Suerman, quater per dierum hebdomadem, horâ iv.

Physiologiam, Th. G. Van Lidth de Teude, diebus lunæ, martis, jovis, et veneris, horâ auditoribus commodâ.

Dissectionibus Cadaveris Anatomicis, opportuno anni tempore instituendis, præerit B. F. Suerman.

Pathologiam exponet B. F. Suerman, ter per dierum hebdomadem, horâ ix.

Doctrinam de Cognoscendis et Curandis Hominum Morbis, J. J. Wolterbeek, quinquies horâ xii.

Therapeuticam Alimentorum et Medicamentorum Expositionem, J. J. Wolterbeek, quater horâ i.

Pharmaciam, vernaculo sermone, N. C. de Fremery, diebus martis et veneris, horâ tertiâ.

Institutionibus Clinicis Morborum Internorum vacabit J. J. Wolterbeek, singulis diebus, in nosocomio academico.

Praxin Chirurgicam tradet B. F. Suerman, quater per dierum hebdomadem, horâ viii.

Operationes Chirurgicas demonstrabit B. F. Suerman, tempore hyemali, diebus et horis deinceps indicandis.

Institutioni Clinicæ in Arte Chirurgicâ, quovis die, vacabit B. F. Suerman.

Theoriam Artis Obstetricæ, J. J. Wolterbeek, ter per dierum hebdomadem.

Institutionibus Obstetriciis, imprimis practicis, in nosocomio habendis vacabit J. J. Wolterbeek.

Morbos Chirurgicos Generales, Ph. F. Heyligers, diebus lunæ et martis, horâ ii.; jovis et veneris morbos Venereos eadem hora docebit.

Operationes Chirurgicas in Cadavere Humano publicè demonstrabit Ph. F. Heyligers, tempore hyemali, eorumque encheiresium rationem, vernaculo sermone, exponet quater per dierum hebdomadem, horâ v.

Artem Obstetricam Theoreticam et Practicam docebit Ph. F. Heyligers, quater quavis hebdomade, horâ i.

Politiam Medicam tradet N. C. de Fremery, diebus mercurii et saturni, horâ viii.

Disputandi Exercitationibus, alternis hebdomadibus, Professores in Facultate Medicâ præerunt.

J. Bleuland, licet propter ætatem septuaginta annorum honorificé rude donatus, commilitonibus, qui explicationem accuratiorem speciminum anatomicorum et pathologicorum in museo præsentium desiderabunt, sua officia, quantum ætas et valetudo permittent, offert.

In Facultate Philosophiæ Theoreticæ et Literarum Humaniorum, docebunt—

Logicam, J. F. L. Schröder, diebus lunæ et saturni, horâ ii.

Loca Selecta ex Metaphysices Doctrina, J. F. L. Schröder, diebus jovis et veneris, horâ ii.

Doctrinæ Moralis alteram partem, die Martis, horâ ii.

Literas Latinas A. Van Goudoever, diebus martis et veneris, horâ x., die mercurii, horâ i., et die saturni, horâ xii.; interpretando cum Ciceronis libros de Officiis, tum Horatii Epistolarum, librum i.

Historiam Latinæ Poëseos, A. Van Goudoever, diebus lunæ et jovis, horâ x.

Antiquitatem Romanam, A. Van Goudoever, die lunæ, hora ix., die mercurii, horâ ix. et xii., die saturni, horâ ix.

Exercitationibus Oratoriis præerit A. Van Goudoever, die saturni, horâ i. vel aliâ magis commodâ.

Literas Græcas tradet Ph. G. Van Heusde, interpretandis locis selectis cum Xenophontis et Theocriti, diebus martis et veneris, horâ xi., tum Platonis, diebus lunæ et jovis, horâ xi.

Historiam Literariam Philosophorum Veterum, Ph. G. Van Heusde, diebus mercurii et saturni, horâ x.

Literas Hebraicas J. H. Pareau, ita ut Grammaticam exponat diebus lunæ et jovis, horâ ix., eâdemque horâ diebus martis et veneris, quædam tractet capita ex posteriore Samuelis libro.

Literas Chaldaicas et Syriacas, J. H. Pareau, diebus lunæ et jovis, horâ xi.

Literarum Arabicarum initia, J. H. Pareau, diebus martis et veneris, horâ xi.; et Carmina quædam Arabica ex Hamasæ excerptis tractabit, die mercurii, horâ ix.

Antiquitatem Hebraicam, J. H. Pareau, diebus lunæ et jovis, horâ i., diebus martis et veneris, horâ iv.

Historiam Gentium præsertim Græcorum et Romanorum, Ph. G. Van Heusde, diebus lunæ, martis, jovis, et veneris, horâ xii.

Historiam Philosophiæ recentioris, imprimis moralis, Ph. G. Van Heusde, diebus mercurii et saturni, horâ xi.

Historiam Patriæ, A Simons, diebus martis, mercurii, jovis, et veneris, horâ viii.

Literas Belgicas et Eloquentiam, A. Simons, diebus martis, mercurii, jovis, et veneris, horâ ii.

Æstheticam, quæ Poësin spectat, A. Simons, diebus martis et veneris, horâ iv.

Precepta Styli bene Belgici tradet, A Simons, die martis, horâ i., mercurii, horâ xi., jovis, horâ iv., et veneris, horâ ix.

Disputandi exercitationibus, sermone Belgico præerit, alternis hebdomadibus, die saturni, horâ ix., A. Simons.

Communication to Scottish Universities by Dr. E. Harrison.

PROCEEDINGS OF THE SENATUS ACADEMICUS, relative to the COMMUNICATION MADE BY DR. EDWARD HARRISON, in regard to the MEDICAL GRADUATES of the Scotch Universities.—Extracted from the Records of the University.

(Transmitted by the Principal.)

Edinburgh, 16th April, 1827.

16 April, 1827. The Principal presented a letter from Dr. E. Harrison, inclosing certain Resolutions of the Medical Graduates of the Scotch Universities, which were read as follow:—

"*London, No. 7, Hollis Street, Cavendish Square, April 7, 1827.*

7 April, 1827. "Reverend Sir,—As Chairman of a Meeting of Medical Graduates of the Scotch Universities, held on Thursday, April 5, 1827, I have the honour to transmit to you a copy of Resolutions then adopted, trusting that the Senatus Academicus of the University over which you preside, will be pleased to take the subject into their serious consideration, and that you will honour me with as early a communication as may be convenient, of their sentiments on this important occasion, addressed to me as above.

"I have the honour to be, Reverend Sir, your most obedient humble Servant,

(Signed) "EDW. HARRISON.

"*To the Rev. Dr. G. H. Baird.*"

---

5 April, 1827. "At a Meeting of Medical Graduates of the Scotch Universities, held at the Spring Garden Coffee-House, the 5th of April, 1827, Edward Harrison, M.D., F.R.A.S. Ed., in the Chair;

"*It was Resolved,*

"1. That a monopoly of the practice of physic in this metropolis, and other privileges connected therewith, in favour of the Royal College of Physicians in London, does now exist, and has for a long time existed, to the infinite detriment of the public, of the medical profession, and of the Universities of Scotland.

"2. That it has been incontrovertibly shown, in various late works, but more particularly in "An Exposition of the State of the Medical Profession in the British dominions, and of the injurious effects of the Monopoly by Usurpation of the Royal College of Physicians in London," that all the exclusive privileges exercised by that body have been assumed entirely in virtue of illegal by-laws of their own creation.

"3. That there is besides strong ground to believe, that powerful attempts of a most insidious nature are actually making, for the purposes of supporting and perpetuating, by indirect and concealed means, those usurped and pernicious privileges.

"4. That the public discussions, which have recently arisen, and are now afloat, concerning the discipline of the Universities, and the organization of the different branches of the medical profession, it is evident, cannot terminate without legislative interference; and it is no less obvious that the rights and privileges of the Scotch Universities, and their medical graduates, will continue to be sacrificed in England, unless they avail themselves of this occasion, vigilantly, strenuously, seasonably, and unitedly, to exert themselves for their protection.

"5. That amongst the grievances that more directly affect the medical graduates of Scotland, the following merit particular attention:—1. Although, by the law of the land, the London College of Physicians is equally open to the graduates of all Universities, the fellowship is restricted by their own illegal by-laws, to graduates of Oxford and Cambridge, and members of Trinity College, Dublin, matriculated into the English Universities. 2. By a recent Minute in Council, it has been determined, that, in future, the Physicians to his Majesty, in England, should be selected exclusively from amongst the fellows of the College of Physicians. 3. Whilst these regulations and restrictions tend widely to exalt one class of physicians, to the injury of all the rest, they operate more especially against the Scotch graduates, since they have ceased to enjoy the privilege of being, like the graduates of Trinity College, Dublin, incorporated with the English Universities. This hardship is the more felt, inasmuch as, by the treaty of Union, the Universities of both countries are placed, in respect to their general rights, upon an equal footing.

"6. That since the Fellows of the College of Physicians, the Council of the College of Surgeons, and the Company of Apothecaries, hold each of them regular meetings in their respective Halls; and since the numerous class of general practitioners, and likewise the accoucheurs, have recently associated, to uphold and to extend their respective privileges; the rights of the Scotch Universities and their medical graduates, unless they co-operate to maintain and to defend them, cannot fail to be overlooked or violated in the approaching conflict.

"7. That it appears therefore highly expedient, or rather indispensable, both in order to obtain the restitution of rights and privileges so long and so injuriously alienated, and to prevent future encroachments, that, in the present critical circumstances of the profession, the Scotch Universities should honour their medical graduates in London with their countenance and powerful support, whether in appeals to the Legislature, or in such other measures as may be thought best calculated to attain these salutary objects.

"8. That copies of these Resolutions be transmitted by the chairman to the Principals of the Scotch Universities, to be laid before the Senatus Academicus of each for their consideration; and that they be respectfully requested to favour him, as early as may be convenient, with the sentiments of these learned bodies, concerning the important matters to which their attention is now earnestly solicited by their medical graduates.

(Signed) "CHARLES MACLEAN, M.D., *Secretary.*"

The Senatus Academicus referred this communication to the medical professors and law faculty, to report at next meeting.

University of Edinburgh.

Report on Dr. Harrison's Communication.

28 April, 1827.

Senate Hall, 28th April, 1827.

The Committee appointed at last Meeting, presented the following Report on Dr. Harrison's communication, viz. :—

"The Committee agreed to recommend to the Senatus to return an answer to the graduates of the Scottish Universities in London, declining to make at present any application to the Legislature on the subject of their communication, in consequence of a Royal Commission having been appointed for the special purpose of inquiring into all matters regarding the Scottish Universities; to which Commission the Committee conceive that the Senatus ought to address themselves on any such occasion as the present.

"The Committee are of opinion, that the Senatus should transmit the communication of Dr. Harrison without loss of time to the Royal Commissioners, and request their attention to the statements therein made; that although it would be improper for the Senatus to enter on the question of the legality of the unequal restrictions imposed by the Acts of the Royal College of Physicians of London, on the graduates of the Scottish and English, the Senatus may accompany this communication with an opinion, that no advantage to the public is derived from the restrictions in question, the professional character of the medical graduates of this University being at least as high as that of the graduates of any other University in the Empire.

"*Lastly*, The Committee are of opinion, that if it should be still thought expedient that the graduates of this University should be debarred from the honours and privileges which those of Oxford and Cambridge enjoy in England, it may be suggested to the Royal Commissioners, that a participation in these honours and privileges may at least be claimed for such gentlemen as may take in this University the two degrees of A.M. and M.D., or for such as may take a higher degree under the title of doctor in medicine and in philosophy, under any conditions which the Royal Commissioners may be pleased to appoint."

The Senatus approved of the foregoing Report; and agreed to return an answer to the Scottish graduates, in conformity with their Resolutions; and also to transmit a copy of all the proceedings connected with this communication to the Royal Commission, without loss of time.

Extracted from the Minutes,

(Signed) ANDREW DUNCAN, Junior, *Sec.*

Proceedings of the Senatus Academicus on the plan proposed by Dr. Harrison for a Medical Reform, 1806.

PAROCHIAL EDUCATION IN SCOTLAND.

Parochial Education in Scotland.

28 August, 1827.

Return to the following Circular Letter of the Chairman to the different Presbyteries of Scotland :—

"*Edinburgh*, 28*th August*, 1827.

"Sir—In the course of the inquiries prosecuted by the Commissioners appointed by his Majesty for visiting the Universities and Colleges of Scotland, it has appeared that it would be of great consequence to ascertain to what extent the parochial and other schools, in this part of the United Kingdom, are capable of carrying on the preparation of young men with advantage in a course of liberal study before commencing attendance at the Universities; and it is thought that the most satisfactory and expeditious mode of obtaining this information, in a form sufficiently accurate and authentic, is through the medium of the Presbyteries of the National Church.

"You are, therefore, requested to lay before the Presbytery of which you are clerk, at its first meeting, this letter, with the schedule annexed on the 2nd and 3rd pages, and to solicit the earliest possible return to the queries comprehended in it. In order that the members of the Royal Commission may be enabled to make the necessary use of the information now requested, before they complete their investigation, it is hoped that the returns may be forwarded early in the course of this autumn.

"The most convenient method of transmitting the answer will be by returning this letter, when the columns are filled up, addressed to the clerk of the University Commission at Edinburgh.

"The members of the Royal Commission are persuaded that they may safely rely on the assistance which they now solicit from the Presbyteries of the Church of Scotland, in obtaining information on matters bearing very essentially on the consideration of the important subject of academical education, in the improvement of which the Church of Scotland has so deep an interest.

"I have the honour to be, Sir, your most obedient servant,

(Signed) "ROSEBERY, *Chairman.*

"*Note.*—It is requested, that in filling up the subjoined schedule, one line may be devoted to the parochial schoolmaster of each parish, and a second line to other teachers. If the number of lines be too small for containing all the parishes, another sheet may be added, divided into the same number of columns, and ruled uniformly with the printed schedule.

"In cases in which no students are actually taught Greek, the Presbyteries are requested to mention whether the schoolmasters are *capable* of teaching Greek. It is wished that the returns should contain not only the parochial, *but all other* schools within the bounds, respecting which the Presbytery can obtain information."

The following are the Queries in the Schedule annexed to the Circular :—

Names of parishes ?—Number of teachers ?—How many years have any of the teachers attended a University ?—How many pupils are at present studying Latin ? Greek ? Mathematics ? Geography ?—In what number of years do they complete the study of Latin ?—What Greek grammar is taught ?—What Latin and Greek classics are read ?—What elementary books of mathematics are used ?—What other branches are taught in any of the schools ?—And any other remarks which the Presbytery deem material.

GENERAL REMARKS.

The following table is made up from the particular returns received from the Presbyteries, in answer to the preceding Circular, and is confined chiefly to the particular points tending to show the

University of Edinburgh.

Parochial Education in Scotland.

capability of parochial schools for preparing pupils for a University. These returns are in general tolerably explicit and ample, with reference to the particulars embraced in the table, though in various cases there is a deficiency of specific information. This table, therefore, must necessarily participate in the defect; but the result is an approximation to accuracy. Any points appearing material, not embraced in the table, are put under the head of remarks at the end.

The Presbytery returns—in the preparation of which the Presbytery clerks in general have had the goodness to bestow much labour in the arrangement of the information laid before them (often in a very imperfect state)—are necessarily voluminous. They do not, of course, embrace tutors nor their pupils. They contain replies to five queries, the information obtained in answer to which is not embraced in the table. To three of them, see the remark placed opposite thereto as under; and with respect to the remaining two, the general answers understated, may be given as the fair result of the replies:—

1st Query.—*In what number of years do students complete the study of Latin?*
2nd Query.—*What Latin and Greek classics are read?*
3rd Query.—*What elementary books of mathematics are used?*

Though the answers, in several cases, are explicit and satisfactory, yet most of the Presbyteries—probably from not having adverted to the particular object of these queries—have returned answers in such general terms, as not to furnish the means of judging to what extent the classical education of youth is carried on within their bounds, or how far the schoolmasters are capable of teaching the branches of instruction which are usually taught in the junior classes in the University.

4th Query.—*What Greek grammar is taught?*

Ans.—Moore's Greek grammar, edited by Dunbar, appears to be the one most generally used. Latterly, the grammar prepared for the Edinburgh Academy has got into extensive use. Moore's is used in Inverness, Perth, Elgin, St. Andrew's, Stirling, Glasgow, Edinburgh, Ayr, and Aberdeen.

5th Query.—*What other branches are taught in any of the schools?—and any other remarks which the Presbytery deem material.*

Ans.—Book-keeping (system of keeping accounts), and English grammar are in universal demand.

The rudiments of the French language appear to be in general requisition in most of the large towns; and occasionally drawing.

The observations made by the Presbytery, in reference to the concluding part of the query, are given in the remarks at the end.

Notes on the Table.

* (*a*) In parishes where there is no parochial school under the Act 1803, but a burgh school, as is the case in some of the royal burghs, such parishes are here held as having an established school, and are included in the columns accordingly. In a parish where the established schoolmaster has not received a University education, but has a University assistant, such parish is likewise held to have an established University schoolmaster, and ranked according to the assistant's qualification. All other descriptions of schoolmasters are put in the columns as *private* ones.

† (*b*) Some of the Presbytery returns seem to include all pupils acquiring the elementary parts of arithmetic, *as studying mathematics*, while other Presbyteries have confined this part of the return strictly to those who are learning geometry, algebra, &c.

‡ (*c*) The number stated of geography pupils is rather within the actual number in the Presbyteries of Aberdeen Annan, Glasgow, Haddington, Lochmaben, Linlithgow, and St. Andrew's, as in each, the return as to all the parishes is not quite complete.

A RETURN, arranged according to Presbyteries, as to the State of PAROCHIAL EDUCATION in Scotland, distinguishing the number of Parishes having established Schoolmasters, who have completed a Course of University Education of not less than four Sessions, or for a period less than a Course; from the number of those Parishes which have only Private Schoolmasters, who have completed a Course of University Education of four Sessions, with the number of such Private Schoolmasters within the Presbytery's bounds; also the number of Parishes without University Schoolmasters, and specifying the number of Scholars at Latin, Greek, Mathematics, and Geography.

Names of Presbyteries.	No. of Parishes.	No. of Parishes having established Schoolmasters educated at a University.*					No. of Parishes having only *private* University Schoolmasters of four years, with the No. of such Schoolmasters within Presbytery bounds.		No. of Parishes without University Teachers.	No. of Latin Pupils.	No. of Greek Pupils.	No. of Pupils at Mathematics. †	No. of Pupils at Geography. ‡	No. of Parishes vacant, or from which no Return.

§ No Returns from the Presbyteries of North Isles and Tain.

University of Edinburgh.

Remarks on the Presbyter Returns.

REMARKS ON THE PRESBYTERY RETURNS.

(Any points appearing material, not embraced in the Table, are put under this head of Remarks.)

Aberbrothic.—Of the number of pupils stated, there are 27 Latin, 3 Greek, and 5 at Mathematics, at the academy of Aberbrothic. The private schoolmasters appear to be omitted in the return from this Presbytery.

Aberdeen.—In the Presbytery return, in so far as regards the city of Aberdeen, the qualifications of the established schoolmasters are distinguished from those of the private schoolmasters. The distinction, however, is not made as to the other parishes. On this account, wherever it is stated that a parish has a university schoolmaster, without making such distinction, it is here presumed that he is an established one, and included in this table accordingly. Exclusive of the town of Aberdeen there are only 12 Latin pupils; none at Greek or Mathematics, excepting in the two parishes of Nig and Belhelvie, where it is stated that "several" are at Mathematics.

Aberlour.—The Presbytery represent, "that in all the parochial schools of the Presbytery, Latin, both elementary and classical, and Mathematics, including some of the higher branches, such as Mensuration, Trigonometry, Navigation, and Algebra, as well as the common branches of arithmetic, are branches of education always in demand, though in some of the parishes not extensively so; and the capability of teaching them is uniformly insisted on, in the admission of schoolmasters." The Presbytery earnestly recommend—1st, an increase of the salaries of parochial schoolmasters; 2nd, a provision for a retiring allowance for the aged and infirm schoolmasters. Letter of Presbytery recommends these provisions at length.

Abernethy.—No particular return from this Presbytery. The Presbytery Clerk represents, that "the Presbytery did not consider a formal answer necessary, as there is no Greek or Mathematics taught in any of the parochial schools within the bounds of the Presbytery. The few parents who are inclined and can afford to give a liberal education to their children, think it unnecessary to get them instructed in any of the higher branches, till they are sent to the University. The only branches of education taught in the parochial schools under the inspection of this Presbytery are English, Latin, Arithmetic, and Book-keeping." Presbytery recommend an increase of the salaries of the parochial schoolmasters.

Abertarph.—From the great number of pupils stated to be at Mathematics, supposed that it includes pupils at Arithmetic. See remark at beginning.

Alford.—The Presbytery represent, that it is the opinion of some of the members of Presbytery, that "to make it imperative on our parochial schoolmasters to teach Greek, will be highly injurious to these our unquestionably most useful seminaries of learning, as it would distract the attention of the teachers from their other duties, which, considering the multitude of branches, and consequent still greater number of classes, which they already teach, are more than sufficiently numerous."

Annan.—Of the number of pupils stated, there are, at the Annan Academy, 45 Latin, 10 Greek, and 8 at Mathematics. No return as to qualifications of the teachers of this academy. Presbytery represent, "That no difficulty would arise in this quarter, should the University Commission effect such a change in the course of college education as would render an attendance of six or even seven years at our parish schools necessary in learning the classics preparatory to entering the University. In Annan, Dornoch, Graitney, Kirkpatrick, Fleming, Middlebie, and Ruthwell, the teachers are well qualified to prepare their pupils for what are at present the *second* classes of Greek and Latin in our Universities, and there can be no doubt, that such an arrangement would be highly advantageous. It is, moreover a general and just complaint, that our parochial teachers are very inadequately remunerated, and something ought to be done by Government to remedy an evil of such magnitude, which has already degraded the character of our parochial establishment."

Ayr.—Of the number of pupils stated, there are 94 Latin, 22 Greek, and 24 at Mathematics, in Ayr.

Biggar.—Private schoolmasters do not appear to be noticed in the return from this Presbytery. No return as to the qualifications of the parish schoolmaster of one of the parishes. The Presbytery clerk represents, that "Greek would be taught almost in all the schools, if wanted."

Brechin.—Of the number of pupils stated, there are, in Brechin, 58 Latin, 6 Greek, and 4 at Mathematics; in Montrose, 70 Latin, 7 Greek, and 30 at Mathematics; in the remaining parishes, 5 Latin, and 9 at Mathematics. The Presbytery represent, that "in Brechin and Montrose, and five of the country parishes within the bounds of the Presbytery, young men may be prepared for entering the University;" and "that one reason why so many of the parochial teachers within its bounds are incapable of teaching Greek and Latin, is the power vested, by the last act of Parliament relative to parochial schools, in the heritors of parishes, to prescribe to the Presbytery what branches are to be taught in the respective schools." Presbytery therefore recommend that it should be imperative on parochial schoolmasters to have attended the University at least two sessions, that their salaries ought to be augmented, and that burgh schools ought to be under the superintendence of the Presbytery.

Cairston.—In Stromness there are two schools where Latin is taught, one having 4 Latin pupils. In the principal school "Greek and Euclid's Elements might be taught, were any pupils choosing." The private schoolmaster in this Presbytery was educated two years at a University.

Caithness.—The Presbytery of Caithness represent it as their opinion, "that there ought to be no elementary class for Greek in any of the Universities. The existence of such a class they conceive to be one of the chief reasons why that language is so little known in Scotland. In their opinion no boy ought to be admitted to college who has not made some considerable progress in Greek. Many members of this Presbytery are inclined to entertain a similar opinion with respect to an elementary class of Mathematics," are of opinion that too little attention is paid in some of the Universities to the moral and religious conduct of the students, consider this a great evil, and calling for immediate redress, regret that so little pains is taken in some of the colleges "to call forth the talents of the students and to reward distinguished merit."

Chanonry.—Qualifications of the established schoolmasters not distinguished from those of the private ones. Same remark applicable here as is made in the case of Aberdeen.

Chirnside.—In two of the parishes the number of pupils not reported. One of the five parishes without university schoolmasters, has five Latin, and 4 Greek pupils; another of such parishes has 6 Latin and 1 Greek pupil; and another has 5 Latin and 5 Greek pupils. The private teachers in these two parishes have been one year at college.

Cupar. These ten parishes without University schoolmasters have 17 Latin pupils.—Of the number of pupils stated in the table, there are, at the academy of Cupar, 47 Latin, 12 Greek, and 42 at Mathematics. The Presbytery letter, which is too long for insertion here, contains several important statements in regard to parochial schools.

Dalkeith.—Of the number of pupils stated there are, at

Inveresk, . .	80	Latin,	15	Greek,	16	at Mathematics.
Dalkeith, . .	67	Do.	6	Do.	8	Do.
Other Parishes,	37	Do.	12	Do.	5	Do.
As in Table, ——	184	——	33	——	29	

From two of the parishes no report has been received.

Dumbarton.—No report as to two parishes.

Dumfries.—No return as to four parishes. In the town of Dumfries there are 110 Latin and 26 Greek pupils, and 25 at Mathematics.

Dunbar.—Of the number of pupils stated there are, at the Grammar school at Dunbar, 24 Latin, 4 Greek, and 12 at Mathematics.

Dunblane.—No return as to parish of Dunblane.

Dundee.—There are 10 schoolmasters, not parochial, in Dundee, who have completed a University course. Of the number of pupils stated, there are in Dundee, 108 Latin, 28 Greek, and 108 at Mathematics. Presbytery represent, 1st, The inadequacy of the salaries of parochial schoolmasters; 2nd, That legal provision should be made for ensuring properly-qualified schoolmasters, fit to prepare pupils for the University; 3rd, That the Schoolmasters' Act should be amended, to the effect of admitting any schoolmaster to appeal from a sentence of Presbytery; 4th, A provision for a retiring allowance to the aged and infirm schoolmasters; and 5th, That there should be a parochial school in the town of Dundee, which is without one. Letter of Presbytery recommends these provisions at length.

917
University of Edinburgh.

Remarks on the Presbyter Returns.

Dunfermline.—Of the number of pupils stated there are in Dunfermline, 48 Latin, 6 Greek, and 10 at Mathematics.

Dunkeld.—The Presbytery represent that about one-half of the schoolmasters within their bounds can teach Latin well. Latin and Greek are seldom required. Private schoolmasters (if any) do not appear to be included in the return. The pupils returned are all taught at Dunkeld. In some of the other schools there appear to be occasionally Latin pupils: but the specific number is not stated.

Dunoon.—The qualifications of the private schoolmasters are not stated.

Dunse.—Of the number of pupils stated, there are, in Dunse, 58 Latin, 15 Greek, and 8 at Mathematics. No report of the number of pupils from one of the parishes.

Edinburgh.—Sixteen parishes are connected with the city of Edinburgh and town of Leith. With regard to some of those of Edinburgh, there is a want of specific information; but they are all here entered as having University schoolmasters, there being no doubt that the means of obtaining the higher branches of education are within the reach of all the inhabitants. The same rule has been adopted in respect to Perth and some other of the larger towns. There is no return from two of the Edinburgh parishes, viz. St. George's and St. Cuthbert's; in the last of which is situated the Edinburgh Academy. The number of pupils attending this seminary was obtained from the Secretary, and is included in the table. In the eight other parishes there are, exclusive of those of Edinburgh and Leith, 81 Latin pupils, 15 Greek, and 85 at Mathematics. It is known that in Edinburgh and the suburbs there are, and have long been many teachers, having charge of considerable schools, at which the same branches of classical learning are taught as at the High School. In 1824 four schools in St. Andrew's parish were reported to the Presbytery as teaching Latin and Greek to 280 boys. The schools still exist though the number of pupils in some of them may have decreased.

Edinburgh and Leith,	1317	Latin,	648	Greek,	336	at Mathematics.
Other parishes,	81	Do.	15	Do.	85	Do.
As in table,	—— 1398		—— 663		—— 421	

(See addition on next page.)

Elgin.—One parish school vacant, but there were 4 Latin and 1 Greek pupil attending it.

Ellon.—Greek is taught in the Udney Academy, but the number of pupils is not specified. At this academy are 24 of the 74 Latin pupils stated. The Presbytery represent that it should be imperative that parochial schoolmasters should be capable of teaching Latin and the elements of Greek.

Fordoun.—The parish without an University schoolmaster, has three Latin pupils, and two at Mathematics. All the private schoolmasters do not appear to be stated, nor the number of their pupils in Latin, &c.

Fordyce.—All the private schoolmasters do not appear to be returned. Of the number of pupils stated there are 45 Latin, 4 Greek, and 36 at Mathematics, in Banff. It is apprehended that in the return from this Presbytery, pupils learning the elementary parts of arithmetic, are returned as pupils at Mathematics.

Forres.—The private schoolmasters do not appear to be included in the return from this Presbytery. Of the number of pupils stated there are at the Academy of Forres, 47 Latin, 4 Greek, and 4 at Mathematics.

Glasgow.—Qualifications of private schoolmasters not distinguished. Private University schoolmasters, however, must be numerous. In the two parishes without University schoolmasters, viz. Eaglesham and Kilsyth, it is stated there are "a few" Latin pupils; and in the first, "a few Greek" pupils, but the precise number is not stated.

Haddington.—No return of the private schoolmasters. In the seven parishes without University schoolmasters, there are 18 Latin pupils. The number of pupils at each branch in Shaw's Hospital, Prestonpans, is not specified. It is stated, "Latin, Greek, Mathematics, and Geography taught there; number of pupils 28."

Hamilton.—One of the parishes without an University schoolmaster has 16 Latin pupils; the other has 5 Latin and 1 Greek pupil.

Inverary.—Presbytery represent that none of the schoolmasters can teach Greek except two. Of the number of pupils stated there are at Inverary 12 Latin and 6 Greek.

Inverness.—Qualifications of all the private schoolmasters not stated. In Inverness Academy there are 4 schoolmasters educated a full University course; and of the pupils stated there are 84 Latin, 21 Greek, and 15 at Mathematics in that town. Presbytery represent, that "young men rarely go to the University directly from the schools in the country parishes, but generally pass a year or longer at the academy in Inverness, where they prosecute the study of the Latin and Greek languages further than is done in the country schools. All the parish teachers of recent appointment have attended a University one year or more, and are capable of teaching Latin, Greek, and Mathematics. The parish schoolmaster of Kiltarlity is the only one in this Presbytery who cannot teach Greek. He is an old man, upwards of 80 years of age.

Irvine.—Presbytery represent that the schoolmasters' salaries are inadequate. No return from one parish.

Jedburgh.—No return as to one parish. In the towns of Jedburgh and Hawick there are 60 pupils at Latin, 16 at Greek, and 70 at Mathematics. In reference to the number at Mathematics it is stated, that it is "practical mathematics, that is chiefly referred to."

Kelso.—From three parishes no return has been received; and in regard to a fourth, no report as to the number of pupils has been obtained. Of the number of pupils stated, there are at Kelso 27 Latin, 3 Greek, and 22 at Mathematics.

Kincardine O'Niel.—Qualifications of private schoolmasters do not appear to be distinguished.

Kirkcudbright.—No report from one parish. The qualifications of the parish schoolmasters are not distinguished from the private schoolmasters in the Presbytery return. Of the number of pupils mentioned there are 50 Latin, 30 Greek, and 12 at Mathematics, in the town of Kircudbright.

Kirkwall.—Of the number of pupils stated there are in the parish of (St. Olay) Kirkwall and St. Olay, 52 Latin and 8 Greek. Excepting in Kirkwall the Presbytery represent that none of the schoolmasters can teach Greek.

Lanark.—Of the number of pupils mentioned, there are taught in the town of Lanark, 30 Latin, 8 Greek, and 12 at Mathematics.

Langholm.—The five parishes without University schoolmasters have 29 Latin pupils, 2 Greek, and one at Mathematics.

Lauder.—Presbytery return does not include the qualifications of private schoolmasters. Most of the parochial schoolmasters are represented as being fitted for preparing young men for the University.

Lewis.—One parish school vacant. Gaelic is chiefly taught within the Presbytery's bound.

Linlithgow.—In one of the three parishes without University schoolmasters, there are 20 Latin pupils, 3 Greek, and 5 at Mathematics. In the town of Falkirk the number of Greek pupils (if any) not stated. The number of pupils in one of the parishes (Uphall) not stated. In Linlithgow there are 37 Latin and 4 Greek pupils; in Bathgate there are 37 Latin, 11 Greek; and in Falkirk there are 59 Latin pupils.

Lochcarron.—No report from one parish.

Lochmaben.—In the five parishes without University schoolmasters there are 25 Latin and 8 Greek pupils. No report from one parish.

Lorn.—Qualifications of private schoolmasters not specially stated in Presbytery return. Presbytery represent that the provision for parochial education within their bounds is totally inadequate.

Meigle.—No return from one parish, and two had their established schools vacant at the date of the return. Presbytery report only 12 parishes; Almanac states 13. The Presbytery represent that "many of the schoolmasters are not men of sufficient education for the situations they fill, and this is owing to the small salaries provided for them by law."

Mull.—No return as to one parish. Qualifications of private schoolmasters not distinguished.

Nairn.—Qualifications of private schoolmasters not distinguished.

Paisley.—Of the number of pupils mentioned, there are, in the towns of Paisley, Greenock, and Port Glasgow, 291 Latin, 36 Greek, and 70 at Mathematics; and in these places there are a considerable number of private University schoolmasters. The five mentioned are in other parishes. In one of the parishes without an University schoolmaster it is represented that the parochial schoolmaster is capable of teaching Latin and Greek.

University of Edinburgh.

Remarks on the Presbyter Returns.

Peebles.—No report from four parishes. "The Presbytery report, that the literary attainments of parochial schoolmasters have been greatly extended during the last twenty years, and that no difficulty now exists in procuring many well qualified to teach Greek and Latin, to fill up the vacancies as they occur." Of the number of pupils mentioned there are 48 Latin, 7 Greek, and 14 at Mathematics, in the town of Peebles.

Perth.—As to the length of time the University schoolmasters attended the University, the information is not very specific. Presbytery represent that there are in Perth, "several public and several private excellent teachers of Latin and Greek and Mathematics. In the public Grammar School, the average number of Latin scholars is about 130, of Greek scholars between 40 and 50." Number at Mathematics is not stated. There is no return of pupils from the other parishes, neither is there any special return as to private schoolmasters. Most of the parish schoolmasters are reported to know a little Latin, but very imperfectly; and "that excepting in Perth and in Dunbarney, and perhaps one or two other parishes, there are not, in all the parishes within the Presbytery bounds, the means of acquiring a knowledge of the elements of that language. There are of course very frequently no Latin and no Greek scholars in several of the schools, the masters of which know something of one or both of these languages."

St. Andrews.—Of the number of pupils stated, there are in St. Andrews 56 Latin, 10 Greek, and 11 at Mathematics.

Selkirk.—As to three of the parishes there are no reports. Of the number of pupils mentioned there are 25 Latin, 11 Greek, and 9 at Mathematics in the town of Selkirk; and in Galashields there are 36 Latin, 14 Greek, and 14 at Mathematics.

Stirling.—Of the number of pupils mentioned there are, in the towns of Alloa, Dollar (where there is a richly-endowed academy), and Stirling, 163 Latin, 68 Greek, and 43 at Mathematics.

Stranraer.—Of the number of pupils stated there are, in the parishes of Stranraer and Leswalt, 102 Latin, 12 Greek, and 32 at Mathematics.

Strathbogie.—Presbytery suggest the propriety of a retiring allowance being provided for aged and infirm parochial schoolmasters.

Turreff.—Presbytery return apparently does not embrace private schoolmasters. Presbytery represent the parochial schoolmasters as respectable and well qualified. 215 pupils stated to be at Mathematics. (See remark at beginning as to Mathematical pupils.)

Wigton.—From two parishes no report received. Of the number of pupils mentioned there are, in the parish of Penningham, which is without a University schoolmaster, 31 Latin, and 3 Greek.

Zetland.—No particular eeturn received from this Presbytery; the Presbytery reporting in general, "that there is no parochial teacher within their bounds capable of conducting the studies of young men for an University."

Addition.—As it may not be unimportant to bring into view the course of instruction pursued at the two principal Academies in Edinburgh, the following Extracts are taken from the Prospectus published by each in October, 1827:—

Outline of Course of Study at the High School of Edinburgh, with the principal Class Books.

First Year.—1. *Latin*—Ruddiman's Rudiments, High School Vocabulary, Sententiæ Selectæ, Corderius, Grammatical Exercises. 2. *General Knowledge*—embracing English Grammar, Roman History to the close of the Republic, Outline of Modern Geography, Murray's English Grammar, Goldsmith's larger Roman History, Mylne's Geography. 3. *French*—Hallard's Grammar, Chambaud's Fables.

Second Year.—1. *Latin*—Adam's Grammar, Grammatical Exercises, Phædrus, Cornelius Nepos. 2. *General Knowledge*—English Grammar, Roman History to the Close of the Empire, Outline of Ancient Geography, Murray's Grammar, Goldsmith's Roman History, Mylne's Geography. 3. *French*—Hallard's Grammar, Chambaud's Fables, Scott's Recueil, Rollin.

Third Year.—1. *Latin*—Adam's Grammar, Mair's Introduction, Cæsar, Ovid, Latin Testament, Latin Version twice a-week. 2. *Greek* (to commence 1st April)—Moor's Greek Grammar by Tate, High School Greek Vocabulary, Greek Testament. 3. *General Knowledge*—English Composition, History of Greece to the end of the Peloponnesian War, Particular Geography of Europe and Asia, Murray's Grammar, Robertson's History of Greece, Mylne's Geography. 4. *French*—Hallard's Grammar, Scott's Recueil, Fenelon, Le Sage.

Fourth Year.—1. *Latin*—Adam's Grammar, Mair's Introduction, Sallust, Virgil, Buchanan's Psalms, Latin Version, or Theme thrice a-week, Antiquities. 2. *Greek*—Grammar, Vocabulary, Testament, Dalzel's Collectanea Minora. 3. *General Knowledge*—English Literature and Composition, History of Greece till it became a Roman Province, Particular Geography of Africa and America, Murray's Grammar, Robertson's History of Greece, Mylne's Geography. 4. *French*—Hallard's Grammar and Exercises, Scot's Recueil, Marmontel, Voltaire, Pecard, Perrin, Raynal, l'Abbé de Lille, Boileau, La Fontaine, Rosseau, and Racine.

Rector's Class.

Fifth, Sixth, and Seventh Years.—The Higher Greek and Latin Classics, Antiquities, Ancient Geography, Composition in Prose and Verse, in the Greek, Latin and English Languages. *Latin*—Mair's Introduction, Carson on the Construction of the Relative, Adam's Roman Antiquities, Virgil, Horace, Anthologia Latina, containing Extracts from Terence, Juvenal, Plautus, Tibullus, Propertius, and Lucretius, Livy, Cicero, Tacitus. *Greek*—Greek Exercises, Greek Testament, Xenophon, Herodotus, Thucydides, Demosthenes, Homer, Æschylus, Sophocles, Euripides. The parts of the Authors to be read each year will be mentioned in the Class.

The Young Gentlemen attending the Rector's Class, and the Fourth, have the use of the High School Library. The Works most suitable to be read in History, Biography, Voyages, Travels, Belles Lettres, &c., will be pointed out in the Class; and on the Books being returned questions will be put by the Master, to ascertain that they have been carefully read.

The Scriptures are read in all the Classes.

TABLE OF FEES.

The Four Junior Classes.

Latin and Greek	*Per Quarter*	£0	15	0	
General Knowledge, per Qr. .	£0	5	0	}	Attendance
French . . . ditto .	0	2	6	}	optional.

Rector's Class.

Latin	*Per Quarter*	£0	16	0	
Greek, per Annum . . .	£1	1	0	}	Attendance
Geography, ditto, . . .	1	1	0	}	optional.

Writing and Arithmetic.
(Attendance optional.)

One Hour a-day	*Per Quarter*	£0	7	6
Two Hours a-day		0	10	6

Matriculation, 5*s.* per Annum, payable at entry, for Janitor, Cleaning, Library, Maps, Models, &c. No other Dues, whatever.

High School, Edinburgh, October 1, 1827.

Plan of the Edinburgh Academy.

The Edinburgh Academy is a Public Classical School, for boys from eight to fifteen or sixteen years of age.

The Establishment was opened on the 1st of October, 1824, and the studies of each year commence on the 1st of October, and continue till the 1st of August, when the vacation begins. It consisted at that time of a rector, four classical masters, a master for the English language and literature, a master for arithmetic and geometry, with two assistants, and a writing master with two assistants; a French master is now added.

When a boy commences his classical studies at the Academy, he enters the first or junior class. He continues to be taught exclusively by the same master (in the classical department) for four years, during which time he belongs to the first, second, third and fourth classes, in successive years.

According to the original plan a boy at the commencement of the fifth year was to leave his former classical master to enter the rector's class, and remain there two years, to complete the course of instruction, consisting of English, Latin, Greek, Geography, Writing, Arithmetic, and Geometry, which was usually followed, with the exception of geometry, at the High School of Edinburgh, and other similar establishments in Scotland, previously to his going to the University. It has, however, been long a subject of regret with many parents in Scotland, that, by this system, their sons are obliged to terminate their school education at an age much too early for their entering upon the comparatively independent life of a college student, as this course of six years brings them to the University at the early age of fourteen, freed at once from the regular discipline of a school, with this further disadvantage,

914
University of Edinburgh.

Edinburgh Academy.

that the session of the College does not extend beyond six months.

Strongly impressed with the conviction of the evil consequences that frequently resulted from this system, and urged by the solicitation of the parents of boys at the Academy, the Directors remodelled their system from the commencement of the fifth year's studies, and have now made arrangements for extending the course of instruction from six to seven years.

During the three last years the boys will belong to the fifth, sixth, and seventh classes respectively. The classical instruction of these pupils will be divided between the rector and the classical masters. The masters of the first, second, and third classes, acting respectively as assistants to the rector, in the fifth, sixth, and seventh classes.

The four junior classes are examined for two hours once a fortnight by the rector.

The state of advancement of each class may partially be judged of by the following statement of the studies of the year 1826–27:—

First Class.—*Latin*—Ruddiman's Rudiments, revised for the use of the Academy, Valpy's Delectus. *English*—History of Scotland, with Exercises in English Grammar; *Geography* and *Writing*.

Second Class.—*Latin*—Phædrus and Cornelius Nepos, Latin Grammar, and Grammatical Exercises. *English*—History of Scotland. *Geography* of Europe generally, of England, Scotland, Ireland, France, Spain, and Portugal. *Writing*.

Third Class.—*Latin*—Cæsar's Commentaries, Eton Extracts from Ovid, Mair's Introduction. *Greek*—The Academy Rudiments, Sandford's Extracts. *Geography*—Modern Ireland, Portugal, Spain, France, Switzerland, and Italy, Ancient Italy. *English*—History of Greece, *Arithmetic*—Elementary rules, simple and compound, Weights and Measures, Reduction and Proportion. *Writing*.

Fourth Class.—*Latin*—Eton Extracts from Ovid, Virgil's Æneid, Sallust, Mair's Introduction. *Greek*—Academy Rudiments, Sandford's Extracts. *Geography*—Portugal, Spain, France, Netherlands, Switzerland, Italy, Prussia, Poland, German States. *English*—History of Rome. *Arithmetic*—Proportion, Practice, Interest, Profit and Loss, Barter, Vulgar Fractions. *Writing*.

Fifth Class.—*Latin*—Virgil's Æneid, Horace's Odes, Livy, (21st Book,) Exercises, Prose and Verse. *Greek*—Homer's Iliad, Xenophon's Anabasis. *Geography*—Modern Italy, Austria, Prussia, German States, Russia, Turkey in Europe, Hindostan, Ancient Italy. *English*—Milton's Paradise Lost. *Arithmetic*—Vulgar and Decimal Fractions, Extraction of the Square and Cube Roots, Duodecimals. *Geometry*—First Book of Euclid. *Writing*.

Sixth Class.—*Latin*—Virgil's Æneid, Horace's Odes, Livy, (22nd and 23rd Books,) Cicero's Orations, Exercises Prose and Verse, *Greek*—Homer's Iliad, Xenophon's Anabasis, Euripides' Alcestes, Greek Exercises. *Geography*—Maps of Ancient Spain, Gaul, Britain, Germany, Italy, Syria, Palestine, Egypt. *English*—Milton, Readings from Shakspeare, Themes and Critical Exercises. *Arithmetic*—Same as Fifth, *Geometry*—First Four Books of Euclid. *Algebra*—As far as simple Equations. *Writing*.

Seventh Class.—*Latin*—Virgil, Horace, Juneval, Tacitus' Mores Germanorum, Agricola, Cicero's Orations. *Greek*—Homer's Iliad, Sophocles' Œdipus, Herodotus, First Book. *Exercises*—Greek, Latin, and English, Prose and Verse. *Geometry*—Euclid, First Six Books. *Algebra*—As far as Cubic Equations. *Trigonometry*, with Mensuration of Planes and Solids. *French*—The Class was taught to read common French Authors with correctness and facility.

In all the classes a portion of the time is allotted to English grammar, reading, recitation, and prose composition.

All the classes in the Academy are under the superintendence and control of the rector.

There are libraries in the third and senior classes, consisting of books of instruction and amusement, suited to the age of the boys in the different classes. These books are lent out weekly to the pupils, at the discretion of the master, as a reward for good conduct.

The hours of attendance are from 9 A.M. to 3 P.M., with various short intervals for play.

The expense of the Academy to each pupil is as follows:—

Every pupil pays annually, in the month of October, an academy fee, which is two guineas for the first class, and three guineas for each subsequent year.

The fees for instruction are payable at two periods, viz. October and March, in equal sums; and these, together with the Academy fee, make the whole amount payable annually by each pupil in the respective classes, as follows:—

First Class	£ 7	2	0
Second ditto	8	13	0
Third ditto	10	17	0
Fourth ditto	11	9	0
Fifth ditto	10	17	0
Sixth ditto	10	9	0
Seventh ditto	11	11	0
Average annual expense of the 7 years,	10	2	7

There are no other payments for any purpose whatever, nor are any presents or gratuities by the pupils permitted.

The number of boys in each class is limited to 110.

Edinburgh, 1st October, 1827.

PROPOSED COLLEGE AT DUMFRIES.

Proposed College at Dumfries.

(*The following Papers were presented on* 18*th August*, 1829, *and ordered to be printed.*)

Whitehall, 29*th July*, 1829.

29 July, 1829.

Gentlemen,—I have the honour to transmit to you, by the commands of his Majesty, the accompanying copies of letters (*these are hereto subjoined*) which have passed between Mrs. Crichton, Mr. Hope Johnstone, and myself, on the subject of the appropriation of a considerable bequest, placed at the disposal of Mrs. Crichton, with the consent of trustees, by the late Mr. Crichton of Friars' Carse.

The letters are sufficiently explanatory of the suggestions which I have offered to Mrs. Crichton, in regard to the preliminary inquiries which it is desirable to institute before any final measures are taken for the appropriation of the bequest, and of the general views which, in concurrence with the trustees, she entertains as to the mode of its disposal.

You will perceive that Mrs. Crichton expresses a decided preference for the establishment of a college at Dumfries.

I am to signify to you his Majesty's pleasure, that this important subject may be taken into your consideration—that you will communicate, as occasion may require, with Mrs. Crichton and the trustees, and will report your opinion to his Majesty, whether it will be advantageous to accede to the proposal made by them—and if you should be of opinion that the establishment of a college at Dumfries will conduce to the propagation of sound academical instruction in Scotland, that you will consider and report what is the footing on which it ought to be placed, in respect to the course of instruction to be pursued at the college, the privileges to be conferred upon it, and other matters of this nature.

I have the honour to be, Gentlemen, your most obedient humble servant,

(Signed) Robert Peel.

To the Commissioners of Inquiry into the Universities in Scotland, &c. &c. &c.

(Copy.)

Friars' Carse, 5*th July*, 1829.

5 July, 1829.

Sir,—I should have great reason to apologize for intruding on your more important avocations, were it not that I am convinced, that to you all apology must be superfluous in a matter of public interest, and which may prove of the most essential benefit to no inconsiderable part of the south of Scotland.

The generous confidence reposed in me by the late Mr. Crichton of Friars' Carse, my husband, has placed in my disposal the residue of his large fortune, to be bestowed in such bequests, to his friends and relations, and in such charitable purposes, as I, with consent of the trustees named in his settlement, may appoint.

In the exercise of the discretionary power thus vested in me, and in compliance with what I believe

University of Edinburgh.

Proposed College at Dumfries.

5 July, 1829.

to have been the wish of my husband, it is my intention (and my husband's trustees fully concur with me) to bestow a very considerable portion of the funds in question, in the endowment of a college in the town of Dumfries, the capital of the south of Scotland, and the centre of a rich and populous county, a situation where such an institution could not but be eminently beneficial, and to vest the patronage and administration of such college in the hands of Government, provided the consent of his Majesty's Government could be obtained for endowing such a foundation with university privileges, without which there is reason to fear, that much less public benefit would result from the establishment, than would otherwise, of necessity, be derived from it. The funds which could at present, and eventually, be made applicable to the foundation in question, amount to at least 85,000*l.*; but of this amount 30,000*l.* only could be made immediately available, the remaining capital falling into the institution by the gradual termination of certain annuities which at present burden it.

Should the plan be esteemed, by his Majesty's Government, to be worthy of their support, and should it be reckoned an object of any consequence that a larger capital should be made available immediately for the foundation and endowment of the proposed establishment, the whole capital would be immediately made over for this purpose, was Government to charge itself with the annuities which at present lock up the portion of it which has been mentioned.

It seems at present unnecessary to go into any more minute detail, than merely to say, that should Government be disposed to concede the boon, which alone could render the proposed institution extensively beneficial—a boon which would be received with the warmest gratitude by the county of Dumfries, and the whole of the south of Scotland—I am prepared to make the appropriation of the funds, which I have mentioned, by immediate deed of gift (with the consent of my husband's trustees), in such form and manner as may be deemed most advisable and effective. The only stipulations for which I contend are the following :—

1st. That the right of presentation to the Chairs of Divinity and Moral Philosophy be conceded to me during my life.

2nd. That I be empowered to nominate and have upon the foundation, at all times, ten poor scholars, who shall receive instruction in the various branches of literature and science which are taught in the college, free of expense.—I have, &c.

(Signed) E. Crichton.

(Copy—*Private.*) *Whitehall*, 16*th July*, 1829.

16 July, 1829.

Madam,—I avail myself of the earliest opportunity of acknowledging your letter of the 5th July, which, partly owing to an absence of three days from London, did not reach me till this morning.

I feel confident that you will consider that I am acting in the manner best suited to the great importance of the subject, on which you have done me the honour to address me, and to the noble bequest of the late Mr. Crichton, if I confine myself for the present to the acknowledgment of your communication, and request time, for the purpose of being enabled to give to it that full consideration to which it is so eminently entitled.—I have, &c.

(Signed) Robert Peel.

Mrs. Crichton, Friars' Carse, N. B.

(Copy.) *Whitehall*, 20*th July*, 1829.

20 July, 1829.

Madam,—You probably are aware, that a short time since his Majesty was graciously pleased to appoint certain noblemen and gentlemen to act as Commissioners of Inquiry into the whole state of Public Education, as it is at present administered by the Universities of Scotland.

To this important duty they have applied themselves with great assiduity, and they have collected much valuable information on every point connected with academical studies in Scotland.

It has occurred to me that much advantage might be derived from consulting the Commissioners upon the subject, on which you have done me the honour of addressing me; but I am unwilling to make any reference to them, even for the purpose of soliciting an opinion on their part, without previous communication with you, and without your acquiescence.

After that opinion should have been delivered, I should of course submit it to you for your consideration.

I shall be much obliged to you by your informing me, whether you have any objection to my addressing a letter to the Commissioners, to whom I have before referred, requesting them to communicate with you, or any person whom you might name, upon the subject of the bequest, and to report an opinion as to the mode by which that bequest would be rendered most conducive to the propagation of sound academical instruction in Scotland.

If you should have a decided preference for the establishment of a college at Dumfries, the Commissioners might be directed to report their opinion on all the details connected with the foundation and privileges of such an establishment.

The enclosed paper contains the names of those noblemen and gentlemen who constitute the Commission appointed by his Majesty.—I have, &c.

(Signed) Robert Peel.

Mrs. Crichton, Friars' Carse, N. B.

(Copy.) *Raehills, Moffat*, 26*th July*, 1829.

26 July, 1829.

Sir,—Mrs. Crichton has sent me the letters of the 16th and 20th July, which you have had the goodness to address in answer to her communication relating to the application of the residue of the late Mr. Crichton's trust-funds to the foundation of a college at Dumfries; and she has requested me to acquaint you with her sentiments on the several points to which your inquiries are directed.

Mrs. Crichton has a decided preference for the establishment of a college at Dumfries, and she is convinced that it would have been the wish of the late Mr. Crichton, as it is her own, to secure to his native county the peculiar advantages which must accrue to those who are resident in the immediate vicinity of such an establishment.

It will therefore be highly gratifying to Mrs. Crichton that her proposal be submitted for the consideration of the Royal University Commission, as she will thereby have assurance that the most full inquiry will be made to ascertain whether the scheme to which it relates can be carried into effect, with

921

University of Edinburgh.

Proposed College at Dumfries.

a prospect of affording to the youth of the south of Scotland the benefits which she is desirous to confer upon them—and that if her proposal be not acceded to, it will only be in consequence of a deliberate conviction, on the part of his Majesty's Government, that the establishment of a college at Dumfries would not accord with the views which they entertain, as best calculated to promote academical instruction generally in Scotland.—I have, &c.

(Signed) J. J. H. Johnstone.

Right Hon. Robert Peel.

26 July, 1829.

(Copy) *Friars' Carse, Dumfries, 27th July*, 1829.

27 July, 1829.

Sir,—I have authorized Mr. Hope Johnstone of Annandale to act for me in the business of the proposed establishment at Dumfries, as being one of our most influential men in this part of the country, an influence which he has acquired, as much from his personal talents and devotedness to the public good, as from his family and fortune.—I have, &c.

(Signed) E. Crichton.

Right Hon. Robert Peel.

Raehills, 13th October, 1829.

13 October, 1829.

My Lord,—Immediately after I had the honour of waiting upon the Royal University Commission in the end of August last, I, in following out the instructions which I then received, addressed a letter to the Clergy of the counties of Dumfries and Galloway, requesting to be informed as to the number of young men who had attended the Scottish universities from each of the parishes within that district during the last three years, believing that correct information on this point would be essentially useful in enabling the Commission to form an opinion as to the probable success of a college at Dumfries.

The number of the parishes is 89, and I have obtained returns from 65 of them. In the observations I have now to make, I have supposed the average attendance of students of divinity and philosophy, from the parishes from which I have *not* received returns, to be the same as from *the others* in the district, but have estimated the number of students who attend the medical and legal classes somewhat lower, because it appears that a large proportion of these descriptions of students belong to the town of Dumfries, while it has furnished only one student of Divinity and five of philosophy.

I believe that this manner of calculation will be found sufficiently accurate for every practical purpose, and in reality very near the truth.

The total number of students who have attended college during the three years, is in this view 471. Of these, 94 may be taken as (having) studied divinity, 173 medicine, 57 law, and 147 philosophy. If there are deducted the legal and medical students, in the supposition that these branches of learning could not be included in the establishment, there remains 241 students, whose attendance might almost certainly be calculated on. But I am inclined to think, that a great many of those young men, who eventually might turn their attention to the medical and legal professions, would take advantage of the vicinity of the college at Dumfries, and prosecute their preliminary studies there. Probably this might be the case to the extent of 100 in three years; so that taking that term as the average duration of a course of study at the university, this district would supply about 350 students.

It appears also likely, that in this county, which is decidedly characterized by a strong spirit of enterprise, the desire after a more liberal education would increase, as increased facilities for obtaining it were afforded. And this opinion I find is entertained by very many of the clergy, who have the best opportunities of ascertaining the feelings and sentiments of their parishioners on such a subject.

It is also certain, that many young men would be attracted to Dumfries from the north-western counties of England, and also from the north of Ireland, though I have no grounds to enable me to estimate the number. It might, and probably would be very considerable, especially from England, looking to the great population of that district of it, and the distance at which it is removed from any existing university.

Among the circumstances which strongly recommend Dumfries as an eligible situation for a college, are those connected with the size and nature of the town itself. Its population is small, and of a highly respectable character; and as it enjoys no advantages either of a manufacturing or commercial nature, there is no prospect of it being augmented in any considerable degree.

Great power of superintendence, therefore, would be possessed by the Professors, while the temptations to, and facilities for low dissipation, would be comparatively small. These considerations would operate powerfully on the mind of many parents in inducing them to give a college their preference to those universities which are situated in great cities, and would especially have this effect in country places, where the dread of exposing young men whose knowledge of the world must necessarily be very limited, without control, to the demoralizing influences which in such situations must affect them, is not unfrequently so strong as to deter parents from sending their children to college at all.

Connected with this part of the subject, it occurs to me that much general good might result from the establishment of an entirely new college, in arranging the details and constitution of which, effect might be given to all those changes which the investigations of the Commission suggest as likely to be improvements in the system of university education as followed in Scotland. To whatever extent it may appear to the Commission desirable to recommend these changes, they could obviously with much greater ease be introduced in the formation of a new college, than ingrafted into any existing institution; and it is perhaps not undeserving consideration whether a trial of them might not with advantage be made, and their mode of working ascertained, before they were brought into operation in the old establishments.

The proposed college at Dumfries would afford the greatest facilities for such experiments, from being entirely under the control and guidance of Government.

There is another argument in favour of the proposed plan, which strikes me as being very important: that if the offer of Mrs Crichton be not accepted, in all probability the sum at her disposal will be lost to the purposes of education in Scotland.

I am not prepared to assert that this will absolutely be the case, for I believe that Mrs. Crichton has not yet determined to what charitable purpose she would wish to apply this money, in the event of it being decided that a university cannot advantageously be founded at Dumfries. But I may mention, that though that lady alone has power to *propose* the mode of application, she cannot apply the money without the *concurrence* of a majority of the trustees named in her husband's settlement, and that there

University of Edinburgh.

Proposed College at Dumfries.

13 October, 1829.

is great reason to doubt if they would consent to any proposition which would withdraw the benefit of its application from this county.

This argument is of course of no power in the face of a conviction, either that the establishment of a college at Dumfries would be injurious to the general system of education in Scotland, or that a college would not be likely to prosper there; but it may be of considerable weight, if the investigations of the Commission do not, as I sincerely hope they will not, lead them to either of these conclusions.

As to the nature of the establishment which seems best suited to the situation of Dumfries, and the wants of the district, I venture with great diffidence to offer any observations.

The study of law can, I imagine, only be carried on in the vicinity of the courts, and I scarcely think that a medical school could be maintained to any good purpose in so small a town as Dumfries. The great obstacle in the way of its success would be the limited nature of the private practice, which would either deter men of eminence from accepting the medical chairs, or render it necessary to endow them extravagantly, to the dilapidation of the funds; while the want of extensive hospitals would expose the students to serious disadvantages, so obvious as not to require mention. The exclusion of medical study would also tend to obviate much of the opposition which might be expected on the parts of the universities of Edinburgh and Glasgow.

In so far, therefore, as I can judge, it would appear that the college should embrace only the studies of divinity, of general literature, and of philosophy. I trust I have before stated grounds for the confident belief that the attendance of students in these departments of learning would be sufficient to support most respectably an establishment, and there seems no reason to doubt the adequacy of the fund for the endowment of a college on this scale.

In the communications which I have had with influential gentlemen in this and the adjoining county, I have met with many differences of opinion as to the likelihood of the plan being useful. In this county, the feeling is generally and strongly in its favour, while the proposal is viewed with little interest in Galloway. I am, however, justified in saying, that the portion of the district most immediately in connexion with Dumfries, and that a large and populous one, is most anxious that the measure should be carried through. And here I would respectfully suggest to the Commission, that an establishment of this nature is not to be supported so much by the sons of gentlemen, as by those of farmers and the better class of tradesmen.

The sons of the more wealthy gentry would still go the English universities, or to that of Edinburgh, where their families are probably resident during the session. But to those who, from pecuniary circumstances, or the nature of their avocations, are necessarily stationary in this part of the country, the foundation of a college at Dumfries would be an invaluable boon, and as such I am certain it would be received. On this point I am sure that I do enough in merely presenting it to the attention of the Commission, since they must have observed how large a proportion of Scottish students is drawn from the classes which I have named.

From the indifference with which the proposal is regarded by the leading proprietors in Galloway, I fear that little in the way of subscription in aid of the undertaking can be expected from that quarter. Still, if this establishment was decided on, I am not without hopes that those gentlemen might be induced to come forward and contribute towards its support; and I am quite satisfied that a considerable sum would be subscribed in this county, and by those (and there are many such) who, connected with it by birth, have raised themselves to affluence in various parts of the world. The subscription might be proposed for some special purpose, as the endowment of a particular professorship, or as a fund for the formation and maintenance of a college library.

I have thus, my Lord, endeavoured to place before the Commission some facts, which will, I hope, be considered as going far to prove that a college, on a moderate scale, would succeed at Dumfries. That it would be eminently beneficial to the district around it, no one who is sensible of the advantages which result from the diffusion of knowledge can doubt; and, looking at the inclination to rise to a higher station in society, which is at all times manifested by the middling classes in this county, I am convinced that even more benefit would be derived from such an institution, than one would be led, merely on a general principle, to expect.

I am well aware, that supposing the success of the proposed college to be quite clear, there are considerations of a general nature, which may not only warrant, but oblige the Commission to discountenance it. But I can truly say for those most keenly interested in the scheme, that though they have felt that it was peculiarly their province to endeavour to promote it as a local benefit, they would regret to see it supported at the expense of the general interests of education; and it is this feeling which leads them to look with such confidence to, and will make them acquiesce most readily in the decision, whatever that may be, of the Commissioners, whose information enables them to view it in relation to the whole university system of Scotland, and whose duty it will be to prevent its execution, if it be not consistent with those improvements in that system which it is their object to introduce.

I have the honour to be, my Lord, your obedient humble servant,

(Signed) J. J. H. Johnstone.

PROVISIONAL RESOLUTIONS OF THE ROYAL COMMISSIONERS OF VISITATION.

Provisional Resolutions.

Elementary Greek Class.

That it is the opinion of the Commission, that it would in a high degree raise the standard of Classical Literature in Scotland, that the Elementary Greek Classes in the different Universities be discontinued, and that no person be received into the first Greek class, who had not been accurately instructed in the Grammar, and had not attained such proficiency in the language as to read with facility the Historical parts of the New Testament, and the three first Books of the Anabasis, or the three first Books of the Cyropædia of Xenophon—That for ascertaining and securing such preparatory knowledge, there shall be, at the commencement of every Session, a strict Examination, by not fewer than three persons properly qualified, not being Professors, appointed for this purpose by the Senatus Academicus of the several Universities, whose Report of such as are duly qualified shall be transmitted to the Professor of Greek, in order to entitle them to be enrolled as Students of his Class—That the appointment of the Examiners, to whom upon their election an oath *de fideli* shall be administered, shall be for a period not exceeding three years; and that the

University of Edinburgh.

Provisional Resolutions.

change of practice now specified shall not take place till five years after the Report of the Commission, sanctioned by His Majesty, shall be regularly notified to the Universities. [That for accomplishing in the most effectual manner the object contemplated, means should be adopted for securing adequate qualifications in Parochial and Burgh Schoolmasters.]

The clause within brackets was omitted in the copies transmitted to the Universities.

It is farther the opinion of the Commission, that a similar Examination shall take place, of those intending to enter the first Latin Class, in the Latin Grammar, in the Æneid of Virgil, or in the Odes of Horace, and in Sallust or the first five Books of Livy, and in translating, at the time of Examination, from English into Latin—and that the Examiners shall report to the Professor of Humanity, in the like manner as is prescribed in the case of Greek, in order to entitle such as are qualified to be enrolled as Students in his Class—That the change of practice above recommended, as to the Latin Class, shall not take place till two years after the Report of the Commission, sanctioned by His Majesty, shall be regularly notified to the Universities.

Curriculum.

1*st Year.*—It is farther the opinion of the Commission, that the Curriculum for the first year shall include the first Latin and first Greek Classes—that the Examination of Students intending to enter these Classes shall begin on the 1st of October annually, and terminate on the 10th of the same month, upon which day the regular business of these Classes shall commence, and continue till the 1st of May following; and that the only exception to this rule shall be in the case of illness, family misfortune, or such unavoidable cause; when, upon special application being made, a later Examination may be allowed by the Senatus Academicus, to take place on or before the 10th of November.

That the first Latin and first Greek Classes shall be taught two hours each day.

2*d Year.*—That the Curriculum of Study for the second year of attendance at College shall include the *second Latin*, *second Greek*, and first Mathematical Classes.

That there shall be entrance Examinations of students desirous to enrol themselves for the second Latin and second Greek, to be conducted in the same manner and by the same class of Examiners as the Examinations for admission to the Classes of the preceding year.

That these Examinations shall apply to the studies of the first year.

That no students shall be enrolled in these Classes who do not appear to be qualified for the second Classes, in the course of the above-mentioned Examinations.

That the second Greek and second Latin Classes shall be taught two hours each day.

That the Examinations for these Classes shall commence when the regular Examinations for the first Classes terminate (*i. e.* on the 10th October), and the regular business of the Class shall commence in the first week of November.

That students proposing to enter the Mathematical Class, must pass an Examination in the first six Books of Euclid.

That the Examiners for this Class shall be chosen in the manner above-mentioned.

That the Examinations for this Class shall commence on the 20th of October, and the business of the Class in the first week of November.

3*d Year.*—That the Curriculum for Study during the *third* year of attendance at College, shall include a *third* Greek Class, a second Mathematical Class, and a Class for Logic and Rhetoric.

That the *third* Greek shall be taught for one hour each day, and that a small fee shall be exacted from those who have attended the first and second Greek Classes, and a full fee from all others.

That the second Mathematical Class shall be taught for one hour each day.

That the Logic Class shall be taught for two hours each day—one hour being employed in Lecturing, and a second hour in Examinations, Exercises, Themes, Composition, &c.—with such extra Meetings as the reading of Essays, additional Examinations and Exercises, may, in the judgment of the Professor, render advisable.

4*th Year.*—That the Curriculum for Study during the fourth year of attendance at College shall include the Classes of Natural Philosophy and Moral Philosophy, with liberty to attend the third Greek Class without the payment of any fee.

That the Classes of Natural and Moral Philosophy shall each be taught for two hours each day of the week—one hour being employed in Lecturing, and a second in Examinations, Exercises, Themes, &c.

That the Entrance Examinations above prescribed for the Latin, Greek, and Mathematical Classes, shall apply to all students, without any distinction, intending to attend these Classes.

That in order to obtain admission to the Mathematical, Logic, Natural and Moral Philosophy Classes, no previous Examination in Greek or Latin shall be required.

That the Examinations, Exercises, Themes, &c., in the Logic, Natural Philosophy, and Moral Philosophy Classes, shall be imperative on all the students, except on those who have obtained an exemption, on an application to the Principal to that effect; and no student so exempted shall be present at the Examination hours, or shall be entitled to a Certificate of attendance on the Class, or be admitted as a Competitor for Prizes, or a Candidate for Degrees.

That the Commissioners are strongly of opinion that the Examinations of all the students in the several Classes ought to be as general and as frequent as circumstances will admit.

That previously to the end of each Session, there shall be a Public Examination, by the Professor of each Class, in the several Classes forming the Curriculum of Study, of those students who desire to undergo such Examination, and of those who are selected for the same by the Professor of the Class—to be held in the presence of the Senatus and other Members of the University, and the parents and friends of the students.

Class Prizes.—The Commissioners have formed an opinion in favour of the plan of giving Prizes in all the Classes, as materially promoting emulation and exertion on the part of the students.

Fines and Impositions.—The Commissioners have formed an opinion, that the principle of punishing in the several Classes by Fines is very objectionable, and ought to be entirely abolished; and recommend, that, in place of them, impositions by additional Exercises or Examinations shall in future be resorted to by the Professors, as one method of punishing students for any misconduct.

Political Economy.—The Commissioners are of opinion, that Political Economy should be regularly taught by the Professors of Moral Philosophy in all the Universities, as a separate Class, at a separate hour.

925

University of Edinburgh.

That this Class may be attended, during the fourth year of the Curriculum, by the students of the Class of Moral Philosophy, for a small additional Fee; and that a full Fee shall be exigible from other students, or when attended in the fifth Session.

Provisional Resolutions.

Natural History.—That the Commissioners propose to recommend the establishment of a Professorship of Natural History in those Universities in which such Class does not now exist.

Higher Natural Philosophy.—That the Commissioners propose the institution of a higher or more advanced Class of Natural Philosophy, to be taught at a separate hour.

Degrees.

Degree of B.A.—That students who have completed the Curriculum of Study above prescribed, for four years, shall be qualified to be Candidates for the degree of *Bachelor* of *Arts*.

That this Academical Honour shall be conferred only on those Candidates who have had a regular University Education, and after a strict Examination, as after regulated.

That attendance at Oxford and Cambridge shall be allowed in computing the attendance required at a University during four years—under this condition, that in all cases attendance during the fourth Session of the Curriculum in the Universities of Scotland shall be required, in order to entitle such Candidates to obtain the degree of Bachelor of Arts.

Degree of A.M.—That previously to the degree of A.M. being conferred, attendance shall be required in the Classes of Natural History, Chemistry, Political Economy, and higher Natural Philosophy (where there are such Classes), and that the said degree shall not be conferred until after the lapse of at least one year, subsequent to the four years' Curriculum enjoined for the degree of Bachelor of Arts.

That attendance in the additional Classes required for the degree of A.M. may take place during any of the years of attendance at College, except in regard to the higher Natural Philosophy Class and the Class of Political Economy; neither of which shall be attended before the fourth year.

That the degree of A.M. shall be conferred only on Bachelors of Arts of the Universities of Scotland, with the under-mentioned exception.

That the degree of A.M. may be conferred on Bachelors of Arts of Oxford and Cambridge, and Trinity College, of Dublin, who shall attend the additional Classes above prescribed, and shall undergo the requisite Examinations.

That the degree of A.M. shall only be conferred after Examinations conducted in the same manner as Examinations for the degrees of B.A.

General Prizes.—That the Commissioners propose to recommend the institution of certain annual Prizes, open to competition among all the regular students of the Classes included in the Curriculum.

That the Commissioners propose to recommend the institution of certain annual Prizes, open to competition among all the students at the University.

Form of Certificates to Students leaving the several Classes.

Examinations for Degrees in Arts.

1. Bachelor of Arts.

The Commissioners, thinking it highly desirable to raise in public estimation the value of degrees in Arts, and to establish a uniform system in the requisite Examinations in the several Universities, propose the following plan:

That in order to obtain the degree of Bachelor of Arts, the Candidate must undergo an Examination with credit, in the following requisites:—

Latin.—That, in Latin, he shall be examined in two Decades of Livy, or in the Orations of Cicero, and in the whole of Virgil, or Horace, or Juvenal—translating the same either *vivâ voce*, or in writing, or both, as the Examiners may prescribe, and shall be called to perform Exercises in Latin Composition.

Greek.—That in Greek he shall be examined in Thucydides or Demosthenes, or Aristotle's Ethics or Rhetoric, in Prose—and in two Tragedies of Sophocles, or of Euripides, in Poetry.

That with regard to the Latin and Greek Examinations, the candidate to have his choice of which of the above-mentioned Authors he will be examined on; the Examinations comprehending both Prose and Poetry.

Mathematics.—In the 11th and 12th books of Euclid—Spherical Trigonometry—Conic Sections—Algebra, including Equations of the higher denominations.

Logic,
Natural Philosophy,
Moral Philosophy.

That in these branches of study, the candidates shall be examined in the subjects of the courses of the several classes.

In Logic, Mathematics, Natural Philosophy, and Moral Philosophy, Exercises, and written Examinations, to be performed in the presence of one or more of the Examiners.

The Senatus are requested to consider, Whether it would be most eligible to have two Classes for Honours, or only one.

That those who take the Degree of Bachelor with Honours shall be arranged in two classes—
One class—entitling candidates to *Honourable Distinction.*
Another class to be called the *Highest Class of Honours.*

That with reference to the proficiency or attainments necessary to entitle candidates either to

University of Edinburgh.

Provisional Resolutions.

Honourable Distinction or to *Highest* Honours, it is not expedient to specify, with the exception under-mentioned, any particular subjects of Examination as the test of merit, it being understood, that in general, candidates cannot be enrolled in either class for Honours, unless they undergo an Examination in a greater number of works or subjects than those in the class immediately inferior in the same year, except in some rare instances, where very singular and extraordinary proficiency and attainments in the subjects above specified may entitle the candidate, in the judgment of the Examiners, to Honourable Distinction.

That for *Honourable Distinction*, excellence in Latin composition, and in all the written exercises prescribed, shall be particularly required.

That in addition to what entitles to be classed for Honourable Distinction, the *Highest Honours* may be taken by candidates either in classical or scientific attainments.

That if *Highest* Honours are desired in classical attainments, good Greek, as well as Latin composition, in prose, shall be necessary, in addition to the attainments entitling candidates to Honourable Distinction, and a greater number of Latin and Greek authors must be professed.

That proofs of Composition must be given while the candidates are enclosed during the Examinations.

That if *Highest Honours* are desired in scientific attainments, the candidate must undergo an examination in some of the higher and more difficult branches of Science.

For Degree of Master of Arts.

Master of Arts.

That after attendance on the additional classes above-mentioned as necessary for the Degree of A.M., an Examination shall take place in the subjects of the courses of these classes—But

That the principal Examination to entitle to the Degree of A.M., shall take place in any branch of Literature, Philosophy, or Science, which the candidate may select—the Examination to be conducted in such a manner as to secure very high attainments.

General Rules.

General Rules for Examinations.

That there shall be six Examiners for the Degree of Bachelor, and four for the Degree of Master of Arts—of whom four and three respectively must be present at each Examination.

That the Examination for Degrees shall be conducted by sworn Examiners.

That the Examination shall be open to all who may choose to attend.

That the Examination shall commence
and the hours of Examination to be from ten till four.

That not more than six candidates shall be examined in one day.

That in order to be entitled to Honourable Distinction, or *Highest* Honours, in taking the Degree of Bachelor of Arts, candidates shall be taken for Examination on several days, and as often as the Examiners may deem necessary.

That the names of all the Bachelors and Masters of Arts shall be published—distinguishing, in the case of Bachelors of Arts, in separate lists, those who take *Highest* Honours, and those who take the Degree with Honourable Distinction.

That the Degrees of Bachelor and Master of Arts shall be conferred publicly at a University Meeting.

Table of Hours.

Scheme of Hours for the attendance of Classes forming the Faculty of Arts.

	Hours of first Meeting of Class.	Hours of second Meeting of Class.
Junior Humanity Class	From 11 to 1 o'clock.	
Senior do.	9 „ 10	from 2 to 3 o'clock.
1st Greek Class	10 „ 11	1 „ 2
2nd do.	8 „ 9	12 „ 1
3rd do.	3 „ 4	
1st Mathematical Class	10 „ 11	
2nd do.	1 „ 2	
Logic Class	9 „ 10	2 „ 3
Moral Philosophy Class	9 „ 10	2 „ 3
1st Natural Philosophy	11 „ 1	
2nd do.	2 „ 3	

Table of Fees.

Table of Fees proposed to be taken in those Classes forming the Curriculum of Study for a Degree in Arts.

There shall be no distinction of rank among students. No Primars, Secondars, or Ternars. No Professor in the Faculty of Arts to be entitled to charge more than £3 3*s*., from any student for one session. Those who attend the first and second Class not to be required to pay a third year.

Humanity.—1st Class	£3 3 0
2d do.	3 3 0
Greek.—1st Class	3 3 0
2nd do.	3 3 0
3rd do. Free to such as have previously paid twice. Such as have paid only once before, to pay £3 3*s*. Such as have not paid the fee once, to pay £4 4*s*.	
Mathematics.—1st Class	£3 3 0
2nd do.	3 3 0
If a 3rd do. such as have paid twice before, to pay	1 1 0
Such as have not paid twice, to pay	3 3 0
Logic Class	3 3 0
Moral Philosophy do.	3 3 0
Political Economy, to students of Moral Philosophy	1 1 0
To such as have not attended Moral Philosophy	3 3 0
Natural Philosophy Class	3 3 0

These Fees to be exigible in every University from all students, including Bursars, unless

927

University of Edinburgh.

Provisional Resolutions.

the exaction shall be found to be inconsistent with such foundations of Bursaries as are obligatory upon the respective Universities.

Applications for gratuitous attendance to be made to the Senatus Academicus, who are to judge of the circumstances.

Dues for Library	£0	7	6
All Class dues whatever	0	5	0

These two sums to be paid at enrolment, and no money to be allowed to be paid or received at any of the Classes for door-keepers, fires, cleaning, or other purposes.

THEOLOGICAL COURSE.

Professor of Systematic Theology.

First Class.—Evidences of Natural and Revealed Religion—comprehending the genuineness, authenticity, and inspiration of Scripture, and its sufficiency as a Rule of Faith. To meet one hour each day, for five days of the week,—three days for Lecture, and two for Examination. Session to be for six months.

This Class proposed to be open to all the Students of the University, who in that case shall pay the full fee.

Second Class.—Theology strictly so called—embracing the great Doctrines of Revelation, and the ground upon which they rest—View of Systematic Theology—Polity and Government of the Church—and the qualifications and duties of the pastoral office. Three lectures each week; and two hours for Examinations upon lectures, or upon standard Theological works appointed to be read by the students. Recommended, that the Professor of Divinity complete his proper Theological Course in three sessions.

Professor of Oriental Languages.

First Class.—Elements of Hebrew, and translation of the Historical books of the Old Testament. One hour for five days of the week.

Second Class.—Poetical and prophetical books of the Old Testament, Chaldee and Syriac—and occasional lectures on Hebrew antiquities, one hour for five days of the week.

Professor of Ecclesiastical History.

First Class.—Historical view of the Old Testament dispensation—Introduction of Christianity—Apostolic age, and Historical and Critical account of the Apostolic Fathers. To meet five hours a-week; four for Lecturing, and one for Examination.

Second Class.—History of the dissemination and establishment of Christianity—of the opinions which have been entertained as to its doctrines, its morality, and the various forms under which it has been administered. Five hours a-week; four for Lecturing, and one for Exercises and Examination.

Professor of Biblical Criticism.

Two Classes.—This department to be assigned to the Principal. The first class to meet five hours a-week; four for Lecturing, and one for Examinations and Exercises. The second class to meet three days a-week. Exercises and Addition delivered by the students, according to the requisition of the Church, to be heard by this Professor.

The session for the Theological classes to last for six months.

Distribution of the Theological Course.

First Year.—First class of Theological Professor—to be open to the students of the University—all but Theological students paying the stated fee of £3 3*s*.
First Hebrew class.
First class of Ecclesiastical History.

The Senatus are requested to take into consideration whether the Class of Ecclesiastical History shall be attended in the first and second—or in the second and third—or in the third and fourth years.

Second Year.—Second Hebrew class.
Second Theological class.
Second class of Ecclesiastical History.

Third Year.—Second Theological class continued.
Biblical Criticism.

Fourth Year.—Second Theological class continued.
Second class of Biblical Criticism.

The Discourses of the students required by the Church—after assigning the Exercises and Addition to the Professor of Biblical Criticism—to be heard and criticised by the Professor of Divinity, the Professor of Ecclesiastical History, and the Professor of Hebrew, if a Professor of Theology—in such manner as the Theological Faculty may arrange—the Discourses being delivered separately, before the respective Professors—and the judgment pronounced on them to be reported to the Professor of Divinity.

Hours for the different Theological Classes.

Table of Hours.

First Theological class	From 10	to	11 o'clock.	
First Hebrew class	11	„	12	
First Ecclesiastical History class	12	„	1	
Second Hebrew class	10	„	11	
Second Theology class	11	„	12	
Second Ecclesiastical History class	1	„	2	
First Biblical Criticism	2	„	3	
Second Biblical Criticism	1	„	2	
Discourses for three days of the week	9	„	10	
On Saturdays	12	„	2, if necessary, which will probably not be the case except in Edinburgh and Glasgow.	

Number of Hours to each Professor.

Hours to each Professor.

Professor of Divinity.—Three hours three days of the week; and two hours on the other three days.

Professor of Biblical Criticism.—Three hours three days of the week; and two hours on the other three days.

University of Edinburgh.

Provisional Resolutions.

Professor of Hebrew.—Two hours for five days of the week, if not a Professor of Divinity—if he be, and hear Discourses, three hours for three days of the week, and two hours for two.

Professor of Ecclesiastical History.—Two hours for six days of the week.

Degrees in Divinity.

Degrees in Divinity.—Degree of Bachelor of Divinity to be conferred on distinguished students who have regularly attended the Theological Course, and who, by submitting to an Examination on the Evidences and Doctrines of the Christian Revelation, on Biblical Criticism and Ecclesiastical History, have evinced that they are worthy of this Academical honour, provided that they have previously taken the Degree of Bachelor of Arts, or, if they have not, that they undergo a strict Examination upon Classical Literature and Moral Philosophy, such as is required from Candidates for the degree of Bachelor of Arts: the Examinations in both cases to be conducted by Examiners as already specified. The degree of Doctor of Divinity to be limited to those who have taken the Bachelor's degree, and who also are Masters of Arts. That the Examiners for degrees shall be the Theological Faculty, along with a Committee of the Presbytery of the bounds.

Fees proposed for Theological Course.

Table of Fees.

It appears to the majority of the Committee appointed to prepare a Table of Fees, that it is, upon the whole, expedient that students of Divinity should pay moderate Fees, as under—

	£.	s.	d.	
First Theological Class	1	1	0	
Second Theological Class	1	1	0	
Ditto—Second year	1	1	0	—the third year no fee.
First Ecclesiastical History	1	1	0	
Second Ecclesiastical History	1	1	0	
First Hebrew Class	2	2	0	
Second Hebrew Class	1	1	0	
Biblical Criticism, first year	2	2	0	
„ second year				No fee.
Fees of the Course	£10	10	0	

According to the above Table, students of Divinity will pay for the First Session of the Course, £4. 4*s.*; for the Second Session, £3 3*s.*; for the Third Session, £3 3*s.*; for the Fourth, no fees exacted.

The above Fees to be paid by all who are enrolled as students of Theology, whether attending regularly or otherwise.

LAW.

The Senatus of Edinburgh will suggest what Regulations will be most applicable to their particular University.

That the Curriculum of Study of Law ought to include attendance for three Sessions.

Civil Law.—That in the first year, Civil Law should be taught for two hours each day—one hour being employed in Lecturing, and the second in Examinations, Exercises, &c.

Scotch Law.—That the Course of Lectures on Scotch Law ought to extend over two Sessions, the Professor lecturing one hour daily in each Class, with a separate hour two days of the week, for each Class for Examinations.

That the Examinations shall be required from all students in Law, in order to entitle them to a Certificate of attendance.

That during the first year's attendance on the Law Classes, it is expedient that the Class of Civil Law alone should be attended—and that to secure this object, the Class of Civil Law, and the first Class of the Professor of Scotch Law, ought to meet at the same hour.

That the Session for the Law Classes shall be six months.

N.B. The Senatus of the University of Edinburgh are requested to state whether attendance on the Class of Conveyancing ought to be required, and, if so, in what year.

MEDICAL COURSE.

Medical Course.

That the general attainments of Candidates for the degree of M.D. shall embrace a liberal Education in Latin and Greek, with the addition of Mathematics, Natural Philosophy, and the French Language. That in order to ascertain their proficiency in these respects, an Examination, *previous to the Examination* for the said degree, shall take place. The Senatus are requested to point out the mode which they think best for conducting both of these Examinations, and to suggest who ought to be the Examiners for each,—how they should be chosen,—and how remunerated, without the remuneration varying with the number of degrees.

Course of Medical Study.

1*st Year*, Winter—Anatomy, Chemistry, Materia Medica.

I. Summer—Natural History, Practical Chemistry, and Pharmacy. Practical Chemistry and Pharmacy may be taken with a private Lecturer, when not taught in the University.

2*nd Year*, Winter—Anatomy, Practical Anatomy, Theory of Medicine, Surgery.

II. Summer—Botany, Infirmary, Clinical Surgery.

3*rd Year*, Winter—Practice of Medicine, Midwifery, Infirmary, either Clinical Surgery or Clinical Medicine, or attendance on the ordinary Physicians of the Infirmary, when there is no Professor of Clinical Medicine or Surgery giving Lectures in the Infirmary.

III. Summer—Infirmary, Clinical Medicine, Clinical Midwifery, Military Surgery, Course of Pathology.

4*th Year*, Winter—Practice of Medicine, Infirmary, Clinical Medicine, Medical Jurisprudence.

For *regular* students, attendance on the Lectures and Infirmary, during the Summer of their fourth year, proposed to be gratis.

Attendance on a second Course of Chemistry will be required, but attendance for the second Course with a Private Lecturer for a Course of six months, will be permitted.

929

University of Edinburgh.

Provisional Resolutions.

In order to entitle attendance with a Private Lecturer to be taken into account, such Lecturers must adapt the length of their Course to the Regulations of the University—must adopt the form of Certificate prescribed for the Universities, and must report themselves to the Senatus as intending to do so; and when irregularities occur, it shall be in the power of the Medical Faculty to report the same to the Senatus, as a ground on which the latter may hold the attendance on such Private Lecturer not to be adequate.

The Summer Session proposed to be five months, and the Winter Session six months.

Examinations in the Medical Classes to be imperative on all students attending the several Classes for the first time, and also on those attending the Classes of Anatomy and Practice of Medicine for the second time, but with the exception, in all cases, of persons not enrolling themselves as Medical students—in which latter case no certificate of attendance to be given, and the attendance not to qualify for any Medical degree.

A Catalogue to be called daily in the Medical Classes, and the same form of Certificate to be used as in the other Classes.

All the Medical Classes to belong to the Medical Faculty.

It is proposed to recommend the institution of a separate Professor of Surgery in the College of Edinburgh, by separating Surgery from Anatomy, as has been done at Glasgow.

It is proposed to recommend the institution of a separate Chair, in the University of Glasgow, for the Theory of Medicine.

It is proposed to recommend the institution of a Professor of Pathology, distinct from the Class of the Theory of Medicine.

It is proposed, that when the candidate for the degree of M.D. has taken the degree of A.M., the degree to be conferred shall be that of Doctor in Medicine and Philosophy, and the same shall be conferred at a public meeting of the University.

Scheme of Hours suggested for Attendance on the Medical Classes :—

Scheme of Hours.

1*st Year*, WINTER	Anatomy	9 to 10	10 to 11 twice a-week for Examinations.
„ „	Chemistry	11 to 12	
„ „	Materia Medica	1 to 2	
„ SUMMER	Practical Chemistry and Pharmacy	8 to 10	3 to 4 twice a week, or oftener, for Examinations and exhibition of Specimens.
„ „	Natural History	11 to 12	
2*nd Year*, WINTER	Anatomy	9 to 10	3 to 4 twice a-week for Examinations.
„ „	Theory of Medicine	8 to 9

4*th Year*, WINTER	Practice of Medicine	9 to 10	2 to 3 twice a-week for Examinations.
„ „	Medical Jurisprudence	8 to 9	
„ „	Infirmary—Clinical Medicine.		

PROPOSALS FOR CONSIDERATION.

Proposals for Consideration.

Right of Property in Apparatus.

That when a Professor is appointed to any particular Class, to which any collection of instruments, philosophical apparatus, models, drawings, or preparations, or any collection intended for the purposes of the Class, is attached, a distinct catalogue, descriptive of the articles of such collection, shall be made out, subscribed by the Professor and Principal, and carefully preserved: That Professors making use of any articles belonging to themselves, and deposited generally in the University, shall annually give in to the Principal of the University a list of the same: That in the event of the death of any Professor, all articles in the collection, belonging to any Class, shall be taken to belong to the University, when the same do not appear in the said lists of articles belonging to the individual Professor, unless they can be proved to be acquired or brought to the college by him since the date of the annual list given in during the preceding year.

Catalogue.

That a Catalogue be called at each hour of meeting, in all the Classes of the College, and a note taken of the attendance of the students, by which the Professor, in granting Certificates, may be regulated.

That in very numerous Classes, the Class be called over by Censors, in Sections of the Class, or in any other manner, calculated to attain the end without loss of time.

Chapel Service.

That Divine Worship shall be performed in the University Chapel, by the Principal and Divinity Professors, and by such other Professors, hereafter to be appointed, as have been licensed by the Church of Scotland, in rotation, during the Winter Session of the College.

Some of the Professors in rotation always to attend in the Chapel.

Subscription of Confession of Faith.

That the subscription to the Confession of Faith and Formula of the Church of Scotland, by Professors before their induction, should be enforced, in terms of the Act of Parliament.

Joint-Professors, Assistants, and Successors, &c.

That in future no appointments shall be allowed of Joint-Professors, or of Assistants and Successors, except in the case of insanity, as after provided.

That in the event of a Professor becoming unfit for the discharge of his duties, in consequence of infirmities or old age, he shall be entitled, in the Universities of Edinburgh and Glasgow, after resignation, to draw a certain proportion of the Fees payable to his Successor; provided always,

University of Edinburgh.

Proposals for Consideration.

that such resignation shall be approved of as necessary, by the Chancellor and his Court of Assessors.

That in the other Universities it is desirable that some provision should be made for a retiring allowance for a Professor, in the above circumstances, either by drawing a proportion of the Salary and Emoluments, or from some other source.

That it shall be in the power of the Chancellor and his Court, upon proper cause shown, to direct the resignation of any Professor when, from the above causes, he shall be unfit for the duty of Professor, giving him right to the above proportion of the Fees payable to the Successor; or, in the event of insanity, to authorize the appointment of a Joint Professor on the same footing.

Qualification of Professors.

That from and after the time when the Regulations of the Commission shall be promulgated, no persons entering the University shall be capable of filling the Chairs of Professors in the Universities, who have not taken the degrees of Master of Arts, or Bachelor of Arts with First Class honours, and also of Bachelor of Divinity in regard to the Theological Faculty.

Christmas Vacation.

That the Christmas Vacation shall not be longer than three days.

Professorial Librarian, Factor, &c.

That none of the Professors should hold the situations of Librarian, Factor, or other responsible situations in the University.

Latin and Greek Chairs, Edinburgh and Glasgow.

That it is expedient that there should in future be two Professors of Latin, and two Professors of Greek, in the Universities of Edinburgh and Glasgow;—such arrangement to take effect on the occasion of any vacancy occurring by the death or resignation of any of the present Professors of the Classes of Humanity or Greek.

SCHEME PROPOSED FOR THE CONSTITUTION OF THE UNIVERSITY OF EDINBURGH.

Constitution of University of Edinburgh.

That there shall be a Chancellor;—

To be named by the Crown, and to continue in office for life—through whom all communications from the Rectorial Court, as afterwards constituted, to the Crown, shall pass—to be entitled to preside in all University meetings, and, on application, or for the consideration of any matters concerning the University, to summon and direct a Rectorial Court to be held.

The Chancellor to nominate a Vice-Chancellor, who shall continue in office for seven years, to officiate and preside in University meetings in his absence, with the exception of the ordinary meetings of the Senatus Academicus.

Rectorial Court.

The business of the University to be transacted by a Rectorial Court, in which the government of the University, and the general superintendence of the whole concerns, economy, and discipline shall be vested.

This Court to consist of

1. A Rector—as the Head or President of the Court.

The Rector to be chosen by the Principal, Professors, and the Graduates of the University—to continue in office seven years. The Rector to go out of office on the 1st of January, seven years after his election, and the new Rector to be chosen in the month of October preceding; the day of election to be fixed by the Rectorial Court, of which three months' previous notice to be publicly given. The Rector may be again eligible for the same office.

That in every future election after the first, the Graduates, in order to be entitled to vote for the Rector, must have their names on the University books, according to a regulation to be hereinafter mentioned.

The Rector, by acceptance, to undertake personally to perform the duties of the office, and to be present at the Rectorial Courts when not necessarily prevented from attendance.

2. The Vice-Chancellor.
3. The Principal of the College for the time being.
4. } Three Assessors, one to be named by the Rector, one by the Town Council of Edinburgh, and
5. } one to be elected by the Principal, Professors, and the Graduates—all to be chosen for the
6. } space of seven years. The qualification of the last-named Assessor to be—a member of any of the learned professions, Church, Bar, or Medicine; if of the latter, to be a member of the Royal College of Physicians or Surgeons, or a Professor in the University, or any Graduate of ditto.

The Rector to have a deliberative and casting vote, and in his absence, the members to preside according to the above order. In the event of the death of the Rector during the aforesaid period of seven years, the vacancy shall be filled up by a new election, to take place within six months, on a day to be fixed by the Chancellor.

Rector's Court to have a power of review over all decisions of the Senatus, and to be a Court of Appeal in every case.

" to have a power to originate all improvements in the internal system of the University, not inconsistent with the Statutes of Visitation.

" to issue injunctions to Professors, in order to enforce punctual attention to all the regulations which may be enacted in regard to the mode of teaching in the Universities, or other duties imposed on the Professors.

" to receive all complaints from Students, Parents, Professors, or others.

" to rectify all abuses to which their attention may be called.

The Rector to be empowered to call a Rectorial Court, to reconsider any acts and decisions of any meeting of the Court at which he may not have been present; such Court to be summoned within one month from the date of the act or decision to be reconsidered.

The Rector to have no power to act, except by and with the advice, and through the medium of the Court.

9.31

University of Edinburgh.

Proposals for Consideration.

The induction of the Chancellor to take place within a year, and that of the Rector within three months of the election.

A Rectorial Court to be then held, after public intimation.

And a Court to be held once a-year, in the month of April.

The Rector and other members of the Court on the spot, to attend at the meeting of the University when Degrees are conferred.

General Prizes to be conferred at the time of the meeting of the Court in the end of April.

The ordinary discipline of the University to be vested in the Principal and Professors—subject to the review of the Rectorial Court.

The meetings, both of the Senatus and of the Rector's Court, to be open to the public when sitting, in a judicial capacity, unless, in the opinion of the meeting, the peculiar nature of the case shall render publicity improper.

Syllabus.

That within years after his appointment, each Professor shall publish a Syllabus or Outline of the General Subjects of his Course of Lectures.

Tutors.

That it is desirable, if possible, to establish in the Universities the system of teaching by Tutors, in addition to the public teaching by the Professors, and in subordination thereto.

That for this purpose the Senatus Academicus of each University should name a certain number of persons to act as Tutors, from among those who, having been students in Arts and Philosophy, had passed through the Curriculum with known credit. It should be understood that, after the new system shall have been long enough in operation to secure a supply, these Tutors should be selected from such Masters of Arts as should have taken the degree of Bachelor with distinction.

It is desirable that a Fund should be established, from which per session should be paid to each Tutor, who should have no right to demand any fee, but should have full permission to accept fees from those among his Pupils who might be disposed to offer them.

That the public duty of the Tutors should be to instruct, in the after part of the day and in the evening, the students of the Language, Mathematical and Logic Classes, in the books used, and on the subjects treated of by the Professors of those branches, to assist them in their studies, and to examine them, with a view to ascertain their progress, and excite them to application and exertion.

That for this purpose, the several Classes before mentioned should be divided among the Tutors, in such manner, and according to such proportions, as the varying numbers and circumstances of the Universities may seem to require.

In some of the Colleges a certain number of the Tutors ought, perhaps, to be appropriated to the Language Classes, while the students of Logic and Mathematics might be divided among the rest. In others of the Colleges, such a division might be uncalled for, the numbers of the students being small; but in all the Colleges every Tutor should be *capable* of instructing Pupils in all the above-mentioned branches of Literature and Science.

It is conceived that attendance on those Tutors should be imperative, unless the parents or guardians of a student should, in person or in writing, make it known to the Professors whose classes his son or ward is about to attend, that he is under the care of a Private Tutor, fully qualified to carry him on in the studies he is to prosecute; *or*, unless from particular circumstances, of which the Professors are to judge, they shall deem it more for the advantage of a student that he should follow his studies in private only.

It is proposed that the Tutors should be under the immediate control of the Professors to whose classes they are attached, and subject to the superintending authority of the Senatus Academicus.

It is deemed well worthy of consideration, whether the duty of the Tutor should be merely to go on daily with the work of the class, or whether, in the Language department especially, he should not extend the sphere of his usefulness and efficiency, by encouraging his Pupils to profess the whole or considerable parts of the authors they are studying, or even of other authors connected with the branches in the study of which they are engaged,—and by examining them in those authors in such manner as not only to ascertain their progress in Classical acquirement, but their improvement in such branches of History, Antiquities, or Philosophy, as may form the subject-matter of the books they are reading.

It is also worthy of consideration, whether it might not be permitted to the Tutors to give such portions of their time as they can spare, after the performance of their regular duties, to the more private tuition of those among their Pupils who, under the sanction of the Professors, may be desirous of profiting by their assistance.

These suggestions are submitted for deliberation—not without a sense of the difficulties that may present themselves to the general application of the proposed plan to the Scottish Universities—and it is felt, of course, that one of the chief impediments will be, the difficulty of finding an adequate fund for the remuneration and fitting maintenance of the Tutors.

It is possible that in some of the Universities the consolidation of Bursaries might, if on other grounds just and reasonable, to a certain extent answer the proposed end; but should *other means* be withheld, it is obvious that no such plan can be proposed as a general and permanent arrangement in all our Colleges. Supposing, however, that the system as suggested were not to be adopted, it remains for consideration whether it would not be desirable to permit the nomination of Tutors by the Senatus, to be paid by fees, for the benefit of such students as might be desirous of such aid and assistance in the prosecution of their studies—it being enjoined to the Principal and the Professors of the enumerated Classes, to encourage, by the sanction of their advice and recommendation, all those students who manifested any desire to avail themselves of the means thus afforded for their improvement.

Union of Chairs.

[The Commissioners determined that the discussion, upon the principle contained in the following paper, shall be taken under separate heads:—1*st*, As to the expediency or not, of allowing a union between the Language and Philosophical Chairs, and the Minister of a Parish Church; 2*dly*, Whether or not such a union should be permitted with the Chairs in the Theological Faculty; and 3*dly*, As to the incompatibility or not of the Professors of the Language and Philosophical Classes being engaged in an active secular employment. *Extract from Minutes and Proceedings of the Commissioners.*]

University of Edinburgh.

Proposals for Consideration.

The Commissioners, taking into consideration the nature of the office of a Professor in a University in Scotland, the extent of duty assigned to each Professor by the regulations proposed by the Commissioners, and the great importance of that activity, zeal, and undivided attention, in the discharge of the Professorial duties, which their regulations are intended to encourage,—are of opinion, that it is not expedient that any Professorship in the Universities should be held along with a Benefice in the Church, to which a Cure of Souls or stated Pastoral duties are attached; and they do therefore recommend that a positive law to this effect shall be established in all the Universities, to be enforced by the proper University authorities.

But the Commissioners, farther considering the importance of preserving the connexion which has hitherto subsisted between the Universities and the Church of Scotland, and of effectually securing the purity of the Theological Faculties in the several Universities,—and considering that it is not necessary or expedient for them to form any collective judgment or opinion on any controverted question which may exist as to the rights or duties of Professors of Theology as Members of the Church Courts, or as to their subjection under the existing laws to the jurisdiction of those Courts, —are of opinion, That without compromising or abridging the powers of the Church to exercise superintendence over all Professors in any of the Universities, under the existing laws of Scotland, it ought to be an indispensable qualification in every Professor of Theology, including the Professor of Hebrew or Oriental Languages, that he shall be an ordained Minister of the Established Church of Scotland (or at least a licensed Preacher therein); and that, in case any such Professor in the Faculty of Theology shall, by any lawful proceeding in the Church Courts, be deposed from the office of the Holy Ministry (or deprived of his license to preach), or shall be suspended in the exercise thereof, on account of Heretical doctrine, whether taught in the University, or otherwise promulgated, or any other Ecclesiastical cause,—such sentence of the Church Court ought, *ipso facto*, to infer a deprivation of his office, or a suspension of his functions, as a Professor in the University; and they recommend a law to this effect to be established, at the same time with the regulation prohibiting a Professor from holding a Church Benefice.

The Commissioners are farther of opinion, that it is not expedient that a Professorship in any of the Language or Philosophy Classes (*viz.* the Humanity, Greek, Logic, Moral Philosophy, Mathematics, and Natural Philosophy) should be held by any person who is at the same time engaged in any active secular profession or calling; and they recommend, that a Law to this effect ought to be in like manner established.

CONSIDERATIONS submitted to the Royal Commissioners for visiting the Universities of Scotland, on the part of the SENATUS ACADEMICUS OF THE UNIVERSITY OF EDINBURGH; with Reports from the several Faculties of that University.

Considerations submitted by the Senatus Academicus.

THE Senatus Academicus have received, and with the most respectful attention perused, the scheme of provisional regulations, which the Commissioners appointed by his Majesty for visiting the Universities and Colleges in Scotland have done them the honour to transmit to them.

As the regulations in that scheme are directed to the better arrangement of the studies comprehended in the several Faculties of the University, the Senatus Academicus thought that they should best discharge their duty to the Commissioners, and to the public, by referring to each Faculty, for consideration, what was proposed in relation to the department under its peculiar charge.

From these Faculties, Reports have been received, containing much valuable information, and many useful suggestions. And as it appears to be the most suitable course to lay them before the Commissioners, in the shape in which they were received, they will be found hereunto subjoined.

At the same time, the Senatus Academicus beg leave to solicit the attention of the Commissioners to some considerations touching the general interests and state of the University, and its relations to the public. They trust that, in what they have now to submit, and in the suggestions contained in the several Reports, they shall not be accused of receiving without due gratitude the suggestions of the Commissioners; or be suspected of any backwardness in acknowledging errors, or in adopting the proper remedies. They beg leave to assure the Commissioners that they will most heartily co-operate in everything by which science and learning may be advanced in this great seminary. But while they disclaim all those feelings of jealousy in regard to interference, with which learned bodies have sometimes been charged, they yet hold it to be their duty freely to expostulate on the tendency of some of the regulations which have been proposed. They are sure that those regulations were not sent to them merely for acquiescence; and to persons so eminent as those to whom they now address themselves, anything like the language of compliment, for their zeal and attention to the public interests of learning, would be superfluous or insulting.

Before turning their attention particularly to the scheme of provisional regulations, the Senatus Academicus must express their disappointment and regret to find, that nothing has been intimated to them of any design on the part of the Commissioners to direct their attention to the great and pressing inquiry concerning the constitution of this University. To obtain a settlement of that constitution, on a footing consistent with the interests of learning, was the object which moved the Senatus Academicus humbly to solicit the exercise of his Majesty's visitorial powers. The want of a well-defined constitution has of late years formed the only obstruction to the labours of a University which, even under that disadvantage, is one of the most successful and best attended in Europe. But this great object appears to have been lost sight of; while matters which did not require the exertion of the high powers of this Commission, seem alone to have been thought worthy of attention.

In soliciting the attention of the Commissioners to this important subject, and to the considerations and Reports here submitted to them, it seems to be necessary to call to mind the peculiar situation in which the University stands, and the nature of the application which preceded the Commission.

The University of Edinburgh is not supported and protected (like the Universities of England), by corporation privileges and immunities, benefices and opulent livings. It is nothing more than a public and free school for instruction in the sciences and literature, with the single privilege of conferring academical degrees. Its professors have no salaries, or salaries so small that its incumbents may be regarded as entirely dependent for success and emolument upon their own exertions. Their degrees are chiefly honorary, the only professional degree being in Medicine, and conferring no mono-

933

University of Edinburgh.

Considerations submitted by the Senatus Academicus.

poly or privilege. This character of a public school of science and literature, unsupported but by the merits of its professors, forms the strength as well as the weakness of the University of Edinburgh. Depending for success, and for the emoluments of its teachers, on the reputation and usefulness of the instruction here to be received, it has seldom exhibited any of the faults of richly-endowed and privileged Universities. It has never been (as they sometimes have been called) the last retreat of prejudice; but, on the contrary, improvement has ever found here its most zealous supporters. It was within its walls that the philosophy of Newton was first publicly taught, and made a subject of trial for academical honours. The science of mind has here been cultivated with eminent success; Mathematics, Physics, Chemistry, and Medicine, have been adorned by some of their greatest improvements and most brilliant discoveries. Amidst difficulties of no common description, with an unsettled constitution, a distracted and interrupted administration, and funds the most inadequate for every purpose of a public institution of learning, this University has ever maintained its superiority; and, at this moment, the number of its students is such as rank it with the most numerously attended Universities of Europe.

It was not, therefore, from any complaint on the part of the public, that the present Commission took its rise. It was mainly upon the application of the Senatus Academicus itself, that his Majesty was pleased to institute the existing visitation; and it may be gravely doubted, whether any application for such a measure, from any other quarter, would have received the Royal assent, if, whilst it admitted, as it necessarily must, that the University was in all respects flourishing, and that there was no failure of duty, no want of science, no faults of doctrine on the part of the teachers, it should have stated, that it was nevertheless called for with a view to the introduction of some speculative reforms and changes in the modes of teaching, and in the Curricula of Studies.

The Senatus Academicus had found, that from certain doubts relative to the original constitution of the University, their administrative powers were interrupted even in matters the most peculiarly belonging to their functions, and most entirely depending on their own responsibility. And the time that ought to have been devoted to the duties of their Chairs, was most unprofitably wasted in perpetual and almost daily contests with their patrons, the magistrates of Edinburgh. It was for the purpose of having those questions settled and composed, and their powers of useful administration for the improvement of study in science and in literature established, that the Senatus Academicus entreated this gracious interference of his Majesty.

In their petition, after having stated the contests which had arisen relative to Medical Degrees, the Senatus Academicus humbly represented to his Majesty, that—"Your Majesty's petitioners have "found themselves threatened by the Provost, Bailies, and Council of the Burgh of Edinburgh, with "certain proceedings in the courts of law, and with other unusual modes of interference in the con- "duct of academical affairs, which, if persisted in, could not fail to be productive of the most baleful "effects, by subverting the very foundations of academical discipline, by introducing disorder and "anarchy into an establishment wherein order and tranquillity are essential to its prosperity and use- "fulness, and by tarnishing the reputation and lustre of this ancient seat of learning and science."— "That in this situation, at once so new and so painful, your Majesty's humble petitioners have felt "it to be their duty, as they trust it will be held to be their right, to approach your Majesty, as the "paramount protector and patron of the University, and most earnestly as humbly to entreat your "Majesty to interpose for their relief, by exercising your Majesty's undoubted prerogative of Royal "visitation, in the appointment of Commissioners for investigating such matters in the constitution "and discipline of the College, as may appear to be in dispute between the Senatus Academicus and "the Provost, Bailies, Council, and Community of the Burgh of Edinburgh, as grants of the Crown, "and intermediate patrons of the University, for enacting and declaring whatever may be found "essential to the prosperous and peaceful conduct of the most important academical establishment in "this part of your Majesty's dominions."

In granting the prayer of this humble and most necessary application, it was, indeed, to be expected that when his Majesty's attention was called to the affairs of the University, his view should reach beyond the immediate objects of the petition; and in an age in which such rapid advances have been made in science and in the art of education, it was natural that his Majesty should extend his Royal care beyond the original motion which suggested the Commission, to the effect of giving larger powers of inquiry and regulation, than that application might seem to demand. All inquiry into such institutions is useful to the public; and to the most minute investigation into everything relating to this University, the Senatus Academicus have lent their cordial aid.

They have undoubtedly to regret that the inquiries into which the Commission was pleased to enter, were conducted in a manner to which the members of the University had so little been accustomed. They humbly think, that had the professors been previously made aware of the points to which their several examinations were to be directed, they could have supplied the Commissioners with much more valuable and matured information than, under the method actually followed, they were able to furnish.

While it thus appears to the Senatus Academicus, that the primary object of the application has so far been superseded by an inquiry less imperiously called for, it is their duty to represent to the Commissioners, that the causes which existed for that application have not been removed. After the appointment of the Commission, the Senatus Academicus made the most strenuous exertions to induce the patrons of the University to concur in referring to the Commissioners all questions between them, for the purpose of having a wise and salutary arrangement formed of the whole constitution of the University—but in vain. The patrons resisted this, and pressed for a decision at law. Even at the moment in which the Senatus Academicus are addressing the Commissioners, they are involved in a dispute before the patrons, and are called upon to engage in printed arguments, derogatory to the dignity, interrupting the harmony, and wasting the time of the Senatus Academicus, and of its members, who ought to be left uninterruptedly to pursue their public duties.

These considerations are too serious not to call on the Commissioners (and the Senatus Academicus most earnestly press it upon their attention) to resume the most important inquiry which the Commissioners could pursue—that of fixing a Constitution for the University.

In turning to the consideration of the provisional regulations, the Senatus Academicus would, with humble deference, beg the Commissioners to consider whether, in the course of the investigation into which they have entered, grounds have been discovered for legislative interference, relative to the discipline of this College; or, at least, for interference to the extent which has been proposed.

There is no evil (short of the corruption or remissness which is said sometimes to creep over richly-endowed seminaries) which is on the whole so detrimental to an University, as too great an extension

University of Edinburgh.

Considerations submitted by the Senatus Academicus.

of legislative interferenee. Such interference is almost as invariably hurtful, in what relates to the supplying of the demand for public instruction, as it has been found to be in the more vulgar matters of trade and commerce. It is no doubt the duty of Government to interfere wherever public complaints have been made; or, it may be a duty even spontaneously to relax the privileges and rules of protected corporations, where that may be required, in order to adapt them to the altered spirit of the age. But it deserves very grave consideration, how far it may be safe or expedient, on merely speculative views, to interfere with a school such as the University of Edinburgh.

Two bad effects almost necessarily result from such attempts—on the one hand, the degradation of the masters or professors; and, on the other, the establishing of absolute rules which come afterwards to narrow the field of improvement, and prevent those spontaneous exertions of teachers and of students, from which the most valuable advances in study are always derived. It seems, indeed, to be a truth undeniable, that the spirit of improvement is scarcely ever to be promoted by compulsory regulations. Excellence is not to be forced, either in teachers or in pupils; but is the fruit of voluntary and generous exertion. It flourishes best under the unobstructed influence of public opinion; by the natural desire of the master to fulfil the expectations of those who seek his instructions; by the enthusiasm of students inspired by their master's zeal; and by that accordance which never fails to be established (where freedom is given to exertion), between the demands of the pupil on the one hand, and the usefulness and ardour of the professor on the other. It is thus that in free and unprotected Colleges, like that of Edinburgh, there is found, without the aid of compulsory rules, a perennial spring of improvement, the force and efficacy of which it is the tendency of minute regulations to destroy.

In considering the general tendency and aspect of the regulations proposed, two observations very forcibly impress themselves on the Senatus Academicus. *First*, That of those regulations, so far as practicable, some had already been established, or put in a course of experiment, by professors zealous to improve all the means of study: and, *secondly*, That others of the suggested regulations are not perfectly consistent with the settled arrangements of professional life, or with the means or opportunities of the students. In the former class are to be ranked the improvements carrying on and projected by individual professors in their plan and method of teaching; and in their system of examinations; and the prizes for particular merits, or for general excellence. Of the latter class, examples occur in the proposed Board of previous Examiners; in the extension of the terms of attendance at College; in the increase of the number of hours for teaching; in the show exhibitions towards the end of the several courses; and in the general disregard of the pecuniary and other means which students have, for complying with the requisite attendance.

As to the former class of regulations, however much they may deserve approbation, and may be proper for adoption, it is not unworthy the attention of the Commissioners, that by their enacting as regulations what has already been done, or is in progress on the part of the Professors, all the grace of voluntary exertion and zeal is destroyed; while the Professors are exposed to the imputation of being averse to improvement, and of requiring to be compelled into that very course of beneficial instruction which they themselves have suggested, or been active in establishing. This, it is submitted, is neither wise nor just; and it is mainly objectionable, as tending to interrupt that generous feeling of gratitude and attachment on the part of Students, which is the highest reward of the efforts of a zealous Professor.

To those regulations, again, which have not already been adopted, and which their experience has not suggested to the Professors as useful, but which seem to be the result of speculative views of excellence in teaching, some particular objections have been stated in the Reports of the several Faculties, which deserve the serious attention of the Commissioners; but on this subject the Senatus Academicus would farther beg leave to suggest one or two remarks. And

1. Of all matters which can be made the subject of regulation by enactment, the art of education is the one in which, above the rest, experiment only ought to guide theory; and theory as seldom as possible to be reduced to enactment. Hardly anything of value in the art of teaching can be advanced, which is not founded on large and direct experience. It has been observed by one who knew the subject well, that "for want of experience in this, the greatest geniuses have been the "greatest visionaries, laying schemes the least capable of being reduced to practice, or the most absurd, "if they had been put in execution."

2. Even supposing there were no practical difficulties in the arranging of hours of attendance, there does not seem to the Senatus Academicus to be occasion for the proposed extension of the hours of teaching in the several professorships. It is not found to be necessary, and has not been called for; and in all likelihood, if at all submitted to by Students, would be productive of anything but advantage. Exhaustion, lassitude, and disgust to the Student, would be the most probable result; while the necessity of sacrificing so much time uselessly, on the part of the Professor, would banish from the University men of eminent talents, and high professional respectability.

3. The extension of the Winter Courses of Lectures to six months, and the Summer Courses to five, leading in some departments to a protracted attendance of eleven months, would be unfavourable to study, and would, in many cases, prove inconsistent with the other occupations and means of the Student. There can be no greater mistake, than that of viewing the value of a course of lectures, as being in proportion to its length: Nor is it true that education is best conducted under the perpetual inspection of a teacher. On the contrary, no man is well taught who is not in a great measure his own teacher; and by far the most successful courses of public instruction are those which, without wearing out the enthusiasm of the student, open to his view the general principles, relations, and boundaries of a science, and send him home to a vigorous prosecution of his private investigations, in that line of study which the Master has pointed out for him. It is apt to be forgotten, that, during the time of his attendance at Classes, a Student has little, sometimes no time at all, for private study—and that his exertions in that way are reserved for what are called the vacations at College, but which, with worthy Students, is the time most ardently employed in acquiring knowledge. The happiest efforts of a Student, and his most successful advances, are made in the intervals which succeed a well-conducted course of lectures; and the Senatus Academicus are persuaded, that much harm is likely to ensue from adopting the notions and methods of certain new schools, in which it seems to be imagined, that no course of instruction can be perfect, which is not protracted during many months. But besides the effect on the minds of the Students, the avocations in which many of them are necessarily engaged, and the limited state of the finances of young men in such a country as Scotland, make it impossible for them to continue their attendance beyond a term of five, or, at the most, of six months.

9,35

University of Edinburgh.

The arrangement of the hours of teaching requires a perpetual attention to the avocations and extra-academical studies and pursuits of the students, which make it quite an unfit subject for legislative enactment or regulation. And the Senatus Academicus would add in general, with regard to all these regulations of time, and hours, and length of courses, that it is very necessary to recollect the character of this College, as rather a great metropolitan school than a University. In English Universities, the students live in College. Their time is entirely at the disposal of the University—their attendance is required only within their own College—they have no avocations beyond its walls—no duties that do not belong to the University. But here, a number of students are immersed in the business of the world while at College. They live scattered through all the parts of this great city; their avocations in every professional department confine them to particular hours; they have to make a compromise between their studies as academical pupils, and their occupations under other teachers and task-masters. This peculiarity of situation ought never to be forgot, in forming regulations for the University; and the Senatus Academicus do assure the Commissioners, that they have experienced a degree of difficulty in arranging the points of attendance at College, which will not easily be believed, and that, after the hours have once been fixed and acquiesced in, they become part of the arrangements of other establishments, professions, and teachers, who will not submit to be again interfered with. The Senatus Academicus are satisfied, that any attempt speculatively to improve or extend the means of study, unaccompanied by due attention to the capabilities and opportunities of students, instead of doing good, will be productive of much evil—will obstruct education, or lead to extra-academical establishments.

Considerations submitted by the Senatus Academicus.

4. The Commissioners have indicated some opinions, and pointed out some arrangements, with regard to courses of study which ought to be supplied, and with regard also to the curriculum or course of study in particular departments or faculties. On this subject, the Senatus Academicus would refer to the remarks of the several faculties.

As connected with the proposed curriculum of arts, it seems not out of place here for the Senatus to beg a very serious reconsideration of the proposed Board of Examiners preliminary to the admission of students to University education. The Senatus Academicus have considered this proposal with the most grave deliberation, and beg leave to express their unanimous and decided disapprobation of any such institution. This point is treated at some length in the Report of the Faculty of Arts, and to the grounds there assigned for departing from this proposal, the Senatus Academicus beg to call the serious attention of the Commissioners. The proposal appears to them wholly unnecessary—pregnant with consequences the most dangerous, unjust, and cruel—and encroaching so much on the rights of the public to have free access to the schools of learning, as would probably lead to great discontent.

5. In the letter with which the Chairman of the Commission did them the honour of accompanying the provisional resolutions, the attention of the Senatus Academicus is in a particular manner directed to the scheme of fees recommended by the Commissioners. On this subject some observations will be found in the Report of the Faculty of Arts. But the Senatus have to observe that, disregarding all vulgar imputations of selfish motives, they think it to be their duty to take notice of this matter, in so far as it stands connected with those great principles on which a national establishment of this kind ought to be regulated.

It deeply concerns the interest of the public, and of every student in the University, that such provisions shall be made as shall secure to the University the aid of professors of eminent talents and great acquirements. And in order to do so, there must ever be maintained a due proportion between the condition of successful professional men and that of academical professors. At a time when talents little raised above the common rate, and a limited compass of knowledge, may enable a man in the profession of the law or of medicine to raise an annual income of 1000*l.*, or 1500*l.*, or 2000*l.*—if a teacher of philosophy or science, however eminent, can realize no more than 500*l.*, or 600*l.*, or 700*l.*—if the Principal shall be allowed only so miserable a salary as 150*l.*—and if the attack of disease shall leave such persons without any retiring salary during a season of incapacity,—how shall the public expect that men of eminent talent and extensive knowledge or acquirements shall devote themselves to the labours of a College life? This is undoubtedly the test to be applied in a comprehensive consideration of such a question, and it suggests irresistibly many views connected with the condition of society in this country, to which it is incumbent on the Commissioners to direct their attention in deliberating on this subject.

It is very true, that large endowments and rich livings secured to professors and members of Colleges are apt to induce indolence, supineness, and neglect of duty. But this cannot happen in a University like that of Edinburgh, in which the emolument entirely depends on the teacher's eminence and the number of his pupils; and where there is no want of the most formidable competitors beyond the College walls to maintain the vigour of his application.

But it is not to be forgotten, that while on the one hand the public and the student are thus interested in the respectable condition and emoluments of professorships, little apprehension can be entertained that the fees shall be raised too high. That rivalship to which the character of a mere public school exposes the University operates as a perpetual restraint upon individual professors, and upon the Senatus Academicus, in regulating their fees, so that the amount shall at all times be kept in due accordance with the demand of the public.

The Senatus Academicus, on these considerations, earnestly press on the Commissioners the necessity of taking an enlarged view of this subject. They have here been called upon to contend, as it were, in favour of what it is always degrading to be employed in vindicating, pecuniary emolument. But what, in one sense, may be considered as mean and base, in another and more enlarged view stands associated with the dignity of the University—with the public advantage—with the true interests of science—and with the benefit even of the students themselves.

With these observations, and with their most humble but earnest entreaties that the Commissioners may be pleased, without delay, to turn their attention to the due modelling of the constitution of this University, the Senatus Academicus conclude with recommending a deliberate consideration of the subjoined Reports.

University of Edinburgh,
July 24, 1829.

I. REPORT of the Theological Faculty.

Theological Faculty.

1. We consider many of the articles wisely calculated to improve the system of theological study, and feel most sincerely disposed to regard them with that respectful attention to which they are so well

University of Edinburgh.

Report on Provisional Resolutions.

Theological Faculty.

entitled. Indeed, some of the most important of them were, in a great measure, carried into effect last Session.

2. We think no objection can, or ought to be stated, to teaching two hours daily instead of one, as has been the general practice. This must be understood of the five days of the week, which are the days of teaching according to academical practice. It may be left to the professors respectively to meet, or not, on the Saturdays, as they may find it necessary for the accomplishment of their business, and the advantage of the students. There seems to be no advantage in altering the hours already established; and when other hours are to be appointed, it should be left to the professors, that it may be done with due attention to the circumstances of the different Universities. However necessary and advantageous additional hours may be, little good will be done unless some means are devised to secure the attendance of the students.

3. It is respectfully submitted, that the professors should be permitted to employ these hours in the manner they find, from experience, to be most useful in accomplishing their object, and promoting the improvement of their students. We have the fullest evidence, that one hour a-week is altogether inadequate for discourses and examinations; and that both, notwithstanding their supereminent usefulness, would be, in a great measure, sacrificed, if the professors were so restricted.

4. We are disposed to think the existence of a second profession, and a second Professor of Divinity, in our University, very favourable for carrying some of the proposals into effect, though this does not appear to have been considered in drawing them up. Such is Dr. Meiklejohn's class; as appears from the charter by William and Mary; the word *history*, either ecclesiastical or civil, not occurring in the whole document. The teaching historically, or chronologically, has been adopted with a view to the *majus bonum*, and ought to be continued.

5. The occupant of the chair of church history feels more interested in the article which proposes to confine his course to two years, than any other. Against this he very earnestly, but most respectfully remonstrates, because he knows, from experience, that three years,—one for the Old Testament period, and two for the New Testament period,—is the shortest time that can be assigned, if the business is to be usefully accomplished.

6. We consider the proposal of reporting to the First Professor of Divinity very objectionable, on different grounds. It would mark a kind of subordination which was not originally contemplated, and diminish the attention of the students to some of their professors, and respect for them. Besides, it is proper that Presbyteries should know, and from their own statements, the estimate which the different professors have formed of their students. Why should there be any change on the very long established practice of the professors granting their certificates directly to the students?

7. We cannot bring ourselves to think, that the making the Principal a working Professor would either redound to the honour of the University, or the public advantage. The best judges have long been of opinion, that Scotland has too few such offices as the rewards of eminent literary merit. Besides, in the case of our University, there seems to be no great necessity for it. In the Second Divinity, or Church History Class, all the books of Scripture meet with very full and particular attention, at the times they are understood respectively to have been written. This is what may be called biblical literature. The Professor of Hebrew is willing to give, in his additional hour, a course of lectures on biblical criticism.

8. We feel the proposal respecting fees to be a delicate subject, but must ask, whether, if students of divinity are to pay fees, the highest department of knowledge is not degraded, by making them so different from those paid in other branches of study. Neither does this appear to be altogether just, when the labours of the Theological Professors are to be made as great, and even greater than those of the majority of their brethren. But, whatever may be determined on this point, there can be no doubt that the fees paid to the different Theological Professors should be equal, unless the demands made on their time and labour be different.

9. We must be allowed to suggest, that the proposal about conferring degrees in divinity requires farther consideration. Intellectual attainment alone seems to be contemplated, without any regard to worth and respectability of character; which is placing these academical honours on an entirely new footing. Individuals might claim them of right, on going through the appointed examinations. It has been understood, for a number of years, that this highest degree should not be conferred till the name of the individual had stood twenty years on the matriculation roll of the University in which he had commenced his studies; but upon this point, which seems important, there is nothing provided. The calling in a committee of the presbytery of the bounds is objectionable, as seeming to imply some suspicion of professors, and inconsistent with the chartered rights of Universities. Besides, if this committee be not limited with regard to number, the power will be virtually transferred from the University to the presbytery within the bounds of which it is situate. We say nothing of this part of the proposal being likely to become a ground of contention and discord.

10. We conclude with mentioning one circumstance, respecting the system of theological study, which must of necessity be kept in remembrance. The wisest regulations which human wisdom can form, will be of no avail, except in so far as the church acquiesces in them. It has always claimed and exercised the power of determining the attendance to be given, and the course of study to be pursued by students of divinity.

Thomas Chalmers, *S. S. T. P.*
Hu. Meiklejohn, *S. S. Th. et Hist. Eul. Prof. Reg.*
Alex. Brunton, *Prof.*

II. REPORT by the Law Faculty.

Law Faculty.

The Law Faculty have considered with great attention the new arrangements proposed by the Royal Commissioners in the department of jurisprudence; and it appears to them that these arrangements, if carried into effect, would very materially injure the interests of the University, and the advancement of that study in Scotland. They must be permitted to observe, that they are at some loss to perceive, what occasion there can be for disturbing a course of study which has been found in practice to answer all the purposes of legal instruction, and with regard to which they are not aware that complaints have, anywhere, been made. The classes devoted to the different departments of legal study are regularly and fully taught; improvements in the method of treating their subjects have been introduced into all of them;

937

new means of study* have been furnished—new modes of instruction† zealously employed; while an increasing concourse of students marks the sense entertained by the legal community of the present efficiency of this department of University education. It was hardly to be expected, therefore, that any material change in regard to it should be thought necessary, much less that innovations should be proposed of a purely speculative description, and wholly unsuited to the condition of those for whose improvement they are intended.

In proceeding to consider those new regulations as to which the Commissioners have desired the Senatus Academicus to give advice, the Law Faculty would beg attention, in the first place, to the description of persons interested in the department of education under review;—to their means, and demands for instruction;—and to the consequences of overlooking these important circumstances in framing any system for the regulation of legal study.

The law students may be divided into four classes:—

1. Those intended for the bar, and who are either engaged in general study, directing their attention to a liberal and comprehensive course of education, without the laborious apprenticeship of a writer's chamber; or who combine with their general studies the information to be derived from that species of instruction.

2. Those who intend to be writers to the signet, and who are under indenture as apprentices.

3. Those who are in the same way destined and apprenticed to the profession of solicitors in the Supreme Courts.

4. Those who come from the country for instruction, in the immediate view of practice; consisting chiefly of those who, having gone through their apprenticeships in the smaller towns, are desirous to prepare themselves, by a course of law and conveyancing in Edinburgh, to enter on their profession as writers in the country; and partly, but in a much smaller proportion, of those who, having already entered upon their professional career, contrive to take the winter months for such a course, in order to qualify them to cope with better-educated rivals.

It thus appears that a considerable number of the students of law are beyond the age when academical education forms the sole object of attention; and that there are many who, while proceeding with their studies, are occupied in labours which place them (as to time) at the will of others, their employers or masters. This forms a consideration of great importance in regard to the hours of academic study. The mornings from an early hour, especially during the sitting of the Court, are not at the command of such students; the evenings are devoted to hard labour; and the only part of the day which can be given to attendance on classes, is from two o'clock till four.

In respect, again, to the length of the session, it is very necessary to be remembered, that many of the students who come from the country depend for the means of continuing their residence on such employment as they can procure in Edinburgh, which generally lasts only during the sessions of the Court; and, that although there are some who come solely for study, trusting to their own private resources, these are, in most cases, exhausted, in the course of an academical attendance of five months.

Another consideration which ought not to be lost sight of, is the description of persons who are to fill the chairs. If they are to be men eminent in their profession, whose lessons are to be valued by the students, and whose knowledge is to be improved and kept up by practice, it will be necessary, on their account, as well as on that of the students, not to disregard the practicable hours of attendance, or the length of the course. A professor must not be required to lecture at hours when the Court is sitting; nor in the morning or evening—the time devoted to the labours of study or business. Neither ought he to be required to prolong his attendance so much beyond the sessions of the Court, that he must surrender not only all practice in the House of Lords, but that sort of practice, likely every day, to become more important, which is to occupy the circuits of the jury court.

With these preliminary observations, the Faculty beg to advert more particularly to the proposed regulations.

I. CURRICULUM.

'IT is proposed—1st. That there should be a legal curriculum; and 2nd. That it should consist of three sessions.

The word *curriculum* seems here to be used in a loose and colloquial sense, rather than in its correct meaning as a course of study intended as the path to academical honours; for it does not seem to be proposed to institute any degrees in law; nor do the Faculty believe that any good would result from such an institution. The Faculty are, however, somewhat at a loss to decide exactly what interpretation is to be put upon the proposal, since it seems to require imperatively—1st. That the course of study should extend over three sessions; and 2nd. That the Senatus shall give their advice to the Commissioners, whether attendance on a particular class, that of conveyancing, ought to be made compulsory—and, if so, in what year.

If it be the meaning of the Commissioners to *recommend* a course of study, of a certain duration, and in a particular order as fit to be adopted by professional Bodies, it will be proper to direct that advice with a particular view to the body meant to be addressed;—the Faculty of Advocates: the Society of Writers to the Signet; the Society of Solicitors in the Supreme Courts; or the several Bodies of Procurators in the country;—for the same course cannot be equally suited for the whole.

The Faculty would here observe, that it seems more expedient to leave this matter to be determined by those several bodies themselves, according to their own views of the knowledge and proficiency required in each department, and of the practicability of attaining it, under the existing arrangements of the University. In so far as academical policy is concerned, all that seems requisite is, the institution of classes supplying appropriate means of study; and the arranging, in the most convenient way, the relative hours of lecture, and duration of the courses.

II. DUTIES OF THE PROFESSORS.

1. The Faculty observe that it is not proposed to interfere with the *Class of Civil Law*, in respect to the plan of teaching. Formerly, there were two classes; an elementary and a more advanced class—for the Institutes and for the Pandects. The Faculty approve entirely of the change introduced by the

* In the class of the Law of Scotland—1st. A Text-book, containing a minute citation of cases and authorities; and 2ndly. A private Law Library, purchased at great cost by the Professor, and open to the Students morning and evening, for the purpose of consulting and verifying the authorities referred to.

† Examinations, both oral and written, with Prizes of considerable value, given by the Professors, in the classes of Civil Law, and Conveyancing.

present Professor, who has comprised his instructions in civil law within a single course. But the proposal of the Commissioners, that the class shall be taught for two hours daily, appears to the Faculty to be very objectionable, for reasons to be afterwards detailed. In the meanwhile, it may be observed, that in the proposed regulations it is said, That *in the first year* civil law should be taught for two hours, &c. The specification of a particular year is supposed here to have reference to the intended curriculum, and as such, falls under the remarks already made on that subject.

2. It is with respect to the *Law of Scotland* chiefly, or entirely, that the Commissioners have proposed to make any change on the present plan of lecturing; their proposal being, that the Professor shall prepare a course of lectures, the delivery of which shall occupy two years or sessions; that the one half of the course shall be delivered in the first year, the second half in the second year; and that in the second year also, the first half of the course shall at a separate hour be read to another class of students.

The *first* objection that occurs to this plan is, that it is unsuitable and unusual, if not altogether unprecedented; for in every proper course, the student has a complete view of the science laid before him —sometimes more elementary, sometimes more recondite,—but always so conducted, that the subject shall be presented to him as a *whole*, in a systematic form, before he is left to the farther prosecution of his studies in private.

In the *second* place, the plan stands opposed to the insurmountable objection, that it would have the effect of denying to that numerous class of students who come from the country, only for a single session, anxiously looking for professional instruction, and to whom it is very important to afford it, the opportunity of obtaining a systematic view of the law of Scotland, within the period during which they can afford to give their attendance;—a state of things which would, in all probability, lead to extra-academical institutions, with means of instructions more reasonably adjusted to the wants and circumstances of legal students.

The present Professor of Scots Law, was for some time, inclined to adopt a plan which he is satisfied would have been more beneficial than that proposed by the Commissioners; but which he has, on further consideration and inquiry as to its probable effects, abandoned as unsuitable. It proceeded on the principle that there should be two distinct courses of lectures—an elementary course, and a course more advanced, each delivered during the same session; the one containing an explanation of the general principles of our municipal system, civil and criminal, the other, an explanation of all the deeper questions, and more complicated relations which it presents. This plan, into the developement of which it is not now necessary to enter farther, has been relinquished; because, though it avoids one of the evils of a divided course, such as that proposed by the Commissioners, it still implies the necessity of doubling the time of attendance; and would thus be rendered unsuitable to the other avocations and objects of a great proportion of those for whose improvement it was designed.

Another arrangement has occurred to the Faculty, which they beg to submit for consideration,—namely, that the winter course should proceed as at present, but that there should be two supplemental summer courses, to be delivered in alternate years—the one devoted to *criminal law*, the other to *actions*. Of the former, and its importance as a subject of a separate course, it is not necessary to say anything. Of actions, or the doctrine and practice of judicial procedure, the importance has lately become more manifest; and it furnishes a subject of the most useful practical instruction. In his present course, the Professor is occupied nearly a month, on this subject, without in any degree exhausting the matter; and the slightest consideration will satisfy the Commissioners, on the one hand, that to cut it off from the course of Scottish jurisprudence would leave space for a more full illustration of legal doctrines, and on the other, that a most useful course, of two months, might be delivered on a subject connected so immediately with practice.

3. With regard to the *class of conveyancing*, the Faculty consider it as a very important addition to the means of legal study, as directed to practice; and the number of legal students, of all descriptions, who, in point of fact, do attend it, furnish the best, and perhaps the only answer necessary to the question, as to the propriety of including this class in the proposed curriculum of legal study. As to that part of the question which regards the *year*, in which attendance on it should be required, if the Faculty were to give any opinion regarding the course of study fit for a student of law, and which ought to be recommended to the higher juridical bodies for adoption, they would say, that the student should first direct his attention to the *Civil Law*, then to the *Law of Scotland*, and finally to *Conveyancing*. But it is proper to observe, that the whole, almost, of that body of legal students who resort to the University for a single session, attend the classes of Scots Law and Conveyancing at the same time; and that any arrangement which should prevent either this description of students, or those engaged in the revision of their professional studies, from doing so, would be in the last degree unreasonable and prejudicial.

III.—Length of Course, and Hours of Attendance.

It is particularly necessary that the Commissioners should be reminded, that they are called on to consider, not the best *possible*, but the best *practicable* arrangements; and that, if the rules of Universities run counter to the interests and convenience of practical men, it is easy to find substitutes for academical instruction. It may be somewhat mortifying that the interests of science should suffer from such obstructions; but science, and its professors, and its legislators, must submit to instruct the world, as the world chooses to be instructed. If the hours be inconvenient, and students cannot attend, the demand will find a supply elsewhere;—if there be a scanty attendance of students, the best Professors will not be obtained; if the time of the Professor himself be too much encroached upon, those who are fit to instruct the youth of the profession will not engage in so laborious and unprofitable a task.

1. The study of the *Civil Law*, as the least connected with immediate practice, may be considered as the proper foundation of a liberal education in law, and the class of civil law is therefore attended by a description of students more juvenile, and more purely academical, than those who attend the other law classes. But by the subsisting regulations of the writers to the signet, their apprentices form a large proportion of this class; and even of those who are breeding for the bar, many are under engagements very similar to those of writers' apprentices. Even with regard to this professorship, therefore, attention is necessary to the hours at which young men can command their time.

The Faculty are very clearly of opinion, that the proposal to teach this class for two hours each day, ought not to be adopted. It is not only unnecessary for the object of teaching, but it is impracticable, as requiring more time than can be allowed to the student. 1. The Faculty may state their opinion very decidedly, that effectually to engage the attention of a law class for an hour at a time, is as

939
University of Edinburgh.

much as can be accomplished, or should be attempted. Weariness, impatience, habits of inattention, disgust with the study, would be the certain results of attempting more. 2. An attendance of two hours, whether successively or at different times of the day, would, in point of conveniency to the students, be held so objectionable, that it would inevitably (and this the Faculty have the best reason to believe) lead to the repeal of those regulations which are now in observance by the Society of Writers to the Signet, requiring the attendance of their apprentices on the class of civil law. But 3. The Faculty are clearly of opinion, that an additional hour in the day is not necessary, either for lecture or examination. There is ample time in the session for all that is required to be taught in the course; and the examinations, as at present conducted by the Professor, have, in his opinion, proved sufficient for every useful purpose.

For these reasons, the proposed change on the hours of teaching in the civil law class, is thought not only to be unnecessary, but in a high degree injurious.

2. In the classes of *Scots Law* and *Conveyancing*, there is still a greater number of students, whose time is not in their own hands. The present hours and courses have been acquiesced in, and have become part of the settled arrangements of the profession; and any material change would be attended with much difficulty, as well as hazards, against which the powers of the Commissioners cannot guard. Law is not, and could not, with any practical advantage, be converted into a subject of study for academical honours. It is, however, a subject of the deepest interest and importance to the various bodies or corporations of which the legal community consists; and those bodies have both the right and the means of providing for the instruction of their students, without regard to the edicts of universities. They will give a decided preference to the Metropolitan University, as long as its system of instruction is conducted upon principles, and in a way, compatible with the wants and condition of those requiring to be improved by it, and with professional interests; but they will not abide by it, if any system altogether unsuitable to those persons, or subversive of professional interest, should be introduced.

The Faculty, therefore, after considering this matter very carefully, and with due inquiry into the arrangements and views of those who are beyond the authority of the University, or Commissioners, report it as their decided opinion—1. That the hours of lecture, and the length of the session, as at present arranged, ought not to be disturbed; and, 2. That if separate hours be required for examination, one in the week for each class is sufficient.

As to the *Scots Law*, the Professor would earnestly beg a reconsideration of the point of *examination*, with a recollection of these circumstances:—That the pupils are more advanced; that many of them are of an age, and in a situation, in which it is not pleasant to submit to examinations, and not decorous or proper to shun them; that the subject is not peculiarly well fitted for examination, as a test of knowledge; and that there is not time, with due regard to the extensive business of the course, to carry on examinations with any hope of advantage. In the class of *Conveyancing*, it is true, examinations have, during the last three sessions, been regularly practised, and, as the Professor thinks, with great benefit; but it is to be observed first, that his course is necessarily less extensive, and consequently allows more time for examination, than a course directed to the law of Scotland generally; and next, that conveyancing, both in theory and practice, is much better suited than any other department of law, for this mode of instruction. The success of this experiment is not, therefore, to be taken as conclusive evidence of the utility of examinations in the class of Scottish law.

The Faculty cannot conclude this report, without expressing their disappointment that, while the Commissioners have intimated the expediency of material changes in the department of legal study, in regard to classes actually and prosperously taught, they should have been altogether silent as to the future destination of the only class connected with the name of law, wholly lost to the University—namely, the class of *Public Law, and of the Law of Nature and Nations*. Had that class been adverted to, in the proposals of the Commissioners, the Faculty would have had an opportunity of offering some observations which, at present, might be considered as misplaced.

Signed by Order of the Faculty,

MACVEY NAPIER, *Dean*.

III.—REPORT of the MEDICAL and SURGICAL PROFESSORS.

The Professors of Medicine and Surgery, in obeying the directions of the Senatus Academicus in regard to the suggestions that occur to them on the scheme of medical study proposed by the Royal Commissioners, beg leave to remark, that the regulation of studies for the medical profession in this country is a matter of peculiar complication, difficulty, and delicacy, for several reasons, which are not obvious on first consideration of the subject. They may, therefore, easily escape the attention of those who are not practically acquainted with it; but their weight will hardly be denied by those who have considered it in all its relations.

1. It is in the *first* place to be observed, that graduates in medicine are differently situated in this country from members of the other learned professions in this essential respect, that they enjoy no real monopoly of any branch of their profession; but are exposed to the continual, keen, and often successful rivalry of other practitioners, whose education has been less expensive and less complete.

It is also certain, that the public, on whose favour the fortunes of a medical man depend, are necessarily very imperfect judges of medical attainments, and that, in fact, the difference between the most highly-educated physician, and a practitioner of good sense and experience, but of little scientific knowledge, is disregarded even by the most competent judges, in the common routine of practice.

It accordingly happens very frequently, that men who practise on the inferior professional diplomas, whose education has been chiefly by apprenticeship, and who have no pretensions to much literary or scientific knowledge, acquire as much of the confidence of the public in all departments of the profession, and in all ranks of society, as physicians of the highest learning. It is this unavoidable circumstance in the practice of the profession, which must ever present the real obstacle to the beneficial effect of regulations intended to improve the scientific education of any one class of medical practitioners, in a country where no class enjoys any monopoly of practice.

From these undeniable facts it follows, most distinctly, that much caution and practical experience are required to make beneficial to the public any laws for regulating medical education; and that hasty and violent innovations must defeat their own object. Their effect will be, to render the regu-

lations under which a degree in medicine is given a matter of absolute indifference to the public, because by placing this degree beyond the reach of practitioners in general, they will increase the proportion of those who will *content themselves with the inferior education* requisite for inferior diplomas; and thus they will *lower instead of raising the general attainments of practitioners* throughout the country. The Professors entreat that this observation may be kept continually in view during the whole of the subsequent remarks, because it is the foundation upon which most of them are placed. They are the more urgent on this subject, because they are sorry to observe that the opinions which they thought it their duty to submit to the Royal Commissioners, have been in a great measure disregarded; and that the scheme now proposed seems to have been constructed, they have no doubt, with the purest intention of conferring a benefit on the public, but merely on a speculative view of the importance of medical men being well versed in literature and science; without consideration of the practical difficulties of the subject, or of the efficacy or adequacy of the means by which it is proposed to attain that end.

They must be permitted to observe, that to be really effectual for the good of the public, such improvements must be gradual; and their extension must be regulated by the practical observation of their effects. The education required for the medical degree in this University is already much more complete and scientific than that taken by the greater number of practitioners enjoying the confidence of the public.

The Professors are willing to allow that, by the plan of the Royal Commissioners, a certain number of physicians might be formed, having *at the time of graduation* attainments chiefly unprofessional, or at most collateral, superior to the average of those possessed by the candidates at present; but they altogether disbelieve that, though this plan were adopted, a greater number of such physicians would be found in practice *than is to be found in the profession as already constituted;* because there are many men now in the profession, who, from the love of literature, and from the ambition of acquiring scientific eminence, voluntarily carry their studies much beyond what the regulations of this or any other university require, or the scheme of the Royal Commissioners proposes.

The Professors beg leave most earnestly to submit, that it is not the proper object, nor within the reach of legislation in these matters, to raise young men, by a compulsory education, to eminence in the medical profession. Men of real scientific eminence cannot be formed by laws; or, if they can, it must be by such laws as reward their labours, not by such as prescribe their education.

The true object of legislation, as the Professors conceive, in regard to the medical profession, is, not to give a high and varied education to a few physicians, for the honour of that title, but to give the best possible education to the greatest possible number of practitioners, for the benefit of the community. Now for this object, in the case of any degree, the regulation of which is intended to have any practical good effect, two conditions are requisite:—First, That the education given be in itself good; and, Secondly, That it be such as many practitioners will take. If the last condition is not secured, it is to no purpose that the first is fulfilled.

The wisdom of the regulations for the degree of M. D. in this or any other university, should be estimated neither by the amount of acquirements demanded alone, nor by the number of the graduates alone, but by the number of graduates and their acquirements taken conjointly. When the medical school of the University of Edinburgh is tried by this test, the professors know that its usefulness and importance to the profession will be found to be such as should protect it from any rash or speculative innovation.

Further, it appears to the professors to be especially unnecessary to insist on very high scientific attainments, for all physicians: since it is proposed by the Royal Commissioners to grant a higher degree, viz., that of Doctor in Medicine and Philosophy, to such men only as desire to have a character for extensive and varied scientific knowledge. By means of this additional degree, any advantage that may be anticipated from the compulsory education of physicians of this character, may be obtained *without sacrificing the interest of the public*, and violently disturbing the present constitution of the profession.

II. Another principle which ought always to be held in view by those who would regulate medical education for the benefit of the community is, the absolute necessity of that education being in every case strengthened and enlarged by much practical experience before it can enable a medical man to acquire the confidence of the public. Nothing that can be done within the walls of a university, or in an hospital, where the student is only a spectator, can supersede the necessity of every individual practitioner habituating himself, in one way or other, to the minutest details of practice. The scientific education of a physician can only form, therefore, a part of the foundation of the character on which he is to depend for success in life; the rest must in every case be the result of exertions, and generally of gratuitous exertions, in the practice of the profession, which must be continued long after the period of education is over, in whatever manner that education may have been conducted. The immediate object of medical education is to fit the young physician to undertake, and to profit by, these preparatory professional duties; and it should always be so conducted as to leave time and opportunities for these. It is accordingly found by experience that the most learned and scientific physicians are neither the best, nor the most successful practitioners; and that in some of the universities abroad, where a more rigid course of academical instruction, and a more minute knowledge of merely scientific subjects are exacted of the graduates, than is done here, there is certainly no corresponding superiority of their practical skill or usefulness. There is therefore a limit to the beneficial effects of compulsory additions to the studies of those who enter on any of the departments of medicine.

III. Another circumstance in regard to the medical profession, which renders the regulation of the education for it a matter of peculiar complication and delicacy, is, the great variety of situations and circumstances in which valuable medical information may be obtained; the consequent variety of previous information, in those who resort to this, or any other school of medicine; and the advantage which many medical students derive from changing, within certain limits, the place of their studies, and from hearing the doctrines, and witnessing the practice, of different schools. In this University in particular, it has been a common practice, for many years past, for young men to present themselves as candidates for graduation whose practical knowledge has been partly acquired in other medical schools and hospitals, often unconnected with universities. These young men frequently appear on examination to be among the best informed of the graduates; many of the most eminent men in the profession have followed such a plan of study; and the Professors are at a loss to perceive what benefit can result to the public from such men being prevented from taking part of their education and a medical degree

at Edinburgh. The hospital which is connected with this University cannot indeed be made to give, with due regard to the comfort and safety of the patients, to the great number of medical students resorting to this school, all the practical information which they are expected to acquire, and to show on their examinations for degrees; and in the present state of the law regarding anatomical instruction, it is quite impossible to furnish in Edinburgh the means of such instruction in the requisite degree, to all the students of the University. It was on these grounds that, when the term of study required of medical graduates was extended to four years, the Senatus judged it proper to make allowance for hospital attendance, and to leave opportunities for other studies to be prosecuted elsewhere, particularly in London. But in the scheme now proposed for the education of medical graduates, it appears to be determined that their education shall be in universities exclusively; and even that it shall be conducted in a way which will confine it strictly to the Universities of Scotland. It leaves the students neither time nor money for those auxiliary opportunities of improvement, and obliges all candidates for Scotch medical degrees to forego all the advantages which a residence in London, Dublin, or Paris, undoubtedly offers, particularly to those destined to practise in England or Ireland.

The Professors think they have reason to express their surprise and regret, that after all the exertions that have been made, to give such celebrity to the medical school and medical degree of Edinburgh, as has induced a great and increasing number of the most respectable members of the profession, altogether unconnected with Scotland, to resort to this university, it should now be proposed to lay down such regulations, as must virtually exclude all such candidates for the Edinburgh degree; and go far to confine the usefulness of the medical department of the University of Edinburgh to a portion, and but a very small portion, of the medical profession in Scotland itself.

Such a complete change of system, affecting not merely the interests of this university, but the general education of practitioners throughout this country, as the regulations of the Royal Commissioners, if carried into effect, would produce, might no doubt be advisable in regard to a school of medicine, which had notoriously misconducted itself; which had resisted all suggestions for its improvement; and disappointed the just expectations of the public; but the professors confidently state, that this is the very reverse of the fact in regard to the Medical School in the University of Edinburgh. This school has enjoyed very great reputation for nearly a century; the Edinburgh degree of M.D. has, in all parts of the world, been held in high estimation; and its graduates are as much distinguished for professional skill, not only over the British dominions, but in many foreign states, as those of any other university whatsoever. The Professors farther beg the Senatus to observe, that the number of students resorting to it, and the number of candidates for its degree that annually present themselves, and particularly the respectability and standing in the profession, of many of these candidates, afford ample evidence that the confidence which the public repose in it is unshaken.

The Professors beg farther to remind the Senatus, that so far from resisting practicable improvements, they have, themselves, shown their anxious wish to improve the education of physicians, so far as can be done with practical good effect, by an extension of the amount of medical study requisite for their degree, such as had not before been contemplated in any other British university, and *which has not yet been imitated*, either at Oxford, Cambridge, or Dublin; they have not yet had an opportunity of observing sufficiently the practical effect of these alterations, or of judging how much farther such improvements may be carried, in the cautious manner which, for the reasons above stated, they hold to be essential to their beneficial effect. They know they can assert, in accordance with the conviction of every one conversant with the habits of the students, that these are made to labour harder now than at any previous period in the history of the university. In such circumstances the Professors cannot but consider it as particularly hard, and even unjust, that they should have such extensive and untried alterations imposed on them, as can have no other effect, according to the best of their judgment, than to defeat the purpose which they have been thus endeavouring to promote,—the improvement of the general usefulness of those to whom the health of the community is to be intrusted.

The Professors trust that the Senatus will not suppose, from what has now been stated, that they are not impressed, as they ought to be, with the importance of that scientific instruction which it is their duty to communicate. The Senatus must perceive, that those who are intrusted with the care of medical education, whatever be their own attachment to purely scientific pursuits, have a higher duty to perform than to raise the merely scientific value of the academical degree. A medical degree is best honoured in the extensive usefulness of its possessors. To that usefulness a certain amount of scientific knowledge is essentially important; and just in proportion as it is important, it is desirable that such knowledge should be generally diffused: precisely because they are anxious that many practitioners should be men of science, the Professors deprecate such changes as would estrange physicians from practice.

The Professors are quite aware likewise, that in stating these considerations they labour under the disadvantage of arguing in protection of their own interests; and may be supposed to be biassed by selfish motives. They most freely admit, that this is a reason why their arguments should be carefully weighed; but it is not a reason why they should be hastily rejected. If it can be shown that any definite and tangible advantage to the public must necessarily result from the degree of physician being placed beyond the reach of many professional men, who now for its sake submit to a fuller course of study and stricter examinations, than they would otherwise undergo, let this be done; but if no such advantage can be clearly demonstrated,—still more, if, as the Professors believe, the public must be sufferers by the change,—it will surely be no recommendation to such measures, that they will necessarily injure the fortunes of men who have devoted their lives, they will say faithfully and zealously, to the acquisition and communication of knowledge, and that they will lower the character, and lessen the usefulness, of an ancient seat of learning which has sent forth, during the last century, a greater number of able and useful medical practitioners, than any other school of medicine in these dominions.

The Senatus are aware that the medical professors, (holding it to be their duty to elevate the education of the physicians who take their degree, as high as the practical demands of the public will justify) have already had in contemplation some farther additions to the course of study for the medical degree. They, however, are of opinion that further improvement of the value and usefulness of the Edinburgh professional degree is to be expected from increased hospital attendance and improvements in the mode of examinations, rather than from additional compulsory attendance on lectures. The scheme proposed by the Royal Commissioners proceeds upon the very opposite principle, and disregarding altogether practical improvement, requires only a very great increase of the duration and variety of *compulsory university education.*

The whole course which it is proposed to make imperative on candidates for graduation, extends to thirty-nine months of constant study; with three vacations of one month each, at intervals of eleven

University of Edinburgh.

Report on Provisional Resolutions.

Medical Faculty.

months. During the whole of these thirty-nine months, the average amount of compulsory attendance in the university and hospital, to be required of the students, is not less than six hours daily.*

Besides going through this course of study, each candidate for graduation is to be required to present a Latin thesis of his own composition; and to submit himself to examination, not only on all the subjects of this course of study, but likewise on Latin, Greek, French, Mathematics, and Natural Philosophy.

That the amount of this burden may be duly appreciated, it is necessary to bear in mind,—First, That in order that a student may derive full benefit from academical lectures, it is necessary that he should employ several hours a day in reading on the subjects of these lectures. Secondly, That a considerable proportion of the students of this university are the apprentices of surgeons, and are obliged to devote several hours a day (often with great advantage to themselves) to the service of their masters. Thirdly, That many are very usefully employed in the latter years of their studies, as clerks and assistants in the infirmary, in which duty they are necessarily engaged several hours a day. Fourthly, That many advanced students are employed likewise very usefully, particularly in the summer season, as clerks and assistants in dispensaries. Fifthly, That almost all the medical students at this University have been for many years in the habit of attending lectures, often of great value and importance to them, without the walls of the university; and Lastly, That many of them are regular attendants on professional societies, established with great effect for their mutual improvement. For all these important extra-academical auxiliaries to the study of medicine, as it has been hitherto conducted in Edinburgh, it appears to be the intention of the Royal Commissioners, not only that no allowance shall be made, but that no time shall be left.

In some of the despotic countries on the Continent, particularly in Austria, a system of compulsory academical attendance, of an extent approaching to what is here proposed, is in force; but the physicians who are trained under such a system, have not proved themselves more useful members of the profession, than the graduates of this university have done; and a monopoly of practice, which is unknown in this country, is afterwards secured to them by law.

The introduction of a system of so extensive and varied compulsory study, for the degree of physician, into this country, and of the discipline by which it is intended to be enforced, the Professors cannot but consider as an innovation quite uncalled for by the state of the profession, and foreign to the spirit of those institutions in which the study of medicine is most successfully conducted.

The great body of medical students in this university have arrived at years of discretion; all of them are perfectly aware that the business in which they are engaged, is to be the foundation of their character and fortune in future life. To such students, the observation of Adam Smith (perhaps too generally stated by that author) is truly applicable:—"Force and restraint may no doubt be in some degree requisite in order to oblige children, or very young boys, to attend to those parts of education, which it is thought necessary for them to acquire during that early period of life; but after twelve or thirteen years of age, provided the master does his duty, force or restraint can scarcely ever be necessary to carry on any part of education." Besides this, the examinations to which the students look forward, are found to be so effectual a check upon idleness and irregularity, that the pupils of this university are as correct in their conduct as in any other institution, and much more so than in some universities where formal discipline is much more strict. The great use of academical lectures to such men is to guide private study, to enforce principles, explain difficulties, and excite interest; but all these advantages are lost from want of time, under an extensive system of varied impositions and positive regulations. Between the professors and students under the present system the utmost harmony subsists, which contributes greatly to the efficiency of the school; but the Professors cannot look forward to the permanency of this mutual good feeling, if they are to be made the instruments of enforcing a system of discipline, and a number of petty exactions, to which the medical students are quite unaccustomed, and which they will undoubtedly regard as an arbitrary encroachment on their time, and an irksome restraint on their usual occupations and private studies.

On these grounds the Professors object to the long and rigid course of university studies, the compulsory examinations, the calling of lists in the class-rooms, and the compulsory regulation of the order in which the different courses of lectures are to be attended.

The medical and surgical Professors will now lay before the Senatus in detail, their observations on the different proposals of the Royal Commission.

I. *Preliminary Examination.*—In reference to the proposed preliminary examination, the Professors beg to express their firm opinion, that as the necessary extent and variety of *professional* study is so great, and as it is the paramount duty of the Senate from time to time to increase this upon the principles already stated, which alone are safe, and which therefore can alone be efficient, attention to other branches, with the exception of the Latin language, ought not to be imperatively demanded from all the candidates, whose previous circumstances and future views are very various. The circumstances of many render the acquisition of such branches difficult or impossible, yet without them they exercise their profession with much advantage to the public.

The education of a doctor of medicine of this university is much more scientific than that of most gentlemen in ordinary life, and the collateral branches required are quite adequate to his purpose in the exercise of his profession. Some men may take a more general education with advantage, but to demand it of all the candidates, would be to require of the majority a sacrifice of some of their more strictly professional studies.

Of the propriety of Latin forming, as heretofore, a part of this preliminary examination, the Professors have no doubt; as it is yet, though less than formerly, a medium of international scientific communication.

Such is the opinion of the medical and surgical Professors; but if a preliminary examination should be insisted upon, it should embrace the living rather than the dead languages, and be confined to certain prescribed elementary treatises on general science. They think that the examiners in every case should be, as hitherto, the Professors of those branches of medicine or surgery which the statutes render imperative; and they are not aware of any source from which the remuneration of these examiners can proceed, except the fees paid by the candidates.

II. *Compulsory Order of Medical Studies.*—This subject, as the Senatus will remember, has been

* In making this calculation, it is reckoned that a Student attending practical anatomy will generally spend three hours a-day in the dissecting room, and that one attending the hospital and clinical lectures will generally spend at least two hours a-day in the infirmary, including the time of following the visits, of witnessing operations and dissections, and of examining and making extracts from the Journals.

943

repeatedly discussed by the medical Professors and their colleagues. The Professors have seen so many medical men extremely well educated by very various courses of study, that they could not point out one, as in all cases, decidedly preferable to others. Besides, the great variety of intellectual character of different students, and the still greater variety of their previous preparation, would make an uniform plan of study exceedingly burdensome and oppressive, and truly injudicious, in regard to many of them.

The Professors are strongly impressed with the belief that, in these matters, all restrictive legislation is injurious, and contrary to the enlightened spirit of the age. They are themselves willing, and many other medical men, with whom the students are connected, are both willing and able, to advise each student individually, according to his circumstances, as to the order of his studies; but the Professors can anticipate no good effect whatever from any more definite general regulation than that which has been already laid down by the Senatus, viz. that at least two six months' courses of lectures, or one of six months, and two of three months (of those requisite for graduation) should be attended in this or some other university, during each season, which is reckoned as an academical Annus Medicus.

Though the Professors are most decided in their opinion against any compulsory order of study, yet they think some benefit may arise from a general recommendation, which students may advantageously adopt, unless there be something special in their case. The Professors think that students should be recommended to acquire, in the first place, a knowledge of the preliminary and what may be called independent branches, as Anatomy, Chemistry, Botany; that they should then proceed to those theoretical and scientific branches of professional study, which require previous knowledge of the preliminary branches already mentioned, as the Institutes of Medicine and Materia Medica, and that their attention should be finally directed to those branches which are strictly practical, as the Practice of Medicine, Surgery, Midwifery, &c.; while Clinical Instruction should be constantly kept in view from the time that the student is sufficiently advanced in his studies to profit by it.

III. *Extension of the Summer Courses to Five Months.*—To this the Professors decidedly object, as one of the regulations which would prove extremely burdensome and oppressive to many deserving students; and therefore, for the reasons above stated, ineffectual for any practical beneficial purpose.

The Professors believe, that in no other university, certainly in none in the British dominions, is such an amount of continued exertion, as eleven months of unremitting study in the year, made imperative on the students. In many instances they know that such exertion would seriously injure their health: and in no case do they conceive that it would be conducive to their real improvement.

Nor do the Professors conceive that it is wise to impose such long continued and burdensome duties on certain of the teachers, as would leave no time for voluntary studies or scientific exertions, and would make the office of Professor one to which men of good prospects in the profession would cease to aspire.

The circumstance of there being no summer courses of such length in any other university, English or French, where medicine is taught, is of itself a serious objection to this part of the plan of the Royal Commissioners. It would compel the students to study in Scotch universities exclusively the branches taught during the summer session; whereas it has hitherto been the liberal policy of this university, not to require any particular course of those Lectures requisite for graduation to be attended in Edinburgh, but leave open a free competition with other universities.

The Professors beg farther to observe on this head, that they are not aware of any reason for such an extension of the present summer courses as is proposed, and in particular, they are at a loss to understand for what reason it is proposed to require, that the class of botany, hitherto taught one hour a day for three months, should be taught two hours a day for five months, when no extension is required of the lectures on such subjects as anatomy and the practice of physic.

Those Professors who lecture in summer, do not object to an extension of their courses to four months; but if this were determined on, they would consider it absolutely necessary that the winter lectures should begin in October, in order that the summer courses should not be prolonged into August. To this proposal, however, there are very serious objections, particularly as some of the medical classes are attended by students in arts, law, and divinity; and it would be extremely inconvenient for most of those, particularly the law students, to attend the university, as early as October; nor is the prolongation of the classes taught in summer, a sufficient object to justify a derangement of the whole system of the university.

IV. *Compulsory Attendance for Three Summers in Scotch Universities.*—This, although not directly required in the scheme of the Royal Commissioners, is rendered indispensable, by the demand of attendance on lectures in three different summers, of such length, and under such regulations, as are not to be found in any other university.

The Professors believe that many students may derive great advantage from remaining more than one summer in Edinburgh; but to the proposal of making such attendance imperative on all during three successive summers, exclusive of the one in which they are to graduate, the objections already stated to a single five months' summer course, obviously apply with triple force. Many of the most meritorious students cannot afford such long-continued residence. Many are very usefully employed during the summer months in attending hospitals or dispensaries, or assisting private practitioners at home. To all, the period of vacation is extremely useful, as then only they have leisure for reading books, and pursuing various branches of study, which are recommended in the lectures. To the health of others, a period of vacation is really necessary. Lastly, In the judgment of the Professors, this part of the plan is objectionable, because several of the classes required to be attended, in these additional summer courses, are not such as it is necessary, or even expedient, to make imperative.

V. *Compulsory Attendance for Four Years in Universities exclusively.*—It is in this part of their scheme especially that the Royal Commissioners appear to have overlooked the essential peculiarity of medical education already noticed, viz., the variety of situations in which useful and important medical knowledge may be acquired. Wherever there is a large hospital, there are opportunities of acquiring essential medical information; and it appears to the Professors extremely unwise in a university which aspires to extensive usefulness, and to a character of liberality, to make no sort of allowance for studies there prosecuted. This applies particularly to the practical knowledge acquired in the different hospitals in London, at which, in fact, the graduates of the English universities are in a great measure educated. Unless there be adopted some such means as the present statutes direct, of at least partially recognising the great hospitals of the metropolis, it appears to the Professors quite certain that the university will lose many graduates who would have done it great credit, without acquiring any compensation in improvement of the value of the degree.

Many of the best-informed men in the profession in England adopt at present the following course of study:—After an apprenticeship in the country, they spend two or three winters at one of the hospitals in London, and many of them take the London Surgical Diploma. Afterwards they spend three winters in university attendance, either wholly at Edinburgh, or partly here and partly in Paris, and then graduate here. The Professors can anticipate nothing but injury to the university and to the public from the loss of such men as graduates; because they are firmly convinced that many of the gentlemen so educated are as well fitted for the exercise of their profession as it is possible to make men, by any course of education whatever, independent of actual practice. But it were in vain to expect that such men, after having taken in London a diploma which enables them to practise every branch of the profession with success, will submit, for the sake of the additional honour of the degree of M.D., to nearly four complete years of incessant labour in Universities.

VI. *Compulsory Attendance on Nine Additional Courses of Study connected with Medicine.*—The sudden imposition of so great an additional burden as this, in the case of a university which sends forth so large a number of graduates annually, and already requires a longer period, and greater amount of medical study, than any other medical school in these dominions, the Professors cannot but regard as a very hazardous experiment, not only with reference to the university itself, but to the state of the profession throughout the country; and they think, for the general reasons already stated, that it will certainly lower, not raise, the general attainments of medical practitioners.

These general objections, however, do not apply to all the proposals under this head. The Professors approve highly of the institution of a separate class of surgery to be imperative on all graduates; but at the same time they think this will entitle the present Professor of Anatomy and Surgery to prefer a claim for indemnification on account of what he may judge to be the diminished importance and value of his lectures, if they shall be confined to the former science.

As might naturally be expected, there is some difference of opinion among the Professors in regard to the expediency of some of the other additions to the course of study proposed by the Royal Commissioners; but, with the exception of Mr. Russell, *who entertains doubts on the subject*, the Professors are clearly of opinion that it would be highly inexpedient to adopt the whole extension proposed by the Royal Commissioners. The opinion of the majority of the medical and surgical Professors is, that considering the great additions lately made to the course of medical study for the degree (the effects of which change have not yet been fairly ascertained), it will be most advisable to impose no additional compulsory attendance at present, excepting the attendance on the separate class of surgery; but as soon as the effects of the recent changes shall have been ascertained, they will take into serious consideration the addition of some of the other classes, which have been proposed by the Royal Commissioners.

The Professors would have been inclined to recommend the addition of Practical Anatomy to the Curriculum, both on the present occasion and on the last revision of the statutes, if a sufficient supply of subjects for this purpose could have been legally obtained; but in the present circumstances they think that the classes of Medical Jurisprudence and Police, and of Clinical Surgery, are the additional branches of study proposed to be rendered imperative on the graduate, which should next be held in view. They can, however, by no means concur in the propriety of making the Medical Jurisprudence and Police a winter course of six months. If the summer courses are prolonged to four months, or even without this alteration, they think that the Professor of Legal Medicine will have time for treating the whole of the Medical Jurisprudence, and the essential parts of the Medical Police, at sufficient length, and in proportion to the time occupied in the other medical courses in the university. In regard to the Clinical Surgery, it appears quite necessary, that if this class shall at any time become imperative, some permanent arrangement should be made with the managers of the Royal Infirmary, to secure that this Professor shall always have the means of giving clinical instruction on cases of patients there treated; and it is also to be observed, that as many candidates for graduation have already surgical diplomas from the College of Surgeons in London and Dublin, it appears unreasonable to demand of these gentlemen, whose surgical education is already complete, attendance on this course, which is not given in connexion with a university in either of those cities, and the attendance on which would be of no avail in qualifying for the surgical diplomas there given.

The addition of a course of lectures on Natural History to the Medical Curriculum, was fully considered at the time when the additions were lately made to that course; and the medical and surgical Professors have seen no reason to alter the opinion they then expressed,—that so extensive and multifarious a study ought not to be made imperative on all medical graduates, nor should they be subjected to examination on all parts of this science. Those parts of it which are most connected with medicine are already taught in the classes of Chemistry, Botany, and Materia Medica; and in regard to the whole study, the Professors still think, that the best footing on which it can be placed, is that which the last edition of the statutes has directed, viz., that it should be one of those university courses which are recommended to medical graduates, and of which a certain number are required to be taken, but no one of which is specified as indispensable. Some of these are much more useful to one individual, and others to another, and the selection of those to be attended is therefore, as the Professors think, properly left to each candidate.

In regard to the class of Military Surgery, the Professors cannot avoid expressing their surprise, that it should be proposed to require attendance on this course of every physician intended for civil life. The class of Military Surgery does not exist in any other British School of Medicine, in consequence of which circumstance, attendance on it has not been required even of medical officers of the Army or Navy; and the professor of it, with a candour and forbearance which have been duly appreciated by all his colleagues in the Senatus, declined to urge, at the time of the alteration of the statutes, that it should be made imperative on the graduates.

It also does not appear to the Professors necessary to make attendance on Practical Chemistry and Pharmacy imperative on all the graduates.

Still stronger objections apply to the proposal of making Clinical Midwifery imperative on all graduates. By this the Professors presume, that the Royal Commissioners mean attendance at the deliveries which take place at the lying-in hospital, and on such instructions as may be given by the professor on the individual cases occurring in that institution. The Professors do not think that such attendance for such a time is expected by the public of physicians in general, or that it will be of use to physicians in the ordinary exercise of their profession. On this account, they cannot expect that much attention will be paid by the greater number of the graduates to this instruction; and it is plain, that without zeal on the part of the student, this kind of attendance must be of little use. Those physicians who propose to practise this branch of the profession, have abundant opportunities, both of acquiring practical

945

knowledge under experienced instructors, and also of making this proficiency known to the public. But if it were possible to imagine that practical acquaintance with Midwifery ought to be absolutely demanded of all candidates, the Professors think that it would be quite necessary to allow them to acquire it under certain regulations from various institutions, because it is absolutely impossible to accommodate at the lying-in hospital here a sufficient number of patients for the purpose; nor indeed is there any adequate institution connected with any British university.

The proposal to institute a Professorship of Pathology separately from the class of Theory of Medicine, the Professors cannot but suppose to have originated in misapprehension of the nature of great part of the medical instruction given in the university, or misunderstanding of the nature of the instruction which would necessarily be given in separate lectures on Pathology, were such delivered. The changes which are effected by diseases on the different organs of the body, their causes and effects, are demonstrated and explained in the class of Anatomy; and the doctrines of Pathology, besides being delivered in a general way in the class of Theory of Medicine, form in fact the basis of the lectures in the classes of Practice of Medicine and of Surgery, and in many of those in the class of Midwifery; and are besides continually explained and illustrated in the Clinical lectures on Medicine and Surgery, and in the dissections at the hospital. The addition of this course appears to the Professors, therefore, to be both an unnecessary and inexpedient increase of the burdens of the students intending to graduate; and they are confirmed in this opinion by observing, that in the schools of medicine in France, which have been lately re-modelled, and where the subjects of medical lectures are in various instances more minutely subdivided than in this country, there is no separate class of Pathology, the *Pathologie Interne* corresponding *exactly* to the class of Practice of Physic; and the *Pathologie Externe* to the Practice of Surgery.

VII. *Compulsory Repetition of Attendance on Four Courses of Lectures at Stated Periods of the Curriculum.*—The Senatus will remember that a proposal to compel repeated attendance on three of the classes in the Medical Curriculum was formerly under their consideration, and was approved of by several of the medical Professors, but was abandoned, because it was coupled with a proposal for a recognition of private lectures, to which many members of the Senatus objected. The intention of the Royal Commissioners differs from that which was then discussed in these points:—1. In the proposal formerly made, it was left optional for the student to attend these additional courses, *either in a university, or out of it*, under certain restrictions as to the private lecturers whose certificates would be received; whereas the intention of the Royal Commissioners is, that all the classes thus required are to be taken twice *in a university*, with the exception of Chemistry. 2. In the former plan, the choice of the classes to be attended twice was left to the students; but in that of the Royal Commissioners the classes of Anatomy, Chemistry, Practice of Medicine, and Clinical Medicine are selected for this purpose. 3. In the former plan, the student was left at liberty to attend these additional courses when he pleased; but in the present, each has its fixed place in the Curriculum.

In all these respects, the Professors must take the liberty of saying, that they consider the plan formerly in contemplation preferable to that of the Royal Commissioners. The Professors think that the students may be safely left, and ought to be left to judge for themselves which of the courses of lectures it is most for their own interest to attend twice; and considering the great variety of opportunities of education and improvement which different students enjoy, independent of their studies in this university, they conceive that a regulation requiring all to follow one course in this respect, would be very injudicious. The time at which the repetition of any course will be most advisable, must also depend on what the student may himself feel as his greatest deficiency at any period of the course, and is not, as the Professors conceive, a fit subject for compulsory regulation.

VIII. *Compulsory Examinations in the several Classes.*—The Professors are quite willing to undertake the duty of examining their classes, but they would strongly object to the proposal of making attendance on these examinations imperative on all who attend the classes for the first time, for two reasons:—First, The number attending several of the classes is generally so great, that if all were to attend the examinations, it would be impossible for the Professors to examine any one student many times during the session. Secondly, The age and circumstances of the students of medicine in this university are so different, that it would be injudicious to apply the same rule to all of them. Some are at the age of fifteen or sixteen commencing their medical studies; others have passed the meridian of life, and have already been engaged in practice, although students of the different university classes for the first time. Any public class examination would be intolerable to students of the last description, and especially such an examination as would be suitable to those of the first.

The more advanced students should, at all events, be exempted from these examinations; but the Professors would consider it much more consonant to the usual, and as they conceive, judicious practice of the university, to make this attendance imperative on none, and trust to the inducement to submit to such examinations which will be given by certificates of attendance upon them, and to the conviction which every student must feel, that those whose assiduity and success in their studies have not been made known to the Professor by this means, must expect to be subjected to a more strict trial than might otherwise have been thought necessary, at the time of their examination for the degree.

IX. *Catalogues to be called in the Class Rooms, and Certificates to be granted.*—The Professors concur in the propriety of ascertaining, in some manner, the regularity of attendance of those who may desire to have certificates; but, for the reasons formerly stated, they object to a burden being imposed on all students, for the sake of a benefit to be derived from it by some. They think that the practice of calling the catalogue daily, would occasion, in crowded classes, a very great loss of time, and lead to many irregularities. They have repeatedly taken this matter into consideration, and conceive that some better plan of obtaining the object may be devised; but until they have had some experience of several they cannot report finally on any.

The Professors approve of certificates being granted to such students as may submit themselves to examination in the several classes; but as they disapprove of such examinations being imperative, they of course do not consider it necessary that every student should claim these certificates; and as it must be exceedingly difficult, where the number is great, to ascertain by examination the proficiency of all the students whom they may examine, they do not think that the certificate as to these examinations should necessarily state more than the fact of attendance.

X. *Proposed Change of Hours of the different Medical Lectures.*—The hours at which the different medical lectures are delivered have been arranged by those who are most interested in their being made

University of Edinburgh.

Report on Provisional Resolutions.

Medical Faculty.

convenient to the great body of the students, and the professors cannot perceive any advantage from their being regulated in any other way. They are at a loss to discover a reason for any one of the proposed changes, and several of them appear to them highly injudicious. It has generally been a maxim, that no two compulsory medical classes should be taught at the same hour; but in the scheme of the Royal Commissioners, Anatomy and the Practice of Medicine are both to be taught at 9 A.M. This would cause little inconvenience if all the medical students in the university were to follow the prescribed Curriculum, and were to take the degree of M.D.; but even according to the existing regulations, the number aspiring to the degree is hardly more than one-third of the whole number of medical students; and if the regulations of the Royal Commissioners were established, this proportion would be very much diminished. Those students who attend only for a year or two (and of such the number is very great) should, at all events, be allowed to study at the same time such branches as they may think most useful to them; and by many such students, the classes of Anatomy and Practice of Physic, are attended in the same winter. Besides, the hour of 9 A.M. is quite unsuitable for teaching Anatomy, because for many anatomical demonstrations, the best possible light is required, and the dissections for these must immediately precede the lecture. If the lecture were to be at that hour, none of the more minute parts could even be satisfactorily demonstrated, far less could they be previously prepared, and the students would be deprived of the advantage which they now enjoy of witnessing the dissection and preparation for lecture.

Similar objections might be stated to several others of the proposed changes of hours, particularly in reference to the classes of Chemistry, Botany, and Natural History, which are attended by many gentlemen who are not students of medicine, who are occupied at the hours assigned to these classes by the Royal Commissioners in other avocations, or in compulsory attendance on other branches of study connected with their own professions. The proposed changes would, therefore, often be extremely inconvenient to these, or amount to an absolute prohibition of their attendance.

Having thus expressed their opinion in regard to all the material changes which the plan of the Royal Commissioners would introduce, the Professors of Medicine and Surgery trust the Senatus will be of opinion, that it is no factious spirit of opposition to all innovation, which has led them to disapprove of so many parts of that plan; but that their objections have proceeded from a thorough conviction, that the result of most of the proposed changes on the reputation of the university, and on the respectability and usefulness of the medical profession, would be the reverse of that which, the Professors cannot doubt, the Royal Commissioners intended.

(Signed by authority of the Medical and Surgical Professors),
WILLIAM PULTENEY ALISON, *Dean.*

APPENDIX TO THE REPORT OF THE MEDICAL FACULTY.

Appendix to Report of Medical Faculty.

No. I.—Dissent from some part of the REPORT of the MEDICAL and SURGICAL PROFESSORS, by the undersigned Professors.

WE the undersigned differ in so far from the opinion expressed in Art. 6th of the preceding report, as to think that a three months' course of legal medicine and a similar course of clinical surgery (with the qualification as to this last formerly proposed), though immediately added to those imperative on graduates, would not bear too heavily either on their time or their funds, and would not estrange their attention from the proper objects of professional pursuit; but on the contrary, by ensuring their attention to some of the minuter details of practical knowledge, would furnish an additional security to the public for their fitness for the exercise of the profession.

We also think that a three months' course of practical chemistry and pharmacy, to be given under the superintendence of the professor of chemistry or of materia medica, would be a proper addition to the list of optional classes, which will then consist of four classes, of which two may be required.

(Signed) ANDREW DUNCAN.
ROBERT GRAHAM.
WILLIAM PULTENEY ALISON.
ROBERT CHRISTISON.

No. II.—Dissent from some part of the REPORT of the MEDICAL and SURGICAL PROFESSORS, by JAMES RUSSELL, Professor of Clinical Surgery.

As I have the misfortune not to concur with the whole of the intended communication to the Royal Commissioners, I beg leave, with all due respect for the opinion of my colleagues, to state my own views of the subject simply and concisely.

I approve of the general spirit which pervades the medical curriculum submitted to the consideration of the Professors by the Royal Commissioners.

In particular I approve of their intention of raising the value of a medical degree, by requiring higher qualifications in the graduates, which unquestionably is the most certain means of breeding intelligent judicious practitioners, and of securing them the confidence of the public. For although experience be indispensable towards the formation of an intelligent practitioner, yet the same degree of experience will become more or less instructive, according to the state of mind of the person who enjoys this opportunity of improving himself. A person with his mind well stored with useful information, well tutored by previous discipline to observe accurately and to reason logically, who has been accustomed to take a comprehensive view of every object, and to bring all his collateral knowledge to bear upon one point, will make much more rapid and much more solid advancement in practical skill, than a person of equal natural abilities who has not enjoyed the same advantages of a liberal preliminary education. It is a great mistake to consider attention to science to be inconsistent with professional pursuits or incompatible with extensive professional employment. The late Sir Samuel Romilly, who was at the head of the English Bar, and a great political leader in the House of Commons, read almost every book of merit which was published in his time. And at present Mr. Henry Brougham not only finds leisure to read, but even to compose scientific essays, under an overwhelming pressure of business. In my younger days too, Dr. Cullen, Dr. John Gregory, Dr. Monro, and Dr. Black, who were then the leading physicians in Edinburgh, cultivated branches of science and literature beyond the mere limits of their profession.

947

Then as to the confidence which the public reposes in well-educated practitioners, every person of observation must have perceived the marked respect paid to practitioners who possess knowledge beyond the limits of their profession. They are regarded as superior in the powers of their minds to their less instructive brethren, and therefore more likely to make good practitioners. They are universally respected. Respect begets confidence: and the four physicians whom I before named as men of a liberal and scientific turn of mind, enjoyed the complete confidence of their fellow-citizens, as practical physicians.

When I contemplate the state of this country, so completely overstocked with medical practitioners in every quarter, I do not apprehend the smallest risk of the public suffering from a want of well-informed physicians to answer every useful purpose. A physician should, in my opinion, possess every academical accomplishment which can add dignity to his character, and thereby entitle him to the respect and confidence of the public. There is abundance of wealth in this prosperous nation to give the most liberal education to as great a number of graduates as the employment of the country can maintain in a respectable situation. And the character of a physician would rank higher in public estimation, if every one was distinguished by his superior education and knowledge.

The Commissioners will, I hope, excuse me for noticing certain regulations which, in my opinion, admit of improvement. For instance, with regard to clinical surgery, an imperative class, the Commissioners enjoin attendance upon botany and upon clinical surgery during the Summer of the second year, without adverting to the incompatibility of attending two classes which meet at the same hour. Clinical surgery during the summer session meets from three to four o'clock: Botany is to meet from two to four. There does not indeed seem to be any good reason for the Commissioners giving themselves trouble about arranging the hours of attendance upon the different classes. The most judicious arrangement is that which best suits the convenience of all the Professors. It is entirely a matter of experience, and will be attained with most certainty by the operation of time, aided by a disposition on the part of the Professors to accommodate one another. Last Winter the hour of clinical surgery was changed to accommodate Dr. Graham. And if there were occasion, other changes would doubtless be made for the mutual accommodation of the parties. So that the arrangement of hours for teaching the different classes, may safely be trusted to the Professors themselves, who are the best judges of the matter, and must necessarily consult each other's convenience.

I very much question the expediency of calling a list, or using any other means to ascertain the presence of every student, as the students of medicine are in general disposed to attend with great punctuality, so that the time lost would not be compensated by any equivalent advantage, more especially as the improvement of the industrious would be sacrificed to the correction of the idle, who are not numerous, and do not deserve so much attention.

I am perfectly willing to try the success of regular examinations. While I am not aware of the practicability of making compulsory examinations applicable to medical students of every description.

I am happy to find that the Commissioners recommend establishing classes of practical anatomy and of practical chemistry, as I esteem attendance upon both of those classes to be essential towards completing the education of every practitioner in medicine. The constitution of those classes, however, and the regulations about certificates of attendance, are points which require mature deliberation. I do not propose to subject the Professors of Anatomy and of Chemistry to the drudgery of conducting the practical courses in person. The conduct of a dissecting room is a laborious servile occupation, not altogether consistent with the dignity of a professor, whose time would be more profitably employed in studying the discoveries and improvements connected with his profession; more especially as this branch of instruction is perfectly well taught by prosectors, who have applied themselves particularly to the study of practical anatomy, and who would be willing to devote sufficient time, perhaps five hours a-day, to discharge their duty.

I do not perceive any just grounds for making a distinction between the nature of attendance required in a course of practical anatomy and in a course of practical chemistry, or why an extra-academical course of practical chemistry should be received, while an extra-academical course of practical anatomy should not. I should regard it as a great improvement to extend the privilege to both courses alike, as the students would then have ample opportunity of being fundamentally instructed in those important branches of their profession. An abundant supply of well-qualified private lecturers would always be found, provided the University made those classes imperative, as the College of Surgeons has done, which would secure a numerous attendance. And the University might employ various precautions to prevent unsatisfactory courses from being received, besides requiring specific certificates of the student's proficiency.

The lecturer in the University, though not elevated to the rank of a professor, might have a respectable gradus assigned to him. While the Professor of Anatomy should have a right to enter the dissecting rooms at all times, to satisfy himself that the business was conducted in a proper manner.

Unless a liberal system be adopted with regard to extra-academical courses of practical anatomy, the candidates for medical degrees cannot be certain of acquiring this valuable branch of education, since a single establishment, conducted by a single individual, will hardly be sufficient to instruct the number of students who graduate annually at the University.

The pecuniary interest of the Professor of Anatomy would not be affected by this arrangement, as all the anatomists who keep dissecting rooms, declare that they do not make anything by them.

The same general principle is applicable to the class of practical chemistry and pharmacy.

The passage in the General Report, which relates to attendance upon nine additional classes, states, that the Professors unanimously object to so great an additional attendance, excepting Mr. Russell, who entertains doubts upon the subject. My doubts arise in the first place from not distinctly comprehending what is meant by clinical midwifery.

Parturition is a natural process which is sufficiently explained in the course of general lectures, to be perfectly understood by any student who witnesses a few deliveries in a lying-in hospital, under the instruction of the assistants. So that there is not occasion for a clinical professor upon this account.

If by clinical midwifery be understood, prelections upon diseases peculiar to women in childbed, those cases bear so very small a proportion to the healthy births and recoveries, that it would require a much larger establishment than at present exists in Edinburgh, or is ever likely to exist, to furnish materials for such a course. Upon these grounds, if the statement be correct, I regard clinical midwifery to be unnecessary.

Then as to pathology. Although our knowledge of pathology has been much extended of late years, although it is at present a fashionable study, and although it might be of advantage to the students to have certain subjects presented in a collected systematic view, with the particulars fully explained in

detail; yet if the various branches of those subjects be fully taught separately in the different classes of the University, the necessity of establishing a separate class for pathology is not apparent.

Attendance upon a separate course of surgery is more a nominal than a real addition to the number of imperative classes already imposed upon the students. Since at present Dr. Monro gives a course of surgery distinct from his course of anatomy, and at a separate hour. So that the proposed separation of the classes of anatomy and surgery into two distinct professorships, would not impose any new nor additional attendance upon the students.

A very material circumstance seems to have been wholly overlooked in enumerating the nine additional classes. There is not any notice taken of the obligation, already imposed upon the candidates for a degree in medicine, to attend two classes out of five of the nine additional classes, although it is obvious that this obligation is equivalent to imperative attendance upon two classes.

Further, although attendance upon practical chemistry and pharmacy be not mentioned in the medical curriculum, and although attendance upon practical anatomy be left optional, yet all well-educated students qualify themselves in those two essential branches of education, which thereby virtually enters into the present course of their studies.

The above analysis of the nine additional classes demonstrates, that the increased imperative attendance proposed by the Commissioners is not so great as has been represented. At the same time it is sufficiently great to deserve the most serious consideration. For although I am a zealous advocate for a liberal system of education, yet I am fully aware of the caution requisite to be exercised in making any great change upon a long-established system. An attempt to accommodate an old arrangement to the extension of modern science, without duly attending to the necessity of introducing improvements gradually, is exposed to the risk of failing. A failure, under such circumstances, would be an irretrievable misfortune, since there is not in the history of all Europe a single instance of an University which had fallen from a high reputation, having ever afterwards regained its former celebrity, and having a second time become a flourishing seminary of education.

As a majority of the Committee wished the present arrangement about the five partly optional classes to remain undisturbed, I was quite willing to comply with their wishes, provided the compliance was general. But if some of my colleagues wish their classes to be made imperative, I shall then think it my duty to prefer a similar claim in favour of clinical surgery, which, in the opinion of the whole medical profession, and of the public in general, is admitted to be of the greatest utility to every practitioner in medicine. I shall not however trouble the Commissioners with any additional arguments upon this subject, as it is already sufficiently before them. I merely beg leave to quote a passage from a letter of Sir James Macgrigor (Director-General of the Army Medical Board) to Dr. Ballingall, dated 18th April, 1829.—"In no long time, I trust, that wherever there is an hospital, or even a dispensary, we shall have clinical lectures. These are the most instructive practical lessons which can be given in our profession: and I really think that the public has a right to claim these lectures from the physicians and surgeons of all the public charities."

The remarks which have occurred to me on the other topics of discussion, I choose to postpone, from my unwillingness to trespass upon the patience of the Royal Commissioners, with whose wishes I am most anxious to comply. I will feel much gratified if I have had the good fortune to suggest any hints which may contribute to promote the object of the Commission.

No. III.—Dissent from some parts of the General Report of the Medical and Surgical Professors, by George Ballingall, M.D., Professor of Military Surgery.

I have attended (as far as other indispensable avocations would admit) the numerous deliberations of the medical and surgical Professors on the course of study for medical graduates proposed by the Royal Commissioners. I have attended these deliberations for the purpose of hearing attentively the opinions of my learned colleagues; and after giving to these opinions all that careful and respectful consideration to which they are so pre-eminently entitled from me, it is with much regret that I still find myself unable wholly to concur with the sentiments of the majority, and that it becomes necessary for me to trouble the Royal Commissioners with any separate statement of my views.

With reference to the arguments which have been urged against the enforcement of an extended preliminary and professional education, I would observe, that while the Colleges of Surgeons and the Apothecaries' Company are daily raising the qualifications requisite for obtaining their diplomas, so as in my opinion to qualify the holders of these diplomas to become efficient and valuable servants of the public as general practitioners, I cannot see the expediency or propriety of granting the "*highest degree in medicine*," at such a limited expense of time and means as will enable the holders of such degree to undersell or even to enter into competition with the common *routiniers* of the country. On the contrary, it appears to me that it is only by elevating the standard of scientific education in all its branches within the Universities, that we can hold out anything distinctive or desirable in a University education, or that we can expect to keep that vantage ground which these institutions have hitherto held in public esteem.

The inestimable value of learning to the physician has been fully acknowledged in all ages, from the days of Celsus downwards. This writer, in speaking of the aid afforded to medicine by the study of the collateral sciences, has very justly observed—"Quamvis non faciat medicum, aptiorem tamen medicinæ reddit."

Concurring entirely in this sentiment, and considering, as I have always done, that some test of an extended preliminary education is the great and leading *desideratum* in any endeavour to improve the present code of regulations for conferring medical degrees in this University, I approve much of an efficient examination of the candidates upon literary and scientific subjects previous to their examination upon subjects purely professional. Were I to offer any objections to the topics enumerated by the Royal Commissioners, it would be to the examination in French; not because I underrate its value, but 1st, because it is not taught in the University; 2nd, because I do not consider it of much greater importance to professional men than some of the other living languages, particularly the German; and 3rd, because it very generally is, or very easily may be, acquired by every well educated man, particularly if he is conversant with Latin.

The preliminary examination on classical and scientific subjects, I am disposed to commit to the faculty of arts, in whose province it seems to me to lie; at the same time, it may be well to guard against any undue exactions from the candidates, by circumscribing the field of examination; limiting it to what is termed a competent knowledge of the different branches enumerated; and this extent of

949
University of Edinburgh.
Appendix to Report of Medical Faculty.

knowledge it does not seem to me very difficult to define. At Surgeons' Hall we consider a candidate for a diploma to possess a competent knowledge of Latin, provided he can read Celsus, or Gregory's Conspectus, *ad Aperturam Libri;* and some similar restriction might be adopted in regard to the other topics enumerated by the Royal Commissioners.

For reasons stated in the General Report of the medical and surgical Professors, I disapprove of the very frequent compulsory examinations in the different medical classes; but I should consider an examination of those intending to graduate at the end of each session, on the professional subjects which they had been studying during its progress, as an essential and practicable improvement.

The curriculum of medical studies proposed by the Royal Commissioners I approve of generally, but conceive that it will be difficult, if not impossible (for reasons stated in the General Report of the medical and surgical Professors) to enforce the compulsory order of attendance.

With regard to the observations, made in the General Report of the medical and surgical Professors, regarding the class of military surgery, I would observe that this class has (without any solicitation on my part) been placed by the Senatus Academicus on the same footing as the other optional classes, and that additional protection has also been given to it by a regulation of the Royal College of Surgeons, adopted during the present summer. Under these circumstances, it will not be expected that I should object to the proposal of including in the curriculum the class of military surgery, as well as the other branches of medical and surgical science which are *bonâ fide* taught in the University. As the best means, however, of enabling the Royal Commissioners to judge of the expediency of including military surgery in the number of imperative classes, I consider it my duty to lay before them the following state of the class during the by-gone session, almost the first in which the recent regulations for medical degrees have begun to operate. The class of military surgery was attended last winter by 49 pupils, 22 of whom paid fees, 16 were medical officers in the service of his Majesty, or of the Honourable East India Company, and the remainder were chiefly apprentices of myself, and of my colleagues in the Royal Infirmary. This attendance in a time of profound peace, and under circumstances by no means favourable to the formation of a class of this description, affords, in my opinion, a proof of its being adapted to the wants and tastes of a large proportion of the medical students, many of whom are educated with a view to the public service, or to colonial practice.

In conclusion, I would humbly express my approbation of the general views which pervade the course of study proposed by the Royal Commissioners, and although I may consider some of the minor arrangements as inexpedient, or even burdensome, I am quite satisfied that the reputation and success of this seminary as a school of medicine were not originally founded, nor ought they now to rest, upon any facilities for the acquisition of medical degrees, but on a zealous and efficient discharge of our duties in our several departments, and on a liberal use of those valuable establishments which we possess, for the furtherance of professional education—our museums—our library—our botanic garden—and, above all, on the advantages of an extensive and well-cultivated field of clinical instruction in the hospital.

No. IV.—Observations by Dr. Monro, upon the proposed Institution of a separate Chair of Surgery, and a separate Chair of Pathology.

Dr. Monro most respectfully solicits the attention of the Royal Commissioners to the subjoined observations, suggested by their proposal for the disjunction of Surgery from Anatomy, and of creating a separate Chair of Surgery, and also a separate Chair of Pathology, both of which it is proposed to add to the medical curriculum.

In framing the subjoined remarks, their author trusts he may be permitted to state objections both of a personal and public nature. On this occasion he advocates the cause of his successor, rather than his own, as, considering the very long period he has discharged the duties of his chair, it must become vacant soon after the proposed alterations (if passed) shall come into operation.

By my commission, which is dated 28th November, 1798, I was appointed, by the Honourable Patrons, conjunct Professor with my father, whereby they "elect, nominate, and appoint the said Dr. "Alexander Monro, senior, and Dr. Alexander Monro, junior, to be joint Professors of Anatomy *and* "*Surgery* in the College of Edinburgh, *ad vitam aut culpam*," with the benefit of survivancy to the longest liver.

By this deed, I was appointed Professor of Surgery, as well as of Anatomy, *for life;* and the Patrons could not, in my opinion, appoint separate Professors of Anatomy or of Surgery, while I continue to discharge the duties of the chair.

It is evident that, by the above commission, a legal and definite right was granted to me, to perform the duties of the Professorship of Anatomy and Surgery, which the law would protect against any new arrangement calculated to interfere with or diminish its value.

It may be asked whether, without great injustice, the right of lecturing upon Anatomy could be taken from me; and if this cannot be done, the right to teach Surgery, which rests precisely upon the same tenure, must be equally protected.

Accordingly, Surgery forms a most important part of the duties of my chair, and has invariably occupied a great portion of my attention. I have devoted much and anxious labour to the composition of lectures on Surgery, which have been constantly added to and improved, according to the progress of science; and have expended large sums of money in the purchase of books and instruments, and in making preparations, casts, and models, for the illustration of my surgical course.

If a separate Professor of Surgery is to be appointed, whose lectures are to form a part of the curriculum, all this labour and expense will be lost to me; but of this I am not perhaps in one point of view entitled to complain, if the necessity of this new Professorship were occasioned by the inadequate manner in which the duties of the chair are at present discharged. The proposition does indeed seem to imply, that in the opinion of the Royal Commissioners, surgery has been imperfectly taught in this university; and however reluctant to speak of myself, I feel called upon to state, that it has never even been insinuated, that I have been remiss or negligent in the discharge of my duty.

The truest test of the manner in which the branches of medical science intrusted to me have been taught, will be found in the fact, that during the thirty years I have been professor, the number of pupils has not diminished, notwithstanding the additional lectures given upon Anatomy and Surgery in this city, and notwithstanding that the number of teachers of these branches of medical science has nearly tripled in London, Dublin, and Glasgow, exclusive of the new medical schools which have been established at Liverpool, Manchester, Exeter, Bristol, and other towns in England, and in Cork, and

in other parts of Ireland, and notwithstanding the great emigration of our students to Paris and other places of the Continent, for the purpose of studying Practical Anatomy, and the establishment of various universities in America. I may be also permitted to state, that the books published by me on Pathology and Surgery have been very favourably received both at home and abroad, and have been much quoted by the most competent judges. A very important fact remains to be noticed, viz. that my lectures on Surgery have been placed, by the most competent and impartial judges, the Royal Colleges of Surgeons of London and Dublin, on the same footing as those of their own members.

It is evident that the obligation upon medical students to attend a separate course of lectures upon Surgery, must have the same effect upon the Anatomical Class, as if my commission as Professor of Surgery were at once cancelled; for I should be deprived of what has hitherto formed one of the most attractive portions of my course of lectures.

To take from me two branches of my course, which I can command the means of teaching, and to leave only that part, the Anatomical, which can be but imperfectly taught, from the want of an adequate supply of subjects for the illustration of my lectures, and to afford my pupils the advantage of dissecting, would be peculiarly hard, and most injurious to my chair at any time, and particularly so at present, when the want of an adequate supply of subjects for the illustration of my lectures, and for affording to my pupils the advantage of dissecting, is so peculiarly felt in Edinburgh. Mr. Warburton has intimated his intention of bringing in another bill; but it seems to me, that unless very much altered from that proposed during last session, it cannot remove the obstacles opposed to the teaching anatomy in Scotland, whilst it will foster the rival schools of London and other populous cities in England, where there are large and numerous charitable institutions, from which a number of unclaimed bodies may be derived. In Edinburgh itself, I have ascertained, upon the most unquestionable authority, that only one hundred unclaimed bodies could be got in the course of the year; and if fifty only could be had during the winter months, such would be a very inadequate supply for the lectures of all the teachers of anatomy and surgery in Edinburgh. Further, if the latitude, given to distant relatives and acquaintances for claiming bodies, shall be continued in the new bill, the average number of bodies derived from hospitals, &c., would not probably exceed twenty during the winter session.

The very inadequate provision for our students to dissect, which, unless obviated by more effectual regulations than those which have yet been proposed, will soon amount to a total privation, merits particular notice, as it operates very much against the success of our medical school. Indeed, no school of anatomy can *now* be successful without such a provision, practical anatomy being rendered imperative by the proposed code of the Royal Commission, as well as by the regulations of the Royal Colleges of London, Dublin, and Edinburgh; therefore students would be compelled to leave this university, and to resort to such places as afford means of cultivating it. The result of disjoining surgery and pathology from anatomy, must be, to reduce the chair to comparative insignificance; and it is a strong argument in favour of the utility of the combination of the two sciences in question, in one course of instruction, that they are taught by several individuals in this city, and also in London and in Dublin. The same system is followed at Gottingen, Pavia, Upsal, Heidelburgh, and other celebrated universities of the Continent.

But even if the practice had been different, attention to the nature of the sciences themselves would prove their intimate connexion.

Surgery must rest upon the basis of anatomy; and in order to render lectures on surgery intelligible and instructive, a full account of the anatomy of those parts which are operated upon by the surgeon must be premised. Surgical operations being in fact merely dissections performed upon the living body, it is absolutely necessary that the surgeon should be conversant with anatomy.

The lecturer upon surgery cannot avoid demonstrating the parts, and pointing out anatomically their form and situation. Accordingly, Professor Burns of Glasgow, in his Principles of Surgery lately published, defines surgery to be "A minute description of the relative situation, and particular connexion of the parts which may become the seat of disease, or the subject of operations." And Mr. Velpeau, a distinguished surgeon of Paris, has published two large octavo volumes on surgical anatomy, in 1826, in which a full exposition is given of the greater part of the anatomy of the human body. It is therefore evident, that the greater and more interesting part of anatomy must be given by the Surgical Professor, and consequently the appointment of a separate chair for teaching surgery alone, would either be unnecessary, if the Professor of Anatomy were to continue his present mode of instruction, or at all events, the Chair of Anatomy would be rendered nearly useless; because the same branch must be taught in the new class, and most undoubtedly no student would attend lectures on anatomy for a second or third time, as is now the custom with many. This will be rendered still more apparent, when it is recollected, that the connexion between pathological surgery and anatomy is equally intimate.

By pathological surgery is understood that most important branch of the science, the object of which is to explain the nature, symptoms, and treatment of those diseases which are connected with morbid structure. This forms a most important branch of study of the physician and surgeon; and it is the peculiar province of anatomy to explain all deviations from the healthy structure.

If, then, it be necessary for the surgeon to study those occasions, on which his knowledge and science may be brought into exercise, this must be done through the medium of anatomy; and unless the Professor of Surgery is to be confined to a mere display of manual operation, he will necessarily intrude upon the province of the Anatomical Professor, not only in his description and demonstrations of the human body, but likewise in his lectures upon morbid structure, without which his course would be utterly useless to the student. In short, the appointment of a Professorship of Surgery is to create a second Professor of Anatomy, the effect of which will be to injure most materially the interests of the present chair, without the probability of any benefit being obtained in the new system of medical instruction.

It may not be improper to add, that the means afforded for surgical instruction in this university are more than usually ample. Besides the surgical lectures given by myself, there are at present a Regius Professor of Military Surgery, a Professor of Clinical Surgery, who lectures in conjunction with one of the surgeons of the Royal Infirmary, and Dr. Hamilton treats of surgery as applicable to the diseases of women and children.

From the above facts, the Royal Commissioners will perhaps be satisfied, that surgery has not been taught in an imperfect manner in this university.

The institution of a Professor of Pathology has also been proposed.

Now, this branch of science has been for nearly a century taught by the Professors of Anatomy to a great extent, and forms a most attractive and essential part of my course. The nature and objects of

951

University of Edinburgh.

Appendix to Report of Medical Faculty.

pathology have been above enumerated: it seems, therefore, necessary only to add, that the large museum formed by the industry of my predecessors, and which has been lately very much extended, and was many years ago presented to the university, would be rendered unavailing, if I were precluded from illustrating the effects of morbid structure, and explaining the symptoms and treatment of diseases originating from that cause.

If a separate Professor of Surgery is likewise appointed, I should thus be deprived of two most popular branches of my course; the scope to my lectures would be much diminished, and I should be prevented from explaining the immediate application of anatomy to the practice of physic and surgery. My course would be most materially deteriorated, and reduced below the level of other teachers; it would be reduced to mere descriptive anatomy, by which I should lose a great number of my pupils.

The effect of the proposed change would also be highly injurious to the University of Edinburgh, and to the public service. The prospects of remuneration held out to the medical profession are uncertain, distant, and but small, and consequently the students do not belong to the more affluent classes of society. Many are educated upon gratis tickets, and some of the more meritorious are forced to support themselves during their medical education, by employing their spare hours as clerks, teachers, &c.; and it deserves particular notice, that the army and navy colonies are chiefly supplied from this class.

One certain effect of the proposed curriculum must be to increase the expense of medical education, by adding two classes; whereas at present, students have the benefit of instruction in surgery, pathology, and anatomy, upon one fee.

By many, the imposition of such a burden could not be borne, and it would undoubtedly drive them from the university, and thus diminish the number of well-educated physicians, by whom the army, navy, and colonies are now supplied.

The proposed additions to the curriculum seem calculated to give the public the impression that our present system of medical education is imperfect, while, on the contrary, it can be shown, that the Edinburgh curriculum at present is more complete than that of any similar institution.

The Edinburgh University has obtained a high reputation, and the number of its pupils has, without interruption, increased progressively, and now equals those of all the schools of London; and a greater number of valuable physicians and surgeons have been educated within its walls, than in any other similar institution.

I sincerely hope that the above observations may not be deemed by the Royal Commissioners irrelevant or obtrusive. My loss is quite apparent, but my title to full indemnification cannot be denied, for the terms of my commission exclude the possibility of doubt as to my legal rights. But it is of more general importance to view the permanent effects of the proposed alterations upon the Anatomical Chair, and it must be reduced to insignificance, if the Professor be curtailed of those parts of his subject, which are so necessarily combined with anatomical instruction.

Upon the whole, it is submitted, that the increased expense of the student's education will neither be counterbalanced by increased instruction, nor will any advantage be gained, at all commensurate with the magnitude and nature of the change proposed.

No. V.—Dissent from some part of the Report of the Medical and Surgical Professors, by the undersigned Professors.

13 July, 1829.

We, the undersigned, Professors of Chemistry, of Anatomy and Surgery, and of the Practice of Physic, concurring in sentiment with the Royal Commissioners, that attendance on two courses of Anatomy, Chemistry, Practice of Physic, and Clinical Medicine, ought to be made imperative, beg leave to express our dissent from that part of the Report of the Medical and Surgical Professors, contained in article 7th, which disapproves of such repetition—

Because we are of opinion, That the extent and importance of the subjects of Anatomy, Chemistry, Practice of Physic, and Clinical Medicine, are so great, that every candidate for the degree of M.D. ought to attend two courses of each of them.

Because we are of opinion, That (if the Royal Commissioners shall not entirely adopt the general sentiments of the Report, and shall not yield to its prayer, deprecating an extension of the curriculum, and shall deem it proper to augment, in any measure, the imperative attendance) *the* extension most likely to secure thoroughly-educated physicians, duly qualified to enter upon the exercise of their profession, and prepared to enlarge the field of medical science by their future exertions, is a repetition of the four classes above enumerated.

Because we are deeply impressed with the conviction, That the great objects of the medical education, the ultimate safety and well-being of our countrymen, as well as the advancement of the science itself, will be more surely obtained, by enforcing a repetition of the fundamental branches of the study, than by compelling attendance upon subjects less essential to the duties of the physician, or only remotely connected with them.

Because we not only entertain the opinion, that in proportion as the variety of study is enlarged, in the same ratio the attention to the essential and fundamental branches is diminished, and that the consequence will be, that students will acquire a scanty portion, or perhaps little more than a smattering of a greater diversity of knowledge, while they will be less thoroughly acquainted with that which is fundamental and essential; but we can also state this as a matter of fact, established by actual experience.

When, in the year 1823, the Medical Faculty first talked of a prolongation of the course of study to four years, the principal object held forth was to afford to the students more time and more ample opportunities for becoming thoroughly acquainted with the fundamental departments of the profession.

The Senatus Academicus approved of the addition of one year to the curriculum, but at the same time, and unfortunately, as we conceive, enlarged the variety of subjects, without demanding any repetition of the fundamental classes.

The result has been such as we anticipated; and of that result we have got the most decided proof, from the strict examination of above one hundred candidates for medical degrees during the present session.

It is a matter of fact, that though the course of study has been prolonged a whole year, the candidates have not been found better acquainted with the fundamental branches of Anatomy, Chemistry, and Practice of Physic, than they used to be; and some of us are decidedly of opinion, that a very great number of them have been, in truth, less well prepared on these branches than formerly.

University of Edinburgh.

Appendix to Report of Medical Faculty.

13 July, 1829.

We have found that, in many instances, the fourth year has been almost entirely devoted to the subsidiary branches; and we conceive has rather been employed in forgetting what had been learned of the more essential subjects in the preceding years, than in increasing an acquaintance with them.

From these circumstances, we humbly conceive that our opinion is fully warranted, that it is not advisable to extend the variety of imperative subjects; and that if any addition be made to the amount of imperative attendance already enjoined by the statute, it ought to be confined to a repetition of the essential classes already named.

All of us being Professors of about thirty years' standing, and arrived at a period of life which forbids the hope of our incumbency being prolonged much beyond the period when any regulations emanating from the Royal Commission could begin to operate, we confidently trust that we shall not incur the imputation of advocating a repetition of our classes from interested and selfish motives. Our opinion has the sanction of the Royal Commissioners themselves, of the University of Glasgow and the Medical Boards of London, the regulations of which establishments render such repetition imperative.

James Home.
Alex. Monro.

13th July, 1829.

No. VI.—Dissent from Report of the Faculties of Arts and Medicine.

27 July, 1829.

The Royal Commissioners, after mature deliberation, recommended natural history to be adopted as a necessary branch of education, for those wishing the honour of Master of Arts and Doctor of Medicine. This recommendation, however, does not meet with the approval of the Faculty of Arts; and the Faculty of Medicine, with the Professor of Botany as one of its privileged members, also refuse to admit natural history as a necessary branch of medical education. The medical faculty, or some of its members, place natural history in the curriculum alongside of the practical courses of anatomy and chemistry given by individuals not in any way connected with the Senatus Academicus. The Professor of Natural History dissents from this decision of these faculties; which decision, on the part of the Faculty of Medicine, is founded on the vast extent of natural history, and the alleged fact that all the natural history necessary for the medical student may be picked up among the other medical Professors. In answer, the Professor of Natural History begs leave to remark, that natural history is not more extensive than chemistry; and that if the natural history required by the student is to be gained from the other Professors, so also the necessary medical chemistry may be obtained from the Professor of Materia Medica,—the medical botany from the same source,—and the details and views taught in the class of the Institutes of Medicine, from the Professors of Anatomy and Medicine.

(Signed) Robert Jameson.

College Museum, July 27th, 1829.

No. VII.—Note by the Secretary of the University, appended to the Medical Report.

The secretary of the University of Edinburgh takes the liberty of annexing to the Report upon the Medical Curriculum, proposed by the Royal Commissioners, a respectful representation, that, if carried into effect, it will materially affect the interest of the office of secretary.

The remuneration of the secretary for the unremitting attention which the due discharge of the duties of his office requires, the responsibility with which the exercise of his functions is connected, and the expenses to which he is necessarily subjected, is entirely derived from a fee of 5*s.* upon every college certificate of the course of their studies granted to students, and of 1*l.* 1*s.* on every diploma to a graduate. None of these fees have been increased for many years, and some of them not since their first institution. Nor has the great additional labour, responsibility and expense incurred since the present incumbent was appointed to the office, been more than adequately compensated by the increased number of certificates and diplomas granted.

By the inquiries of the Royal Commission, the secretary has been called upon to devote much additional time and attention to the business of the University, and by the proposed alterations in its constitution and practice, much additional labour will be required of him; when at the same time one great source of his remuneration, the granting of certificates, is to be annihilated; and the other, the fee on diplomas, probably very much reduced: the secretary therefore respectfully represents, that some means may be devised for securing to him a fair and adequate remuneration for his services in future.

(Signed) Andrew Duncan.

IV. REPORT OF THE FACULTY OF ARTS.

Report on Provisional Resolutions.

Faculty of Arts.

The Faculty of Arts, to whom the provisional resolutions of the Royal Commission, as far as regards their department, were referred by the Senatus Academicus, has agreed to the following general report; reserving to each of its members their privilege of stating more fully, in what manner he conceives the changes proposed would affect his own chair in particular.

The members of the Faculty, in entering on the consideration of measures which, if carried into execution, would so materially affect the Universities of Scotland, have endeavoured to examine the subject in all its bearings, in a spirit of calm and dispassionate inquiry, and to discharge from their minds all improper bias in favour of a system of public instruction, to which, as a whole, they profess themselves firmly attached, without being blind to its defects, or unwilling to see them removed.

At the same time, in speaking of an establishment of ancient date, which has grown up along with other institutions of the country, sharing in, as well as contributing to their progress, and gradually accommodating itself to the wants and necessities of the community, they cannot disguise their opinion, that innovations, in order to be improvements, ought to be introduced cautiously and slowly, and accompanied with practical ameliorations in the earlier stages of public education, with which the efficiency of college discipline is indissolubly bound up.

Junior Greek.

I. The first provisional resolution recommends "that the elementary Greek classes in the different Universities be discontinued."

The Faculty agree with the Royal Commission in thinking it desirable, that the first elements of Greek should be taught elsewhere than within the walls of the University: and they have the satisfaction of being able to state that, in the College of Edinburgh, at least, the junior Greek class has

953

University of Edinburgh.

Report on Provisional Resolutions.

Faculty of Arts.

been gradually assuming such a character, as promises in time to render purely elementary teaching unnecessary. This inference they think may be drawn from the following circumstances:—

1. That the number of those who enter the junior Greek, totally unacquainted with that language, has for the last twenty years been regularly decreasing; and, in the present session, out of a class little short of 120, does not exceed 20; 2. That in consequence of this change for the better, the Professor is now in the habit of beginning to construe Greek authors within ten days after the commencement of the session. They are aware that this change is principally owing to the greater attention that has been paid, within the time mentioned, to the teaching of Greek in the great schools of the metropolis.

But the Faculty, at the same time, are of opinion, that until the primary schools are placed on a better footing, it would be highly injurious to the general education of the country to close the door against those who go to college to obtain what they cannot procure at home, and to debar the Professor from directing the students of this class to the means of supplying, by diligence and private study, deficiencies which are their misfortune, and not their fault.

The Faculty will sincerely rejoice in any measure tending to accelerate the improvement, which the facts now stated seem to indicate, in the preparatory teaching of Greek; but such a measure, it appears to them, must begin with the parochial burgh schools. These schools, established so generally over Scotland, have always been regarded as nurseries, out of which the youth of promising talent might be transferred to the Universities; the College being thus understood to come in aid of the imperfect means of initiatory instruction afforded by the country schools. And it ought not to be forgotten that, in these seminaries, the sons of the clergy, and of the middle and lower ranks of our rural population, who constitute a great majority of the divinity students, receive their school education. In order, therefore, to render the instruction in colleges less elementary, it appears to the Faculty indispensable, that the means of better preparation be provided in the anterior stages; and this, they conceive, can only be done by so raising the condition of parochial teachers, as to attract to the profession men of superior attainments. For, if the entrance qualification in Greek be raised, as the Royal Commission propose, far above the point which the primary schools are capable of reaching, it will not only cut off the present supply of alumni to the Universities, but it will dry up the very sources from which that supply is drawn; because the existence of such a class of students as that now referred to, is continued solely by the opportunity which the Universities now afford, of taking up the instruction where the country schools leave it. To those pupils who bring higher attainments to college, the senior and third Greek classes are open, without the necessity of attending the junior: and the very fact of such numbers joining the latter in preference to the former, is a proof of the incompetency of the preparatory schools. Till reform, therefore, begin in the right quarter, and be left to operate slowly and silently, the Faculty foresee nothing but mischief from the adoption of the measure proposed. If such reform be judiciously set about, where alone it can be effectual, the Faculty feel confident that the Professor of Greek will not be found backward in adapting his instructions to the improved attainments of his pupils.

First Mathematics.

All the arguments against the abolition of the junior Greek apply still more forcibly to the proposed discontinuance of the first mathematical class. Elementary geometry has always been considered an appropriate subject of academical instruction. Even in Cambridge, where the exact sciences are in such repute and demand, it must be known to the Royal Commissioners, that the tuition of an undergraduate begins with the Axioms of Euclid; and that the tutors do not consider it essential that the pupil should have received any previous training in mathematical knowledge.

Board of Examiners.

II. The next provisional resolution is that, which proposes to erect a Board, composed of certain persons, not being professors, by whom all intending to enter the language classes for the first time are to be previously examined, and without whose sanction the Professor is not to be entitled to enrol any student as a member of his class. From this proposal the Faculty respectfully take leave to record their unqualified dissent, upon the following grounds:—

Reasons of Dissent.

1st. Without dwelling on the difficulty which, they conceive, amounts nearly to an impossibility, of finding properly qualified persons to perform ably, discreetly, and impartially, the responsible and invidious task of examiner, it appears to the Faculty that the system of previous examination proposed would infallibly exclude from a college education a numerous class of youth, who now resort to the University from all parts of the country, with very moderate acquirements indeed, but with the strongest desire of improvement; who claim nothing but admission to the means of obtaining that knowledge which is not to be had in the districts they come from; and who, in a majority of instances, make exertions, and attain a proficiency in the course of the first session, which cannot well be conceived or appreciated by those who have not watched their progress.

The Faculty may be permitted to mention one instance among many which are familiar to all of them, of what may be accomplished by students of this description, whom the proposed regulations would consign to the poverty and ignorance from which they are just beginning to emerge. A youth of twenty entered the junior humanity class, in the end of October, 1826, who had previously studied Latin only eighteen months at a remote parish school, and eight or ten weeks more, under circumstances far from favourable. His knowledge of the language was, of course, extremely scanty and imperfect,—such, indeed, as to have insured his immediate rejection by any Board of Preliminary Examiners. Of prosody, *e. g.*, he was so ignorant, that it was necessary to explain to him the meaning of dactyle and spondee. Yet so rapid was his progress, that in the month of March of the same session, he took the lead in almost every branch of the business, and gained the two highest prizes. In the senior class, last session, his proficiency may be judged of, from the fact of his having carried off the first prize for Latin verses, against a very formidable array of competitors, from English as well as Scotch schools. The Faculty cite this as a strong, but by no means a solitary example, of extraordinary proficiency in the class of youth whom the proposed resolution would exclude from the benefits of a college education. They state with confidence, that a large proportion of the creditable certificates they sign at the close of each session are granted to individuals of this class, whose prospects would have been irretrievably blasted by the establishment of a preliminary examination. Many would be deterred, by the very name of such a tribunal, from going to college at all; and if it were anything but a name, most of those who did come, would be sent back with a stigma affixed. And yet it is out of the class now spoken of that our pulpits and schools are at present supplied with their greatest ornaments, and to which the general literature, and intellectual character of our country have been deeply indebted.

2ndly. The resolutions enjoin that intending students, previously to entering the junior Greek and Latin classes, should undergo a strict examination, *inter alia*, on the first three Books of the Anabasis or Cyropædia of Xenophon; and on the Odes of Horace, or the first five Books of Livy. Now the Faculty are of opinion, that it is impossible so to define what is to be understood by a strict examination, as not to leave the interpretation of it very vague and loose; and that thus, according to the particular views, acquirements, or humour of the examiner, it might be made to comprehend anything, from the parsing and verbal translation of an easy passage, to questions that might puzzle the best scholar. That there is, therefore, no security against this examination being used, either to exclude the most of those who might have the courage to present themselves, or to admit all without exception; that, if all were admitted, (the interpretation calculated to be least injurious to the interests of learning,) the new scheme would lapse into total inefficiency: if, on the other hand, a rigorous examination were to be insisted on, the practical effect would be to exclude the modest and most deserving of encouragement.

3rdly. The Faculty are of opinion, that to raise the qualifications for admission into the language classes, without hinting at any projected improvement in the primary schools throughout the country, is somewhat preposterous; and they cannot perceive how the cause of literature and science is to be promoted, by leaving the schools demonstrably incapable of giving the preparation required, and at the same time precluding the Universities from employing the only means left of remedying the evil.

If, indeed, it be true that some measure for improving the schools is in the contemplation of the Royal Commission, the Faculty will hail it as a public benefit; but in that case they are inclined to think, that not two years, or five, which the Royal Commission proposes, but twenty or thirty at least, must elapse before even the best devised plan can be expected to produce the desired effect. On the other hand, if no such intention exists, and it be supposed that the mere enactment of these resolutions into a law will of itself accomplish all the beneficial results anticipated, the Faculty, without presuming to impute such a notion to the Royal Commission, think it right to express their belief, that it is altogether visionary: and moreover, that inasmuch as there are no peculiar emoluments, privileges, and immunities flowing from attendance at a Scotch University (beyond the knowledge there to be acquired), one immediate result of the new regulations would be, to tempt the Dissenters, now a numerous and united body, to add other chairs to that of divinity, which they already possess, and to offer admission to their seminary on such terms, as would drain, if not annihilate the Universities.

4thly. The Faculty believe they are correct in asserting, that the examination of youth previous to admission as students, by a Board of sworn Examiners, not being professors, (which, in Scotland, is tantamount to saying, not belonging to or connected with the University,) is a practice altogether unknown in any College or University of the empire. They regard it, moreover, as subversive of the right enjoyed by parents in all time past, of sending their sons, with consent of the teacher, to any institution for education throughout the country,—more especially as, with very few exceptions, they have no object in view for their children, but improvement in knowledge and professional qualification, and ask no boon but an attestation of proficiency and character, signed by the Professor under whom they have studied. Nor can the Professors themselves altogether discharge from their minds a feeling of personal indignity being offered to them, by the proposal of an extra-collegiate body, on whom they are to be dependent for the formation of their class; as if they and their brethren were to be viewed with a suspicious eye, and considered as persons entirely under the sway of mercenary motives, and so disposed to abuse power, that none which it is possible to take away should be left them. And although they are aware that the Royal Commission are as far as possible from having such intention, they find it more difficult to persuade themselves that such a measure would not degrade them in the estimation of the public, and materially hurt their usefulness.

The Faculty conceive, then, that it would be rash and unwise to attempt, in the Universities of Scotland, an innovation which appears to them to have nothing in theory to recommend it, while it certainly derives no support from usage or experience elsewhere.

The Faculty cannot take leave of the regulation they have been considering, without expressing the feelings of dismay and alarm with which they contemplate the injury it is calculated to inflict on the studious youth, whose means, both pecuniary and educational, are limited; and they must be permitted to say, that they would look upon the enactment of it as a blow struck at the peculiar pride and glory of Scotland,—the annals of whose literature would have wanted some of the brightest names that adorn them, had the system, now recommended as an improvement, been earlier adopted. But they can scarcely help thinking that they have occupied too much time in arguing against a novelty like this, which appears to them not more adverse to the interests of learning, than inconsistent with the hitherto unchallenged rights of his Majesty's subjects. It may be competent to fix the terms of admission to a company, society, or corporation, the members of which, by the very act of admission, acquire a share of power, privilege, and emolument. But the Faculty of Arts is not such a body; they have nothing of the kind to bestow except degrees, which are seldom contended for by a greater proportion of their pupils than one in the hundred. In every other respect their class-rooms, they conceive, are open to all who are able to satisfy the professor of their fitness.

The Faculty are of opinion, that the proposed extension of the term of compulsory attendance to seven months would powerfully co-operate with the system of preliminary examination to exclude from college a numerous class of most meritorious students, whose means are barely sufficient to maintain them at the seat of the University, during the shortest term admitted to be a regular session by the present regulations; and that this exclusive tendency would be still further increased by the necessity imposed upon them, of being on the spot ten days before the commencement of the session—an interval which would impair their resources without adding to their knowledge, while there is reason to believe it would not improve their morals.

It appears to the Faculty that this is one of the cases in which (a wise legislator feels) it is proper to be guided, not by what is desirable in the abstract, but by what is practicable in the circumstances, and accordant with the habits, of the people for whose benefit the public institutions of the country were originally framed.

V. The Faculty are of opinion, that the provisional resolution, which ordains that the entrance examinations above described shall apply to *all* students, *without any distinction*, intending to enter the Latin, Greek, and Mathematical Classes, is one which, if they rightly comprehend its import, would, in addition to the other mischief it is likely to occasion, cut off the resort of that class of students who, without professional views, or being disposed to submit to public examinations, are desirous to attend the prelections of a professor on subjects of classical and scientific interest. The Faculty are

955
University of Edinburgh.

extremely unwilling to believe that this exclusion of what have been called *amateur* students, was contemplated by the Royal Commission in the framing of this resolution, as most of its members must be aware how much honour has accrued to the town and University of Edinburgh, from the conflux of students attracted thither by no motive but the love of knowledge. Yet it seems difficult, in any other way, to explain the words of the resolution just quoted, or to account for the proposal of arrangements which leave the student no choice of taking a *third* session of the Humanity Class. The Faculty find it equally difficult to reconcile with the professed object of the Royal Commission two of their provisional resolutions; one of which narrows the avenue to the Language Classes almost to the point of exclusion, while the other dispenses with all examination in classical knowledge, before entering the Classes of Mathematics, of Logic, of Natural and of Moral Philosophy.

VI. The Faculty concur so far with the Royal Commission in thinking, "That the examinations in all the classes ought to be as general and as frequent as circumstances will admit;" but they cannot go all the length of the provisional resolutions, which ordain, that in the Logic, the Moral and the Natural Philosophy Classes, there shall be an hour of examination for every hour of lecture, and that attendance on both hours shall be imperative on all. On the contrary, they conceive that compulsory attendance on examinations five hours every week in the classes just named, would be found equally oppressive by professors and students; and that attempts to enforce the regulation would be likely to produce irritation in both, and thus endanger the good feeling which at present happily subsists between the teachers and the taught. While they are desirous, therefore, to see the general recommendation of the Royal Commission followed out, they have no hesitation in thinking that the time allotted for examination on lectures is too great, on account of the difficulty, not only of keeping up the attention and employing the time usefully, but also of the difficulty of finding an hour, when even the greater part, far less the whole of the class, could attend.

Again, in proposing to make the exercises, themes, &c., as well as the class examinations, imperative on all, the Royal Commission do not appear to have sufficiently weighed the extreme difficulty of enforcing such a regulation. A door would thus be opened for practising frauds and impostures of various kinds, which the Faculty cannot flatter themselves they would be more successful in preventing, than other teachers who have acted under compulsory regulations of this sort. To what extent it is possible to procure written exercises, from students in these advanced classes, where the youth cannot be treated like schoolboys, must always be left to the zeal and discretion of the individual professor; who, in the opinion of the Faculty, will contribute more to the eliciting of talent, and to the general intellectual improvement of his pupils, by appealing to the principles of honour and generous emulation in the matter of written exercises, than by enforcing, contrary to his own convictions, any mode of compulsory regulation.

The Faculty would respectfully submit to the Royal Commission, whether, in multiplying imperative enactments like these, there be no danger of impairing that love of study which has hitherto so honourably distinguished the pupils of this University. They conceive that the most efficient control over academical youth is to inspire them with the desire of knowledge, and the ambition to excel, and that these are principles of action which over-regulation and petty exaction have a tendency to extinguish rather than to cherish.

They cannot, therefore, too strongly deprecate any approach to a system which should have a tendency to reduce college attendance to a struggle on the part of the youth, to take the smallest amount of the instruction thrust upon them, and the *maximum* of their own way in all things forbidden.

VII. To the public examinations at the close of the session, in presence of the parents and friends of the students, the Faculty would offer no objection, if they could be persuaded that the youth would not thus be exposed to the hazard of having the latter weeks of their session consumed in getting up exhibitions of more show than real utility, and thus compromising, in some degree, the dignity of an University.

VIII. With regard to the provisional resolution on the subject of fines and impositions, the Faculty have no wish to argue at length in defence of a practice—very partially and sparingly acted on in this University—which, they are aware, those who view the matter theoretically, are naturally enough disposed to condemn. They are informed by the Professor of Humanity, that, having successfully employed the writing of tasks as a substitute for corporal punishments in the High School, he entered on his present duties, with as strong a prejudice against fining as any member of the Commission can entertain; but that having made trial of both methods, he entirely concurs with the Faculty in thinking, that a well-regulated system of small fines, which trench on the offender's pocket-money, and, being thrown into the general fund for class-prizes, tax the idle for the benefit of the diligent, is one of the least objectionable modes of aiding academical discipline, and far more direct and effectual than such impositions as are *set* indeed at the English Universities, but which, it is well known, are very rarely *written* by those who can afford to employ a transcriber.

IX. The Faculty do not feel themselves called upon to dwell at any length on the three remaining resolutions relating to the curriculum in arts—those, viz. intituled Political Economy, Natural History, and Natural Philosophy. Though they desiderate more extended views on the partition and arrangement of the different branches of knowledge, than these resolutions seem to them to contain, the Faculty offer no objection to anything therein proposed. On the contrary, they rejoice in the prospect afforded of so important a science as Political Economy being regularly taught in all the Universities of Scotland; and they anticipate much good from the institution of a class of Higher Natural Philosophy. But, while they profess themselves willing to listen to any plan for improving the system of public instruction, whether by erecting new chairs, or by consolidating old ones, they may be permitted to express their surprise at the sentence of condemnation pronounced by implication upon the Chair of Rhetoric in this University—a chair which has already contributed so much to cherish and diffuse a taste for elegant literature in Scotland, that the Faculty cannot but regret that the Royal Commission should contemplate the abolition of it, and that, without seeming to provide for the fulfilment, elsewhere, of its important functions. The Faculty must also express their regret that the Commissioners should have wholly overlooked the Class of Universal History; which, notwithstanding the acknowledged importance of its object, has hitherto remained the only class in this faculty, and the only class regularly taught in the University, which is altogether without protection. They would therefore recommend, that if any alteration is made in the curriculum, attendance on this class should be required to qualify for a degree in arts.

University of Edinburgh.

Report on Provisional Resolutions.

Faculty of Arts.

X. Before quitting this part of the subject, the Faculty beg leave to call the attention of the Royal Commission to the fact, that the provisional resolution which ordains, that in the fourth year of the curriculum the student shall attend the Natural and Moral Philosophy Classes together, is inconsistent with the regulations of the Church, which require (and as the Faculty are inclined to think more wisely) that these classes shall be attended, each in a separate session.

Having thus briefly explained their views on the most important points connected with their department of study, in the proposed alterations of the present system of academical instruction, the Faculty deem it unnecessary to enter into a minute examination of the other regulations contained in the provisional resolutions.

They have long been impressed with the propriety of making some change in the manner of conferring degrees in arts; and they have been engaged for some time past, in conjunction with the Faculties of the other Universities, in devising a plan for securing greater attainments, and raising the honour in public estimation—though, from the difficulties in which the subject is involved, they have not yet matured their views. They are fully aware of the difference that must always exist between a Scotch degree of arts and an English one—the former leading to nothing but the honour and credit that may be attached to it; the latter, besides these, conferring distinctions and civil privileges, and being an express condition of ecclesiastical preferment.

In this University, the average annual number of degrees in arts, granted for the last ten years, does not exceed six; and while the Faculty are sensible, that to raise their value, the difficulty of obtaining them must be increased, they feel that there is a risk of increasing it so much as to extinguish the demand altogether.

With respect to the requisite qualifications, they have the satisfaction of thinking, that their views coincide with those of the Royal Commission, except in one or two points of detail, which are not such as to occasion any serious difference of opinion.

On the propriety of making the examinations for degrees public, the Faculty entirely agree with the Royal Commission: and this publicity, indeed, they regard as the most effectual improvement that can be made. But they object to the examinations being conducted by sworn examiners. From the words of the provisional resolution on this point, the Faculty are at a loss to determine whether the Royal Commission intend these examiners to be professors or not. If not, they will only say, that they never can consent to surrender to a non-descript and unacademical body, a power which they alone, it appears to them, are entitled—and, in the case of their own pupils, alone qualified to exercise. The Faculty cannot imagine it to be intended by the Royal Commission, that, in granting a diploma, conferring an honour which emanates solely from the Faculty, and to which their signatures must be affixed to give it any value or validity, they are to be dictated to and overruled by a set of men who require an oath to secure their performance of a duty—that duty, too, being one which, from ignorance of the history and studies of the candidates in their academical progress, they never can perform well. The only alternative that seems to remain, is, to suppose that the sworn examiners, on the occasion of granting degrees, are meant to be Professors. But as, on this supposition also, the Faculty cannot persuade themselves that the Royal Commission have so little faith in the honour of the Professors, that they cannot trust them to discharge a duty conscientiously without the sanction of an oath, they forbear to enlarge on this view of the matter; more especially as they feel assured, that not one of their number would submit to such degradation.

In reference to the last provisional resolution for restricting the degree of B.A. to those who have had a regular University education, the Faculty take leave to state that they are most willing to concur in any measure that will establish an intercourse of good offices between the Universities of the sister kingdoms, and an admission *ad eundem* from the one to the other; but they trust it will be distinctly understood, that no privilege of this kind can be granted, which is not reciprocal.

Prizes. On the subject of prizes, whether limited to the class they are proposed in, or open to competition among all the regular students, the Faculty are happy to express their cordial concurrence with the views of the Royal Commission. Prizes of the former kind have long been regularly bestowed every session, in all the Classes of the Faculty of Arts; and if they had entertained any doubts of the beneficial effects of the other kind, they would have been removed by the successful example to which the munificence of the Royal Commissioners has enabled them to appeal.

Hours. The scheme of hours proposed by the Royal Commissioners completely subverts the existing order which the Faculty, after much deliberation, adjusted finally last session, in a manner which they find to have produced almost universal satisfaction. But they think it unnecessary to dwell on this matter, till it shall appear whether those regulations with regard to examinations and additional hours of teaching, which render such a change necessary, are to be persisted in.

Fees. Still less do they think themselves called upon to express an opinion on the proposed reduction of fees and class dues, not conceiving that any measure, materially encroaching on the vested rights of the several Professors, can be in the contemplation of the Royal Commission; and being under no apprehension if it should, that such a measure would ever be countenanced by the Government of the country, or receive the sanction of his Majesty.

Signed by order of the Faculty,
ANDREW BROWN, *Dean.*

APPENDIX to the REPORT of the FACULTY of ARTS.

College, 13*th December*, 1828.

Appendix to Report of Faculty of Arts. The Librarians beg leave to direct the attention of the Senatus to a proposal in the communication from the Royal Commission, which fixes the fee to the library, on matriculation, at 7*s.* 6*d.*; and "all other class fees whatever" at 5*s.*

If this last payment is to relieve the library fund only of the present allowance to the *Janitors*, leaving every library expense to be defrayed from the fee of 7*s.* 6*d.*, the effect will be ruinous to the Library. There is great need for increasing, instead of lessening, its income.

957

University of Edinburgh.

Appendix to Report of Faculty of Arts.

By a report made to the Senatus in March, 1825, the salaries of the officers of the Library were stated at	£250
Since that time, it has been necessary to employ an additional servant, at	50
The fuel and management of stoves in the new buildings exceed the Patrons' allowance last year by	40
Vellum for diplomas, and writing, nearly	50
Stationery, postages, parcels, and extras, nearly	50
Interest of 2500*l.* expended in repairing books	110
When the great hall is ready, one additional attendant *at the least* must be employed, at	50
	£600

Eighteen hundred students, matriculating at 7*s.* 6*d.*, will yield 675*l.*; and, if the graduations produce 150*l.* more, there will be a sum of 225*l.* for the annual purchase and binding of books,—less than one-half of the sum which is so expended at present, and which is felt to be utterly inadequate to the wants of the Library.

Observations on the Provisional Resolutions, by Dr. Chalmers.

Pennycuik, August 7, 1829.

Remarks in reference to Provisional Resolutions.

Dr. Chalmers.

Dr. Chalmers begs to inform the Right Honourable the Commissioners on Scotch colleges, that the enclosed paper was drawn up by him some months ago, and sent to the Senatus Academicus, with the view that it should accompany any general report of theirs on the subject of the provisional regulations. He very much regrets that he was prevented by illness from attending the college meeting at the time, and that latterly his distance from Edinburgh has kept him away from the subsequent discussions—else, he should have dissented from the opinion of his colleagues, on the subject of a preliminary examination at the admission of students into the university.

The enclosed was returned to him a few days since, with a notice that the Senatus had declined to transmit it to the Royal Commission, it not being any part of their proceedings, but had left it to himself to forward it, if he should deem it right. He thinks it best, in these circumstances, to transmit it unaltered.

Follows a Copy of the enclosure:—

"Dr. Chalmers, for reasons which he has already stated in full to the Commissioners, thinks well of their primary enactment, which provides for a high preparatory education—and furthermore, thinks that there is nothing in the circumstances of the country which should prevent the adoption of it, at the time specified in the scheme. But he also thinks, that this most wholesome enactment has not been rightly followed up by the subsequent ones.

"In the first place, he holds that there is a want of keeping and right adjustment between this first enactment, and that which imposes such a number of teaching hours upon the language professors. It is well that so enlightened a scholastic course has been prescribed, previous to the entrance of students into the university—but the more lengthened that scholastic course is, with all the greater safety and propriety may those who have described it, be confided to the manly and liberal discipline of a college. The Commissioners seem to have overlooked the distinction between the scholastic and the professional treatment of young men; and after having most properly enacted for them a more lengthened period of tuition under the schoolmaster, and so qualified them all the better for the tuition of the professor—they, instead of transferring them from the schoolmaster to the professor, are for transferring them from one set of schoolmasters to another.

"But there seems to be a still more glaring inconsistency in the scheme. The enactment of a high preparatory education, indispensable as it is to the elevation of science and scholarship in our universities, will unavoidably expose all the classes to a very great reduction in their attendance. More especially, it will go to annihilate the first language and mathematical classes—and the effect on the income of the respective professors will be tantamount to a sentence of excision on the emoluments of those classes which are the most lucrative and the best attended. It is altogether a vain expectation, that after the demand for their present elementary teaching has been extinguished, this will be replaced by an equal demand for the high education of the newly ordained and ultimate classes, whether in the language or mathematical departments. It is the lesson of all experience, that in proportion to the rigour of the scientific, or to the refinement of the literary education, the demand falls away—and that, therefore, neither the one nor the other can be upheld by fees alone. There would be great personal injustice done to all the Professors, and more particularly to those who have been now specified, if, for the unavoidable diminution in the amount of their fees, there be not full compensation made by the increase of their salaries. Else it will follow, that in proportion as the character of their work is raised, their condition will be degraded—and that those individuals whom the Commissioners propose to place on higher positions in regard to employment, will be reduced to lower positions than they now hold in the scale and status of society. It will invariably be found, that the interest and the prosperity of high science must decline under the establishment of that narrow system of economy, whose single or paramount object is to have all sorts of work done as cheaply as possible. Under a regimen of unsparing parsimony, the work of high scientific education, as it cannot be done cheaply, will not be done at all. The two cannot amalgamate; and hence an utter contrariety between the first enactment for a high preparatory education, and that other enactment, which not only is silent on the subject of salaries, but which proposes a reduction in the fees. Attendance on the classes should in no circumstances be necessariously gratuitous, and the fees of them all should be equal."

Representation of the Professor of Greek to the Royal Commissioners, respecting his Classes.

Professor of Greek.

The Professor of Greek in the University of Edinburgh, while he cordially acquiesces in almost every part of the representation of the Faculty of Arts, respecting the provisional resolutions, as promulgated to them by the Royal Commissioners, considers at the same time that he would not do justice to the community, to the chair which he has the honour to occupy, nor to himself, if he were not to convey to the Royal Commissioners more full and ample information respecting the effect of these resolutions, not only upon the Greek classes in the universities, but also upon the classical literature of the country, than could be comprehended in a general report.

University of Edinburgh.

Remarks in reference to Provisional Resolutions.

Professor of Greek.

He was perfectly aware, from observations repeatedly obtruded upon the notice of the public, that a prejudice was endeavoured to be excited against the continuance of a junior Greek class in the universities of Scotland, as unbecoming the dignity of such institutions. If that Greek class had continued to be the only one taught in the universities, when the wants of the country no longer required it, there would have been room both for complaint and also for reformation. But it is well known that *two other higher* classes are open, in this university at least, to such students as have mastered the principles and made some progress in the study of the language. It is also well known that the junior class was instituted in the colleges of Scotland to supply a defect in the public and parochial schools: and the question of its utility or inutility may now be decided by the inquiry, whether these schools are in such a state as to render a junior class unnecessary in the universities of Scotland. To those who look only at the High School, the Edinburgh Academy, and a few of the provincial seminaries, the junior Greek class will probably be thought unnecessary; and yet it has been observed that a considerable number from all these seminaries do, every session, join that class. But suppose every student from these schools was qualified to attend the higher classes, the Professor may be allowed to state that they form but a small proportion of the Greek students at this university. Of those who come from the parochial schools, *more than the one half join the junior class*. What, it may be asked, is the cause of this? Simply, that the teachers in these schools either do not possess sufficient knowledge of the language, or have not time and opportunity to carry their pupils beyond the mere elements. The Professor presumes that the experience of more than twenty years, during which time students from almost every parish in Scotland have attended his classes, has enabled him to form a tolerably correct estimate of the extent to which the study of the Greek language is carried in the schools of this country. He is happy to be able to state that there is a progressive improvement; because, of late years, very few have entered his junior class altogether unacquainted with the elements of the language. This has enabled him, as is stated in the Report of the Faculty, to commence reading some Greek author almost at the very beginning of the session, instead of spending, as formerly, nearly the one half of it upon the rudiments alone. This progressive improvement has been effected by the appointment of a better class of teachers in the public and parochial schools of Scotland. If, then, due encouragement were given to that useful body of men, higher qualifications would be required of them, greater scholarship would be shewn, and the *necessity* of teaching the elements of the Greek language in the universities would be gradually superseded. At present, however, the Professor is convinced, that not one parochial schoolmaster out of *twenty* is capable of carrying forward his pupils to enable them to join the second Greek class, and not one in *fifty* could bring them up to the standard of admission proposed by the Royal Commissioners. He has no hesitation in saying, that the defect cannot be attributed to him and his fellow-labourers, but to the miserable state in which the schoolmasters of Scotland are placed, and the total want of encouragement to young men of talents, that not one of his junior class could undergo such an examination as is proposed, and scarcely the one half of his second, at the commencement of the session.

He requests the attention of the Royal Commissioners to this fact, that several young men, from 18 to 20 or 22 years of age, attend the junior class, with the view of qualifying themselves to become teachers. Their previous education has, in general, been very ill conducted. Some of them are either self-taught, or have wrought their way with a little occasional assistance. Their ambition is limited to the office of a public or parochial schoolmaster; and with persons of this class most of the schools are filled. To all these the doors of the Greek class-room would be effectually closed; and thus the country schools, instead of being filled with well-qualified teachers, made acquainted at the universities with proper discipline, and the most approved modes of instruction, would, of necessity, be occupied by such as possessed little or no knowledge of classical literature. This would infallibly be the consequence, if the measures proposed were carried into effect; for what parents would send their sons to schools, where all the knowledge of Greek they could possibly obtain, would not bring them near the standard proposed for their admission to the universities? And what candidates would be found for any of the parochial schools, qualified to give their pupils either an accurate or extensive knowledge of the languages of Greece and Rome? For it is of some importance to know, that it is only since teachers were enabled to spend a session or two at college, the improvement in classical literature throughout the country has taken place. If they are *now* to be excluded, as they must be by the system proposed, one principal source of the prosperity of the universities will be dried up, the Greek classes will be ruined, and the parochial schools will relapse into that state of ignorance and torpor in which they existed half a century ago. The Professor of Greek is certain that he states the opinion of all those qualified by *experience* to judge of the subject; and he conceives that he would ill discharge his duty, were he to conceal his conviction, that the premature suppression of the junior classes in the universities of Scotland, and the system of previous examinations, would be attended with the most ruinous consequences.

Why the existence of a junior Greek class should be thought unbecoming the dignity of an university, he is at a loss to comprehend. It must be equally undignified to teach the elements of Mathematics, or of the Hebrew and Oriental languages. But he must be allowed to say, that a Professor of Greek will not do his duty, if he does not, when teaching the elements of the Greek language to his students, convey to them more general information than they are likely to receive at any public school. He thinks that important information may be given, even from the alphabet, and the peculiar structure of the language compared with other tongues. At the period of life when young men generally attend the junior Greek class, they are, or should be, better prepared, both for understanding and relishing such views, than mere schoolboys.

He is not unaware that comparisons have often been made between the state of Greek literature in this country and in England, to the disadvantage of the former. He considers these comparisons neither candid nor just, but as founded, in a great degree, both in prejudice, and a misconception of the extent to which Greek literature is carried in both countries. There can, indeed, be no room for comparison, when the poverty of the Scottish schools and universities is contrasted with the rich endowments of the English: and the total want of stimulus in the former, to encourage the acquisition of high classical attainments, is felt and perceived in every department. No licentiate of the Established Church obtains a living, in consequence of his literary or scientific merits. No candidate for the highest medical honour is obliged to know a single letter of the Greek alphabet, though almost every one of the terms of his art is borrowed from the Greek language: and few of the votaries of Themis, it is presumed, are required to be deeply read in the works of Demosthenes or Plato. Yet under all these disadvantages, the Scottish universities do produce more men of talents and learning than is generally known or willingly acknowledged. Our youth quit the field without the opportunity, except on a late occasion, of showing either their talents or their acquisitions; and because these are not known, they are uncharitably supposed

959.

University of Edinburgh.

Remarks in reference to Provisional Resolutions.

Professor of Greek.

not to exist. The Professor may, perhaps, be allowed to state, that he had lately an opportunity of forming an estimate of what some of his own pupils could perform, compared with several of an older standing at an English university. There might be a feeling of partiality, but he would stake his credit upon the equal, if not superior scholarship in all the essentials of good learning, of some of his more advanced students. It is a most mistaken notion, that attendance alone on lectures will ever make a finished scholar. They no doubt put him in the way, and point out the path he ought to pursue. But the best part of his learning must be acquired by his own study, and his hopes and aspirations must be fed by the prospect of substantial honours and rewards. When the "premia in *medio posita*" are exhibited to the eyes of students, then may the Royal Commissioners expect and demand high attainments; and then also will all those, who deplore the wane of Scotland's classical glory, be gratified by its speedy renovation. But till then, it would be as idle to expect it to flourish and bloom as fair as that of England, as for the husbandman to look for an abundant harvest, if there be no refreshing rain to quicken into vegetation the seed he has committed to the soil, and no light and heat to bring it to maturity.

The Professor of Greek judges it unnecessary to make any observations upon the resolutions as they would affect his second and third classes, being convinced that these classes would be almost annihilated by the previous examinations. He has now only to state to the Royal Commissioners, that if the resolutions should be attempted to be carried into effect, his income, derived almost wholly from the students attending his classes, would be seriously diminished, and that he would, in consequence, look to them for an indemnification for the loss he would sustain. His commission entitles him to all the rights and privileges which his predecessors enjoyed, and these, he sincerely trusts, will never be infringed by any arbitrary measures, while he is capable of holding his situation in the university. He has, under several disadvantages, endeavoured conscientiously to do his duty, and he can proudly say, though it may seem a boast, that the interests of Greek literature in Scotland have not suffered in his hands.

(Signed) GEORGE DUNBAR.

Rose Park, 1st August, 1829.

Unto the Royal Commission,

The Representation of the REGIUS PROFESSOR of RHETORIC, in behalf of his Class, as a constituent part of the Curriculum.

Professor of Rhetoric.

In the provisional resolutions of the Royal Commission, their opinion respecting the rhetoric class is implied rather than expressed.

To that class no place has been assigned in the curriculum. It is not inserted among the new classes required as a qualification for the degree of Master of Arts with honours; and according to the more recent usage of the other Universities, the class of logic and metaphysics in this University is presented under a designation hitherto unknown, namely, as a class for logic and rhetoric. From these facts it has been inferred that the class of rhetoric is put into a state of abeyance for eventual abolition.

If this inference be just, the Professor takes leave to exercise, with deference but with earnestness, the privilege inherent in his chair, of submitting some considerations which may deserve to be weighed, before it is proposed to his Majesty to make such a resolution definitive.

He begins with offering a short notice of the origin and endowment of the professorship of rhetoric in this University, not ill calculated, as he conceives, to establish its importance as a distinct branch of academical instruction.

It is not unknown that, before the middle of the last century, the philosophical spirit had made considerable progress in Scotland, and was actively engaged in promoting the advancement of learning and science among the liberal youth of the country. The agitations of the year 1745 had scarcely subsided, when it occurred to some of the eminent men who took the lead in this work of improvement, that while logic, the scientific art of investigating and establishing truth, was taught at great length in the Universities, no attempt had been made in any of them to resolve the rules of criticism into those laws of our sensitive and intellectual nature of which they are the expressions, and thus to convert into science what had hitherto rested on the basis of authority. They distinctly apprehended the practical benefits which might be expected from such a course of inquiry, as directly calculated, in their judgment, to enlarge the bounds of intellectual philosophy, to cultivate the taste of scholars, to raise the character of literary works, and to extend the credit and influence of the nation.

The enlightened and indefatigable Lord Kames, to whose public spirit the literature of his country lies under many obligations, zealously exerted himself to devise the means of supplying what was considered as a defect in the philosophical course pursued in the Universities. Under his patronage Mr. Adam Smith, then entering into life, was encouraged to prepare a course of lectures on taste and composition; which he read in this city, for the first time in the winter of 1748. Of the merit of these lectures it were superfluous to speak. They opened new and instructive views of the origin and development of the faculty of taste, of the laws of emotion and passion, of the mechanism and progress of language, and of the scientific principles of design and execution in the different walks of literary composition. The powerful impression which they made, ensured a recompence most gratifying to the feelings of Mr. Smith, by obtaining for him, without competition, in the year 1751, the Chair of Logic in the University of Glasgow.

It certainly was not without hazard that a young and unproved scholar ventured upon the ground which Mr. Smith had occupied with distinguished reputation; but so great was the interest excited by this new department of study, that a successor soon appeared in the person of Mr. Watson, afterwards advantageously known to the world as the historian of Philip the Second. In this attempt, it is understood that Mr. Watson acquitted himself with ability, and obtained a fair portion of public favour. The Professor has not ascertained in what year he commenced his lectures, or how often he repeated them. They seem to have been delivered for the last time in the year 1758, the lecturer being shortly after promoted to the class of logic and rhetoric in the United College of St. Andrews.

By the advice of his friends, the attention of Dr. Blair was turned to this classical and popular branch of instruction. They had a principal share in establishing and upholding the Lectureship. They were anxious to see it placed on a public and permanent footing; and were satisfied that his genius and taste would do it complete justice. Thus prompted, Dr. Blair formed the plan of his course, and filled up the details with a judicious reference to the state of knowledge at the time, and to the general attain-

University of Edinburgh.

Remarks in Reference to the Provisional Resolutions.

Professor of Rhetoric.

ments of the students most likely to attend his class. Having received the consent of the Senatus Academicus, he began to read his lectures within the walls of the College on the 11th of December, 1759; and the respectable testimonies given in their favour, as a valuable addition to a system of philosophical instruction, induced the patrons to institute, in the following summer, a class of rhetoric, under his direction, as a component part of their academical establishment. The same views of utility which had guided the patrons, prevailed with his Majesty, on the 7th of April, 1762, to erect and endow a professorship of rhetoric in the University of Edinburgh, and to appoint Dr. Blair the Regius Professor.

Upwards of thirteen years had thus elapsed, from the first delivery of private lectures on rhetoric in the city, to the endowment of the professorship in the University. The subject had all that time been under the view of the soundest judges in matters of literature; and in making the appointment, the patrons consulted no personal or temporary interest, but the permanent benefit of the scientific education of the country.

It may be affirmed with some confidence, that few literary endowments ever contributed more speedily or more effectually to fulfil the intentions of the founders. To the studies and researches which the institution of the rhetoric class suggested or extended, may be ascribed that truly philosophical production of Lord Kames, the Elements of Criticism, the kindred Essay on Taste by Dr. Gerard, Dr. Campbell's Philosophy of Rhetoric, Mr. Burke's Essay on the Origin of our Ideas of the Sublime and Beautiful, and several of the Philosophical Essays of Mr. Hume—works which gave a strong impulse to philosophical inquiry, and had an effect in producing that state of knowledge, refinement, and literary reputation, of which we boast.

Among the benefits within the University, resulting from the introduction of the class, this may be regarded as one of some importance: that it enabled the professor of Logic to adjust, more completely than could be done before, the business of his department, and to relieve it of discussions lying beyond its immediate range, or liable to run into inconvenient length. Time was thus provided for giving greater comprehension to the leading doctrines of his course, and for illustrating more copiously their application to the discovery of truth, the conduct of reasoning and the laws of evidence. Competent judges have agreed that these changes have added materially to the usefulness of his lectures, by forming them into a great consistent whole, eminently fitted to prepare the student for the successful prosecution of every branch of science.

The duties assigned to the rhetoric class have in like manner been ascertained, and reduced to a system. They are directed to three objects—an exposition of the philosophy of taste, an induction of the principles of criticism, and an exemplification of the best means of applying them to the purposes of the composer and the critic.

These subjects furnish matter sufficient to occupy a full session, without trenching on the province of any other establishment. In their present form, and amidst the variety and importance of the discussions strictly pertaining to logic, they cannot be transferred to the Professor holding that chair. By such a transference, the interest of the one department or the other must be sacrificed; and even under the most judicious management, both would ultimately suffer. In fact, to be taught with a due regard to practical utility, the course of rhetoric, like that of logic, must be taught in a separate class: and how well qualified soever the same Professor might be for discharging the duties of both offices, it will not be denied by any person, acquainted with the actual state of the University, that scarcely any measure of industry or patience would enable him to do justice to the multitude of exercises to be examined and criticised in the two classes.

Of the value of the labours to which the rhetoric class is set apart, the Professor means to say little. He has no desire to point out the manner in which they contribute to heighten the pleasure and augment the power of the scholar, by leading him to refer whatever is just in thought or beautiful in language, or happy in design and execution, to those principles in the constitution of our nature to which they are accommodated, and by facilitating to him, of consequence, the means of reproducing them in his own writings. He is willing to confine his appeal to their unchallenged utility in a humbler sphere. Those who are familiar with literary works and the history of their authors, need not to be told, that there are few subjects connected with practical scholarship, in which general hints and scientific rules are of greater moment than in relation to the difficult art of composition. The fact is sufficiently established, not by the lighter but the graver literature of every country, that the discriminating powers of taste in regard to the choice and construction of language, the use of ornament, and the distribution of the parts of a comprehensive and complicated subject, are not always acquired by proficiency in erudition on one side, or in abstract science on the other. There are many proofs that such an acquirement is not the invariable result of long practice in writing, even upon metaphysical subjects where it is most needed. Through some prejudice, not very consistent with his general character, Mr. Locke undervalued the studies of rhetoric, and the effect of that prejudice is apparent in his works. "We might point out many passages," says Dr. Gerard, "in the Essay on Human Understanding, in which Mr. Locke has indulged both a tedious minuteness in the illustration of his subject, and unreasonable digressions from it."

The inadvertencies or blemishes, trivial in the days of Mr. Locke, and still unimportant when redeemed by equal talent and originality, might in the present times essentially injure the productions of ordinary writers. In the course of every session, the Professor has the satisfaction of seeing the remarkable progress made by some of his students, in the clearer perception of the power of words, in the neater structure of their sentences, the more judicious distribution of their matter, and the capacity of preserving unity of design in the discussions which they produce. To these points their attention is particularly directed; and it may be supposed, that in writing for the class, they consult them with greater care than is to be expected in exercises prepared for the other Professors, whose views are directed to different objects.

In adverting to the circumstances of the country and the genius of the age, it may safely be affirmed, that at no time was less room afforded for such a reduction of the means of intellectual improvement, as appears to be contemplated in the provisional resolutions. From the deep interest that has been directed to every form and mode of elementary instruction, from the unparalleled extent to which knowledge is diffused among all ranks of the people, and from the institutions daily rising for communicating to the working classes a measure of scientific training, formerly unheard of, a sort of necessity seems to be imposed upon scholars by profession, of proportionably extending the range and increasing the value of their acquirements. In the actual state of things, there seems to be no rashness in saying, that a period has arrived in the progress of our literature in which the great body of the students, sent from the remoter districts of the country and the middle ranks of life, need the benefit of the instruction communicated in the rhetoric class, more perhaps than that of any other of the subsidiary depart-

University of Edinburgh.

Remarks in reference to the Provisional Resolutions.

Professor of Rhetoric.

ments. In the higher walks of society, if the speculative doctrines of taste are not instilled into the minds of the young, its practical discernment at least forms part of their domestic discipline. As they grow up to manhood, they become familiar with the genius, and wit, and ridicule of their age—guides of great use in the pursuits of literature, as well as in the commerce of the world. This is the foundation of the remark so frequently repeated in the periodical criticism of France, that classical composition and finished works are to be expected only from authors living in the capital, and mingling freely with the higher circles. When traced to its source, the remark illustrates the truth here attempted to be established, that those scholars for whom there is no access to such seats of refinement, ought to have the benefit of that systematic information which supersedes their use, and is a far better, as well as safer guide, to the just, the elegant, and the beautiful, both in life and in literature.

This conclusion may be strengthened, perhaps, by another consideration, partly involved in what has just been stated: that the more popular the literature of a country becomes (without doubt its best attribute), the more does it require the watchful guardianship of pure taste and sound criticism. In descending to the regions of ordinary life, literary compositions are exposed to other influences than those of novelty and caprice. It might be deemed premature, if not invidious, to insinuate that the present times discover any symptoms of the undue operation of such causes. But this at least may be suggested, that it is prudent to foresee danger, and provide the means of preventing it. And the Professor will not conceal his conviction, that on this ground alone an argument might be urged, sufficient to satisfy both the patrons of learning and the judgment of the country, that it would have been expedient to introduce a class for rhetoric into this University, if it had not been previously established, and by consequence still more sufficient to uphold it as endowed, and promote its usefulness. The interests of the State are manifestly concerned in rescuing scholars from the fashions and prejudices of their day, and arming them with correct views of those unchanging laws of our nature, by which, as the legitimate standard, both the works of genius, and the judgments pronounced by critics must be tried.

With a few observations on another point, familiar in the experience of this University, and not without interest to the public, the Professor will take leave of a duty to which he did not expect to be called.

While it may frankly be admitted that Chairs endowed, but not taught, are a dead weight upon the roll of an University, and positively injurious to its character, it were a mistake to suppose that classes taught, but only thinly attended, are liable to the same imputation. Such classes (of which there are several in this University) generally of a subsidiary nature, and not required as a qualification for any of the learned professions, are left to the discretion or convenience of the students. They are subjected accordingly to the influence of temporary causes—depressed at one time below their level, and raised at another to great popularity; so that they cannot be said to be in continuance, either progressive or retrograde.

Of the causes of their thin attendance, one is obvious, and not easily controlled. From the quantity of work which the great body of the students have to perform in the progress of the Curriculum, from the slender resources upon which many of them contrive to meet its demands, and from the incessant labours of private teaching, by which others must provide the means of immediate subsistence, they are precluded from raising their thoughts above what is absolutely required of them. But let it not be taken for granted that they are placed beyond the reach of the benefit of the thinly-attended classes. The more interesting portions of the instructions delivered in such classes, are indirectly known to them. The books recommended by the professors are noted, and many of them acquire, by intense application, all the knowledge that could be derived from a public teacher. It deserves, indeed, to be recorded, to the honour of the more advanced students in this University, that they are acquainted with the plan of the courses of lectures delivered in the corresponding departments through the other Universities; and that whatever is new or interesting in the business of any particular chair, has an effect in awakening thought and directing study. There is no reason to suppose, that what is common here, is elsewhere unknown; so that it may truly be said, that the whole compass of the College instruction of the country is made tributary to the improvement of our academical youth. This observation, no doubt, applies equally to all classes regularly taught, and is not confined to that of rhetoric. But the fact certainly indicates the danger of taking away a constituent branch of instruction from any one of the universities. It is a momentous truth, that in the mechanism of literature, as well as of Government, the only problem fully resolved is this—that the effect of a sudden and great alteration in the wheels and pullies of an ancient and complicated machine, suited to the place which it occupies, and producing, amidst occasional irregularities and failures, results beneficial upon the whole, cannot be foreseen, and ought not therefore to be hazarded, but in a case of strong necessity.

Under a settled conviction of the usefulness of his class, the Professor of Rhetoric has, every year since his appointment, delivered his lectures, spread over a period of more than four months, for five days in the week. It is his purpose to continue the practice, while health allows. He foresees, however, that the provisional resolutions of the Royal Commission must operate both immediately and prospectively to his disadvantage. To this mortification and hardship, near the end of the 29th year of an incumbency, honestly devoted to his public duty, he does not pretend to be indifferent. But while he avows a just regard for the rights which he holds under his Majesty's Commission, he must be permitted to say, that he takes a deeper concern in the fate of the Rhetoric Class, as involving, in some degree, the credit of the University, and the interests of the education and literature of the country.

(Signed) Andrew Brown.

Larkfield, 7th August, 1829.

Remarks upon an Article in the Medical Course suggested by the Royal Commissioners for visiting Universities, relating to the Chemistry Class—humbly submitted to the Consideration of the Royal Commissioners, by Dr. Hope, Professor of Chemistry in the University of Edinburgh.

Remarks by Dr. Hope.

In the Medical Course proposed by the Royal Commissioners it is stated, that "Attendance on a "second course of chemistry will be required, but attendance for the second course with a private "lecturer, for a course of six months, will be permitted."

Considering the vast extent of the study of chemistry, and chemical pharmacy, and its intimate connexion with many branches of medicine, Dr. Hope begs leave to express his unequivocal appro-

University of Edinburgh.

Remarks by Dr. Hope.

bation of the proposal of the Royal Commissioners, to render two courses of chemistry imperative upon all graduates; but at the same time to state, that he is totally unable to discover, why attendance on a private lecturer should be permitted to qualify for a doctor's degree, in the department of chemistry alone.

The Royal Commissioners need not be informed, that chemistry is one of the branches of science which requires, for being taught successfully, ample and extensive apparatus, as well as spacious accommodations; and Dr. Hope has the satisfaction of thinking, that the University of Edinburgh possesses both to a greater extent than any private lecturer.

It may indeed be reasonably supposed, that this will at all times be the case, not only in the University of Edinburgh, but in the Universities of Scotland in general.

As any individual whatsoever may become a private lecturer on chemistry in Edinburgh, whether well qualified for the task or not; and as the professor is appointed by those who ought to select a fit person for the important duty, there is more than an equal chance that the professor shall be a superior teacher to the ex-lecturers in general.

Should a second course of chemistry be rendered imperative, upon the footing proposed by the Royal Commissioners, there would unquestionably be created a strong inducement for private lecturers to deliver courses at a reduced fee, for the purpose of attracting those students whose finances may be limited; and who may be more influenced in the choice of a teacher by the amount of the fee, than the value of the instruction.

Dr. Hope humbly conceives, that the only circumstance which might render it advisable at any time to permit the second course to be a private one, is, when a professor, whether from ignorance, negligence, or bad health, gives an imperfect course; and when there is some eminent private lecturer on the same subject, who gives a good one.

The present Professor of Chemistry trusts that, without incurring the imputation of vanity, he may flatter himself, that ever since Edinburgh could boast of possessing a celebrated medical school, there has not existed such deficiency in the teaching of chemistry, as to require the admission of private lecturers into the Curriculum for a medical degree.

No one will presume to call in question the transcendent merits of Dr. Black, as a teacher of chemistry; since in him were combined the most profound knowledge of his subject, and the happy talent of communicating that knowledge, in a clear and elegant diction, with equal skill in contriving and performing the necessary experiments.

Though without the smallest pretensions to the merits of his predecessor, Dr. Hope is willing to believe that the large number of his pupils, amounting, on an average of many years, to five hundred, and that during a period when he had the rivalship of very able extra-academic lecturers, affords a proof of the most decided description, that the chemical class has been taught by him to the satisfaction of the students.

Possessing this gratifying testimony in his favour, Dr. Hope must be excused from expressing his disappointment, that the Royal Commissioners should deem it proper to permit attendance on private lecturers in the case of chemistry alone, thereby doing, as he imagines, special injustice to the professor, and creating the idea, that in the teaching of his class there exists some imperfection, which has called for the proposed relaxation from the general rule, viz., "That academic attendance alone should be "admitted to qualify for academic honours."

(Signed) Thos. Charles Hope.

Edinburgh, July 30, 1829.

Observations on the Provisional Resolutions, presented (26th August, 1829) to the Commission, by the Professor of Mathematics, Edinburgh.

Professor Wallace.

The Faculty of Arts having reserved to each of its members the privilege of stating in what manner the changes proposed in the provisional resolutions of the Royal Commission will affect his own Chair, I beg leave most respectfully to submit the following observations, on the effect which I believe will be produced on the Mathematical Chair, and the study of the mathematical sciences.

It is proposed, that before a student can enter the first mathematical class, he must pass an examination in the first six books of Euclid's Elements. From the words of this resolution I infer, that hereafter the science of geometry, as far as it is contained in the first six books of Euclid's Elements, is no longer to be taught in the Scottish Universities.

The spirit of this resolution is so much in opposition to the notions which have been entertained by all men of learning and sound judgment, for the last two hundred years, that I have doubts whether I rightly understand the exact import of the resolution.

The mathematical sciences, in comparison with other branches of learning, are proverbial for their difficulty; and, as far as their study is carried in the Scottish Universities, geometry is not the least difficult. To make proficiency, the student must possess a vigorous mind, and a habit of attention and abstraction. The mere exercise of memory, which is sufficient for the acquisition of a language, will not greatly avail him, unless accompanied by the continual exertion of his reasoning faculties.

If there be any branch of human knowledge fitter than another to be taught in the universities, I believe geometry deserves the preference. An imperfect knowledge of its elements is all that can be expected in our parish schoolmasters. Few have any relish for their study, and almost none have any inducement to prosecute that study. It may be supposed otherwise in the universities. No man can, or ought to obtain the office of a professor, who has not a decided taste for the science or branch of knowledge which he is to teach, who does not pursue its study with enthusiasm, and who has not given proofs of the success of his exertions.

By the proposed resolution, the extensive knowledge which a professor has, by laborious study, acquired of his science, and his experience in communicating it to his pupils, are to be laid aside as useless, and their place supplied by the imperfect knowledge which a parish schoolmaster may have of the subject—who has less inducement to study geometry than anything else, because he has less opportunity of turning it to account, and who, from the small demand for this branch of instruction, can never have the benefit of experience.

Supposing the fact to be, that the elements of geometry are no longer to be taught in the Scottish Universities, it is surely a bold experiment which the Commission have recommended. The elements have been taught in the Scottish Universities by the Gregorys, by Maclaurin, by Simson, and by Stewart. I am certain, not one of these ever imagined that he was doing what ought rather to have

9/63

University of Edinburgh.

Observations on the Provisional Resolutions, by Professor Wallace.

been done by a parish schoolmaster. Nothing of the kind recommended by the Commission has been done in the British dominions, nor, as far as I know, in any foreign university. We know that the elements have always been taught in the Scottish Universities, in the Universities of Oxford, Cambridge, and Dublin, and that they are taught in the lately-erected University of London.

The study of the mathematical sciences, and, in particular, geometry, may serve three important purposes:—

1. A slight knowledge of their principles, joined with an acquaintance with certain practical rules, may enable artisans to erect buildings, and construct many implements for convenience and comfort in life. They are also sufficient for the architect, the land-surveyor, and even the navigator. The ordinary wants of these may be satisfied by what can be taught by properly educated parish schoolmasters.

2. A more extended knowledge of geometry will enable the student to prosecute the study of mechanical philosophy and astronomy; but this, I am certain, can never be obtained in the parish schools. To make it solid and consistent, it must be begun and completed in the universities, under the direction of professors, whose whole time and studies are given to instruction in their particular science.

3. There is yet another, and not the least important purpose, to be served by the study of geometry. When pursued according to the strict method of the ancients, it serves as the noblest and most powerful exercise of the intellectual powers. With this view it has been introduced into the universities; and if it is excluded, a deep injury will have been inflicted on the system of education in Scotland.

There is an inconsistency in the proposal of teaching the first six books of the Elements out of the University, and the eleventh and twelfth books, together with plane trigonometry and the elements of algebra, and many other theories, in the University. The eleventh and twelfth books are seldom if ever entirely taught at present. The prolixity of some parts of the twelfth, induces instructors to sacrifice the rigour of ancient geometry to the more simple theories of modern invention. What is really taught of the eleventh and twelfth, is less difficult than the first six books. The fifth book, in which a student is to be examined before he enter the mathematical class, is greatly more difficult than anything he is likely to study in the University.

If the facility of execution were an object, then the teaching the elements in the University, and the applications out of the University, would be a less objectionable measure than that proposed. As the thing is ordered, the schoolmaster has the onerous duty; that of the professor is easy and pleasant.

It may have been supposed that, by tasking the student with the acquisition of the elements of geometry out of the University, he will prosecute the study of higher branches farther than otherwise he would have done. This may be true with a few, but the greater number of students would be well satisfied with the elements of geometry alone. The difficulty of acquiring these, to many, is considerable. With the elements of algebra in addition, and other branches taught in the second mathematical class, the student is well prepared for the study of natural philosophy; and to induce him to go farther, he must either have formed a taste for the science, or he must have some stronger stimulus than any offered in the Scottish Universities.

I have taken much pains to excite a taste for the more recondite theories of mathematics, by giving courses of lectures to very small classes, for a very trifling pecuniary recompense. My success has certainly not been inferior to that of my predecessors, but it has not been considerable.

In the course of ten sessions I have taught—

The elements of geometry to .....891 students.
Algebra, &c. (in second class) to .....683 „

And in seven sessions—

The differential calculus (in third class) to ....107 „

It appears, then, that out of the whole number, viz., 1681, only one in sixteen has been disposed to study the higher geometry. I may add, that no more than 78 out of the 107 paid fees, the remaining 29 were invited, or allowed to attend, with a hope of exciting a taste for a branch of knowledge, the invention of which has made an era in the history of science.

I need not be ashamed of the small average yearly number (fifteen), when I mention the fact, that in the city of Paris, Lacroix (the author of the most extensive treatise on the subject) had not a greater number attending his gratuitous courses. I also know that Biot had not more than twenty attending his lectures on the figure and magnitude of the earth. I have not been able to obtain even five as a third class, willing to pay a fee, these two past sessions; with that number I was willing to proceed. I trust it will be believed, that pecuniary emolument was not my object in making the fee a condition of attendance. I did so, because I know well, that what costs nothing, is held to be of no value.

I may here notice an inconsistency in two of the resolutions. By one, such students as have attended the first and second mathematical classes, are to pay one guinea when attending the third; and by another, students who have attended the first and second classes of a professor in the Faculty of Arts, are to pay nothing for the third. With such third classes as I have had, it must be a matter of indifference whether a professor receives a guinea or nothing. The latter resolution seems to be the better of the two, because there is more dignity in teaching a science purely for the pleasure of the thing, than for the paltry recompense offered by the other resolution.

There is one view of the resolutions which I have not yet taken, namely—the effect they will produce on the emoluments of the chair.

The salary of the Professor of Mathematics in this University is exactly as it was in the year 1682. This is paid by the Patrons; but 30*l.* was added about the time of Queen Anne. Altogether it is about 113*l.* It has however happened, that professors of mathematics have never received any salary. The late Dr. Ferguson and Mr. Playfair were joint professors. The former received the salary, and the latter had merely the class-fees during the twenty years he held the chair. Again, Mr. Leslie was associated with Dr. Ferguson, from 1805 to the time of his demise in 1816, on the same terms. It will easily be believed, that these eminent men were not too highly rewarded for their exertions. I might have first mentioned, that Maclaurin was exactly in the same state. He was appointed to the chair in 1725, but his colleague, James Gregory, received the salary until his death, about the year 1742, or thereby. It appears, then, that ever since the establishment of the Mathematical Professorship, it has seldom happened that the person doing the duty has received the salary.

University of Edinburgh.

Observations on the Provisional Resolutions, by Professor Wallace.

What has happened so often, may be supposed to happen again. The emoluments, at the most very moderate, may be reduced barely to the class fees: therefore any measure which tends to diminish them, must do a serious injury to the Professor, and may render the chair not worth the acceptance of a person qualified to discharge properly its duties.

Should the proposed regulations of the Commission, by which the Professor shall be deprived of the power of teaching the Elements of Geometry, be carried into effect, I am quite certain that the number of students will be greatly diminished. The first class (viz. those studying the Elements of Geometry) is the most numerous. The emoluments of this of course will cease. I also believe, that the system of examination would prevent many from entering the tolerated class. On the whole, I fear that the Professor of Mathematics would pay dearly for an experiment hitherto untried, which seems to promise no visible advantage, and which will deprive him, not only of the reward of his labour, but also of the power of doing what he believes to be his duty.

And here I beg most respectfully farther to observe, that I hold the office of Professor of Mathematics by a commission from the patrons of the University. By this I am bound, by an express agreement, to teach the mathematical sciences at the customary times and place; and the patrons, on the other hand, are obliged to pay to me the established salary of the office. There can be no question what branches I am expected to teach: I must be guided by the universal opinion of mankind, and the practice of my predecessors. At this moment, were I to omit the Elements of Geometry, and substitute for them any other branch, however important, the patrons might justly charge me with a breach of duty. It would be absurd to pretend, that by some new view of the mathematical sciences, the Elements of Geometry were now to be excluded from universities. I would be told, that I must teach the *Mathematics* according to the common acceptation of the term, and as it was understood when I was appointed to the office.

I apprehend there is no fallacy in this reasoning. My duty to the patrons, or rather the community, requires that I should protest against any innovation which appears to me injurious to the public good. I may be wrong, but my motive must obtain for me the respect and sympathy of that body which entrusted me with the instruction of youth in the mathematical sciences.

I cannot help remarking, that while the entrance into the mathematical class is shut against every one who does not bring with him as much knowledge of the mathematics as many carry from the University, there is to be no previous examination of those who enter on the study of Natural Philosophy. The important fact, that without Mathematics no one is qualified to study Natural Philosophy, might have led to a belief that some preparation was wanted for that class. I am far from suggesting that such a bar ought to be put in the way of the study of the physical sciences, but surely it was more necessary than in the case of the mathematical class.

In conclusion, I beg leave to correct an erroneous impression which has been made on the public mind by interested persons. It is, that there is no instruction given on *Practical Astronomy* in the University of Edinburgh.

Now, it will readily be admitted, by any one competent to give an opinion, that Spherical Trigonometry and its applications constitute the most important part, and indeed the whole of *Practical Astronomy*. I have every year taught Spherical Trigonometry. Last session, I lectured five days in the week, from the beginning of March to the end of the session, at an additional hour, on this subject; moreover, I put instruments into the hands of the students, and explained to them their use. In doing this, I taught the essential part of Practical Astronomy to as many of my second class as I could induce to attend me, without any recompense besides the satisfaction of having performed an important duty.

I am aware that this subject does not enter into the provisional resolutions; but I have seen one or more pamphlets, addressed to the Commission on this very subject, wherein my exertions in this matter have been overlooked or misrepresented.

(Signed) WILLIAM WALLACE.

REPORT—Mr. BARON HUME to the Commission of Visitors of the College of Edinburgh.

Report of Mr. Baron Hume.

1. *Roman Law.*—I incline to think, that the Roman Law ought not to be taught, as hitherto it has ordinarily been, in two separate courses or classes—one for the *Institutes*, the other for the *Pandects;* and that the Professor ought to make a selection of the proper titles and chapters from those two compilations, which, in truth, form but one system of law, and should comment on that selection to one class, and for one session only. I should think, that two hours weekly is quite a sufficient allowance of time for examinations and exercises.

2. *Law of Scotland.*—I think it very clear, and indeed know from my own experience, that a *complete* course of lectures on the Law of Scotland cannot be delivered in one session; and I am of opinion that two sessions of six months each (commencing on 12th of November—meeting *five* days weekly—and allowing eight days' vacation at Christmas) are not more than sufficient for going thoroughly, and to the best advantage, through the entire civil system.

But there is some difficulty of arranging this matter. If, as proposed in the scheme which has been communicated to me by the Honourable Commissioners, the Professor has to lecture *two* hours *daily*, besides giving *four* hours *weekly* for examinations, he must be a person who has entirely withdrawn from practice at the Bar, and attendance on the Court; in which case he must be, or at least will soon become, imperfectly qualified for the duties of teacher. Besides, I do not see that the writers to the signet, solicitors, procurators, &c. whose clerks and apprentices are nine-tenths of the students of Scotch Law, can possibly dispense with the attendance of those young gentlemen for so many hours at their chambers.

Another arrangement is, to divide the entire course of lectures into *moieties*, of which one shall be delivered in the first Session, and the other in the second—the professor lecturing but one hour daily. This would obviate the inconveniences above taken notice of; but, on the other hand, this scheme would be subject to this disadvantage, that those young men who come to Edinburgh from the country and the provincial towns for one winter only, and are employed there as clerks, book-keepers, &c. for the season, could only have the benefit of half a course of lectures. There are numerous students of this description; and it is desirable, both to them and the country, that they should receive sufficient instruction. It would also materially lessen the professor's emoluments, if this branch of his fees were cut off.

It does not occur to me that there is any third arrangement of a practicable nature. It will belong

9h5
University of Edinburgh.

to the Commissioners to decide between the two schemes above mentioned, whether the disadvantages of the one or the other outweighs. My own judgment is certainly in favour of the second scheme, though it obliges the young men from the country to come to Edinburgh for two successive sessions. In this there is no material prejudice, and it is what many of them do at present.

Reported to the Commission by (Signed) DAVID HUME.

George-street, 27th December, 1828.

N.B.—I ought to have mentioned, that, in my two first sessions, as Professor of Scotch Law, I set aside a separate hour, weekly, for examinations; but I was obliged to desist from this scheme, finding that but a small proportion of the class would attend at that hour. In a class of two hundred, or thereby (which the class of Scotch Law now amounts to), that task cannot return frequently to any individual. I think it very questionable whether the thing can be done to any substantial advantage.

LETTER from PROFESSOR BELL, to the Solicitor-General.

15, *Queen-street, 23rd January*, 1830.

Professor Bell.

MY DEAR SIR,—When I was examined before the University Commission, I expressed my disapprobation of the system of examination, as applied to students so advanced as most of those in the class of Scottish Law; and in the close of the Report of the Law Faculty, I used the freedom of recommending a reconsideration of the subject on the part of the Commissioners.

I feel it to be my duty now (as I told you last day in conversation), to retract my former opinion, and heartily to concur in the recommendation by the Commissioners. And perhaps it may not be improper to explain to you how this conviction has arisen.

During last summer, I received a visit from my brother, Mr. Charles Bell, Professor of Physiology and Surgery in the University of London, and was well pleased to have the opportunity of a full discussion of the matter with one whom I knew to have had great experience, and to have observed carefully the best methods of instruction, during a course of public teaching of nearly thirty years. He so strongly expressed his conviction of the benefit which his pupils had derived from examination, that I resolved to try the experiment; and I have now the satisfaction of saying that I have found it attended with eminent advantages.

The advantages seem to me chiefly to be these:—

1. That the students are compelled to study the several points of the doctrine delivered to them, so as to make the knowledge which they acquire their own, instead of acquiescing tamely in what they hear, or read; for which purpose, I place them under the necessity of explaining the principle, and showing the application of the rule, as tried by the test of decided cases.

2. That in these examinations I have the means of observing where any of those difficulties or obstructions to the thorough understanding of the doctrines may lie concealed, which so often impede the course of a retired student; which he can find no means in books to remove; and which, in a formal lecture, a professor is apt to overlook. The revisal of my lectures in this way, as reflected from the minds of the students, gives me an opportunity of removing difficulties under which a young man might otherwise be left to struggle; supplying any defects in my more formal lecture; and giving, familiarly and colloquially, hints, exhortations, encouragements, and lessons in study, which otherwise might not have suggested themselves.

3. That in putting cases to be resolved by students, and requiring them to explain or apply the rule or principle, to describe the proper action, or point out the remedy, I find numberless opportunities of delivering occasional lectures—explaining the less obvious relations and combinations of doctrines—and drawing together views of conflicting interests, without which a lawyer never can be fit for his professional duties. The greatest difficulty, perhaps, which a professor of the science of Civil Jurisprudence has to encounter, is that of explaining any one part of the system without presupposing some considerable knowledge of other parts of it. And I have found no course so effectual, none which so well reconciles the simplicity required in an elementary system of lectures, with the necessary anticipations of doctrines not yet formally discussed, as this plan of examination, interspersed with occasional explanations for the clearing away of difficulties. Without disturbing the natural arrangement of the system of lectures, or distracting the attention of the student intent on following out the train of principles, I find in this method of auxiliary instruction opportunities of conveying very useful collateral information; and of giving such explanations as the obvious difficulty of the student under examination may require, with the unspeakable advantage of its being supplied to him at the very moment when he finds it to be a necessary step in his process of thought, while labouring to resolve the question presented to him—the rest of the class most probably participating in the same difficulty under which he is labouring.

These are some of the chief advantages, with a complete conviction of which I am impressed by the short experience that I have already had. There are many others too obvious to require enumeration here—and although I have found a considerable reluctance, as I anticipated, on the part of more advanced students, to take any part in examinations—and have been under the necessity (from the great extent of the course) of taking an extra day, which the occupations of many of the students can ill afford; I have to report my entire satisfaction with the proposal of the Commissioners, and my conviction, that examination will form a most useful addition to the system of public instruction.

I ought to apologize for so tardy an expression of my assent. But perhaps it is the stronger as being the result of a very anxious experiment by one much prepossessed against the plan.

May I beg you to do me the honour of making such communication to the Commission as you think fit on the occasion. And believe me, my dear Sir,

Yours, faithfully, (Signed) GEORGE JOS. BELL.

The Solicitor-General.
